Traditionally the term public finance has been applied to the package of those policies and operations which involve the use of tax and expenditure measures, while budgetary policy is an important part to understand the basic problems of use of resources, distribution of income, etc. There is a vast array of fiscal institutions tax systems, expenditure programmes, budgetary procedures, stabilization instruments, public debt policies, level of government, etc., which raise a spectrum of issues arising from the operation of these institutions. Further, the existence of externalities, concern for adjustment in the distribution of income and wealth, removal of poverty, etc., require political process for their solutions in a manner which combines individual freedom and justice. The problem of allocation of resources between public goods and private goods is a perennial problem. Then in a democracy there is a political process of voting to decide about the budgetary policy to be adopted. Therefore, now more attention is paid to a wider coverage of government activities relating to financial aspects and the subject is known as public economics. The present book is an excellent presentation of fiscal institutions and a careful analysis of the issues underlining budgetary policies in general and Indian experience in particular. Based on the curriculum prescribed by the University Grants Commission (UGC), it ideally caters to the academic needs of postgraduate students of public economics. Apart from the traditional topics of public finance, i.e. taxation, public expenditure, public debt, fiscal policy, federalism, etc., the book contains chapters on public sector vs. private sector, theory of public choice and changing perspective about the role of the government. Special focus of the book is on Indian public finances including the fiscal crisis of 1991 and fiscal sector reforms.

It's no secret that certain social groups have predominated India's business and trading history, with business traditionally being the preserve of particular 'Bania' communities. However, the past four or so decades have seen a widening of the social base of Indian capital, such that the social profile of Indian business has expanded beyond recognition, and entrepreneurship and commerce in India are no longer the exclusive bastion of the old mercantile castes. In this meticulously researched book – acclaimed for being the first social history to document and understand India's new entrepreneurial groups – Harish Damodaran looks to answer who the new 'wealth creators' are, as he traces the transitional entry of India's middle and lower peasant castes into the business world. Combining analytical rigour with journalistic flair, India's New Capitalists is an essential read for anyone seeking to understand the culture and evolution of business in contemporary South Asia.

The biotechnology business in India with an increase from USD 500 million in 1997 and reaching an estimated USD 1 billion next year health related products accounting for 60%, agro and veterinary products together 15%, and contract R&D, reagents, devices and supplies adding up to the remaining 25% of which the diagnostics share was about 10% of the total surely presented an encouraging picture even five years ago. While volumes have increased, the pattern has not. According to a report, prepared by McKinsey & Co, India's Pharmaceutical industry including domestic and export sales and contract services totals nearly USD 5 billion. Furthermore, the company optimistically projects the growth to a factor of five fold only if both the industry and the government are able to put in place achievable solutions that must take care of the formidable obstacles preventing further growth. If this assessment is correct, then the established transformation made by IT growth should also provide the confidence required by the high expectations for biotechnology which have arisen in the country in recent years. Some contributors to this are overenthusiastic these are bureaucrats, some retired scientists and of course the complacent politicians who have the least knowledge of what the new biotechnology is all about. However, there are clear indications of biotechnology growth demonstrated by a few but rapidly expanding biotech companies such as Biocon Ltd, Shantha Biotech (P) Ltd, Dr.
