important one of these after site selection is that of orchard design. The selection of suitable cultivator and rootstock combinations is the starting point for ongoing tree training and pruning which will continue for the life of the orchard. The days of large size fruit trees producing a tonne or more of each fruit are gone forever - a modern orchardist cannot afford to wait for the trees to grow very large, and the production costs of fruit on large, old trees is very high. Acceptance or rejection of any edible commodity, whether it is raw or processed, is usually conditioned by sensory stimuli. The impact of these stimuli on the decision-making process is broadly termed sensory evaluation. Advances in sensory evaluation research have been slow in the past because of the human factor—the necessity to use

highly trained sensory panels to conduct this research. High technology instrumentation and new understandings of sensory evaluations are now combining to make possible quantum jumps forward in sensory evaluation research. It is widely recognized that the sensory aspects of fruits and vegetables are affected by many factors, among them environment, variety, cultural practices, and handling practices. However, if one attempts to find a general reference or compilation of findings regarding this subject area there seems to be few, if any, available. A survey of the literature does suggest that in the past few years research into specific factors which influence the sensory aspects of fruits and vegetables has increased significantly. This increased interest in sensory research and the renewed national awareness of the value of research into pre and postharvest quality of fruits and vegetables prompted the Flavor Subdivision, Agricultural and Food Chemistry Division, American Chemical Society to sponsor a symposium entitled "Sensory Evaluation of Fruits and Vegetables: Effect of Environment, Cultural Practices and Variety" during the 1982 meeting in Kansas City, Missouri.

"Updated and revised to keep pace with developments, the third edition of Grape Grower's Handbook: a Guide to Viticulture for Wine Production is meant to be a stand-alone publication that describes all aspects of wine grape production.
