members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

A tour through the groundbreaking science behind the enigmatic, but crucial, brain developments of adolescence and how those translate into teenage behavior The brain creates every feeling, emotion, and desire we experience, and stores every one of our memories. And yet, until very recently, scientists believed our brains were fully developed from childhood on. Now, thanks to imaging technology that enables us to look inside the living human brain at all ages, we know that this isn't so. Professor Sarah-Jayne Blakemore, one of the world's leading researchers into adolescent neurology, explains precisely what is going on in the complex and fascinating brains of teenagers--namely that the brain goes on developing and changing right through adolescence--with profound implications for the adults these young people will become. Drawing from cutting-edge research, including her own, Blakemore shows: How an adolescent brain differs from those of children and adults Why problem-free kids can turn into challenging teens What drives the excessive risk-taking and all-consuming relationships common among teenagers And why many mental illnesses--depression, addiction, schizophrenia--present during these formative years Blakemore's discoveries have

The updated edition of the bestselling book that has changed millions of lives with its insights into the growth mindset “Through clever research studies and engaging writing, Dweck illuminates how our beliefs about our capabilities exert tremendous influence on how we learn and which paths we take in life.”—Bill Gates, GatesNotes After decades of research, world-renowned Stanford University psychologist Carol S. Dweck, Ph.D., discovered a simple but groundbreaking idea: the power of mindset. In this brilliant book, she shows how success in school, work, sports, the arts, and almost every area of human endeavor can be dramatically influenced by how we think about our talents and abilities. People with a fixed mindset—those who believe that abilities are fixed—are less likely to flourish than those with a growth mindset—those who believe that abilities can be developed. Mindset reveals how great parents, teachers, managers, and athletes can put this idea to use to foster outstanding accomplishment. In this edition, Dweck offers new insights into her now famous and broadly embraced concept. She introduces a phenomenon she calls false growth mindset and guides people toward adopting a deeper, truer growth mindset. She also expands the mindset concept beyond the individual, applying it to the cultures of groups and organizations. With the right mindset, you can motivate those you lead, teach, and love—to transform their lives and your own.
