This book collects recent work presented at the 31st IPMA Congress, which was held in Merida, Mexico, from September 30th to October 2nd, 2019. It covers a range of project, programme and portfolio management contexts, with the general aim of integrating sustainability into project management. The book is structured into three parts. The first part covers concepts and approaches related to the integration of sustainability in project management. The second part presents research on integrating sustainability into project management in different industries and regions. The final part takes specific perspectives on integrating sustainability into project management related to learning and continuing competence development. The book offers a valuable resource for all researchers interested in studying the emerging trends in incorporating sustainability in project, programme and portfolio management.

This book presents the latest tools, techniques, and solutions that decision makers use to overcome the challenges faced by their sustainable supply chains. Given the ever increasing significance of socio-economic and environmental factors, the management of sustainable supply chains has become a complex and dynamic task. Multiple and conflicting objectives of stakeholders including suppliers, manufacturers, service providers, and retailers add to the complexity of decisions that modern day managers of supply chains face. With the unprecedented technological developments and innovations at hand, sustainability can be maximized for all the activities of a supply chain including: service concept and product design, material sourcing and procurement, manufacturing processes, delivery of the final product, and end-of-life management of the product. Consequently, the sustainable supply chains' problems require a systematic and integrated approach. Modeling and simulation, in general, as well as system dynamics and agent-based modeling, in particular, have the capabilities to deal with the complexity of sustainable supply chain related problems. This book will appeal to professionals and researchers in the field.

Addresses issues relevant to an understanding of the innovation journeys on which public organizations have embarked. If public innovation is defined as a necessary condition for establishing meaningful interactions between the government and society what are the relevant issues that may explain successful processes and forms of public innovation?

The Public Administration Select Committee (PASC) has concluded a year-long inquiry into the future of the Civil Service with only one recommendation: that Parliament should establish a Joint Committee of both Houses to sit as a Commission on the future of the Civil Service. It should be constituted within the next few months and report before the end of the Parliament with a comprehensive change programme for Whitehall with a timetable to be

implemented over the lifetime of the next Parliament. The Report considers the increased tensions between ministers and officials which have become widely reported, and places the problems in Whitehall in a wider context of a Civil Service built on the Northcote-Trevelyan settlement established in 1853 and the Haldane principles of ministerial accountability set out in 1919. The government's Civil Service Reform Plan lacks strategic coherence and clear leadership from a united team of ministers and officials. The Northcote-Trevelyan Civil Service remains the most effective way of supporting the democratically elected Government and future administrations in the UK. Divided leadership and confused accountabilities in Whitehall have led to problems: a low level of engagement amongst civil servants in some departments and agencies, and a general lack of trust and openness; the Civil Service exhibits the key characteristics of a failing organisation with the leadership are in denial about the scale of the challenge they face. There is a persistent lack of key skills and capabilities across Whitehall and an unacceptably high level of churn of lead officials, which is incompatible with good government.

Project management (PM), as a discipline, has been undergoing an incremental inclusion of theories, techniques, and processes from fields related to organizational behavior. Parallel to this has been the dominance of Information Technology (IT) projects within the field of Project Management. Information Technology as a Facilitator of Social Processes in Project Management and Collaborative Work provides emerging research that bridges the gap between IT and project management. While highlighting the importance of Information Technology and the social process of work, the readers will learn how project management applies techniques to achieve objectives through IT projects. This book is an important resource for project managers, executives, IT managers, consultants, students, and educators.

Over the past two decades, there has been a shift of paradigm in public administration and public sector accounting around the world with the increasing emphasis on outcomes as opposed to inputs and outputs focus. Understanding of how government departments and agencies develop and implement outcomes-based approaches to their services and programs to strengthen public accountability, financial scrutiny and good governance worldwide is limited.

Covering a selection of international practices on outcomes-based approaches to government departments, agencies and public higher educational institutions in developed economies, this comprehensive compilation provides an essential reading in the public sector accounting, accountability and performance management field. The contributions are grouped into three jurisdictions: Australasia, UK and Europe, and North America. It incorporates outcomes-based practices in public services from advanced economies and will be of significant interest to global public sector regulators, consultants, researchers, and academic communities as well as academic researchers in public administration and development studies fields. The insights offered by a country-specific

practice will also be useful to governments in other countries implementing similar systems and practices and facing similar socio-political environments. This book will also help to gain an understanding of the issues of government accountability from a management point of view as well as from a socio-political point of view.

The field of cultural heritage is no longer solely dependent on the expertise of art and architectural historians, archaeologists, conservators, curators, and site and museum administrators. It has dramatically expanded across disciplinary boundaries and social contexts, with even the basic definition of what constitutes cultural heritage being widened far beyond the traditional categories of architecture, artifacts, archives, and art. Heritage now includes vernacular architecture, intangible cultural practices, knowledge, and language, performances and rituals, as well as cultural landscapes. Heritage has also become increasingly entangled with the broader social, political, and economic contexts in which heritage is created, managed, transmitted, protected, or even destroyed. Heritage protection now encompasses a growing set of methodological approaches whose objectives are not necessarily focused upon the maintenance of material fabric, which has traditionally been cultural heritage's primary concern. The Oxford Handbook of Public Heritage Theory and Practice charts some of the major sites of convergence between the humanities and the social sciences, where new disciplinary perspectives are being brought to bear on heritage. These convergences have the potential to provide the interdisciplinary expertise needed not only to critique but also to achieve the intertwined intellectual, political, and socioeconomic goals of cultural heritage in the twenty-first century. This volume highlights the potential contributions of development studies, political science, anthropology, management studies, human geography, ecology, psychology, sociology, cognitive studies, and education to heritage studies.

examine the main areas of importance for public sector leaders; they have been grouped into four distinct categories: strategic management, organisational performance, e-government and national identity. The objective of "Critical Thoughts From A Government Perspective" is to: help augment recent public sector development efforts in the GCC; contribute to the advancement of research on the GCC; and serve as knowledge building tools for those interested in learning about public sector management practices in GCC countries. Key Features Many books about the GCC governmental sector are typically written from either a purely academic perspective or present a small subset of available research, thereby failing to capture critical management issues and considerations. Therefore, "Critical Thoughts From A Government Perspective" not only embodies insights based on extensive research but also the collective insights of numerous senior government practitioners. "Critical Thoughts From A Government Perspective" has been written from a philosophical 'mind-set' in the sense that if we need to improve our organisations and thereafter our nations, we need to be transparent when we share knowledge and practices. "Critical Thoughts From A Government Perspective" is easy-to-read and is highly practical. The Author Dr Al-Khouri is the Director General (Under Secretary) of the Emirates Identity Authority: a federal government organisation established in 2004 to rollout and manage the national identity management infrastructure program in the United Arab Emirates. Contents Strategic management Public value and ROI in the government sector Strategy development at Emirates Identity Authority Targeting results: lessons learned from the UAE National ID Program Re-thinking enrolment in identity card schemes Organisational performance Improving organisational performance through understanding human motivation Succeeding with transformational initiatives E-government Supporting e-government progress in the UAE National identity Population growth and governments' modernisation efforts: the case of GCC countries Modern projects are all about one group of people delivering benefits to others, so it's no surprise that the human element is fundamental to project management. The Gower Handbook of People in Project Management is a complete guide to the human dimensions involved in projects. The book is a unique and rich compilation of over 60 chapters about project management roles and the people who sponsor, manage, deliver, work in or are otherwise important to project success. It looks at the people-issues that are specific to different sectors of organization (public, private and third sector); the organization of people in projects, both real and virtual; the relationship between people, their roles and the project environment; and the human behaviours and skills associated with working collaboratively. Thus this comprehensive and innovative handbook discusses all the important topics associated with employing, developing and managing people for successful projects. The contributors have been drawn from around the world and include experts ranging from practising managers to academics and advanced researchers. The Handbook is divided into six parts, which begin with management and project organization and progress through to more advanced and emerging practices. It benefits hugely from Lindsay Scott's expert knowledge and experience in this field and from Dennis Lock's contributions and meticulous editing to ensure that the text and illustrations are always lucid and informative.

In the industrial world, companies are always seeking competitive advantages to sustain themselves in the globalized market. A supply chain is one of these improvements that managers implement in order to stay ahead of the competition. However, certain methods of supply chains add risks such as the addition of costs, possible accidents, and economic losses. Because of this, companies are looking for techniques in which to progress their supply chain execution. *The Handbook of Research on Industrial Applications for Improved Supply Chain Performance* is a pivotal reference source that identifies techniques, tools, and methodologies that can improve supply chain performance and enable businesses to generate a competitive advantage in the globalized market. While highlighting topics such as material flow, route optimization, and green distribution, this publication is ideally designed for managers, executives, logistics engineers, production managers, warehouse operations managers, board directors, consultants, analysts, inventory control managers, researchers, academicians, industrial and managerial professionals, practitioners, and students looking to improve costs and quality of supply chains.

There has been a profound change within the sphere of government and societal regulation in recent years. Traditional hierarchical government has been challenged by new governance instruments relying on negotiations instead of command and control. Alongside this development there has been a change in the time-framing of politics and steering. Traditional politics implicitly has been based on stability and permanence while new forms of governance explicitly are based on just-in-time actions such as projects and issue-based collaborations in networks and programs. This book analyses the implications of this shortening of time frames, focusing particularly on spatial policy interventions. Spatial policies have a special relevance when it comes to governance and new forms of societal steering. On the one hand, the local (geographical) level in politics is the principal battleground for the struggle between top down and bottom up approaches and aspirations. On the other hand, many of the most burning issues of our time require a global, strategic approach, for example, climate change, resource depletion, population growth are anchored in space and the physical world. Whether and how short-term spatial approaches can achieve sustainable development outcomes is thus a critical question, and forms the focus of this volume. The book examines the characteristics of temporary policy measures across a range of rural,

urban and regional contexts, in four continents: Europe, North America, Oceania and Africa. The outcomes and effects of these policies and interventions are analysed, particularly focusing on the tension between short-term interventions and long-term effects.

In the health and community service industries, projects are increasingly used for the development of new services, and to achieve change in existing services, work practices and delivery models. Until now, project workers in these fields have had to rely on books designed for architects, builders and IT administrators. This is the first textbook to take the principles of project management and place them into a context relevant for people working in health and community services. This book provides a critical guide to both the strategic and operational aspects of using projects and making them work. Covering topics such as the lifecycle of a project, planning, execution and evaluation, risk management, change and effective teams, *Project Management for Health and Community Services* uses extensive international case studies and examples from the field. Written by authors with years of practical experience, this is a valuable resource for anyone studying or working on health and community services. *Project Management for Health and Community Services* offers students and professionals practical problem solving strategies and provides a comprehensive guide to managing projects as well as tips on managing a team and the stakeholders.

The business of government is necessarily diverse, changing and of considerable scale. A focus on improving the implementation of government programs and initiatives is important because the community expects the Government to deliver on its policies, as does the Government. The papers included in this collection address numerous aspects of improving implementation. They were initially presented at the Project Management and Organisational Change conference held in Canberra in February 2006, the first annual research conference organised by ANZSOG in conjunction with the Department of the Prime Minister and Cabinet. This collection represents a comprehensive drawing together of experience and insight from both practitioners and academic researchers, with speakers including top public sector executives from the Australian jurisdictions as well as representatives from the United Kingdom, Canada and New Zealand.

across administrative and geographical borders. A collaboration of scholars in the Transnational Initiative on Governance Research and Education (TIGRE Net), *Making Multilevel Public Management Work: Stories of Success and Failure from Europe and North America* brings together two strands of literature—multilevel governance and public management—and draws conclusions on practices of public management in multilevel governance settings. The book focuses on how to make multilevel public management work. Using an inductive logic, the editors study a particular case or a few selected cases, highlight lessons learned and implications, and identify trends and concerns. The book underscores factors essential to making multilevel public management work, namely coordination and collaboration, and new skills and leadership capacities. It discusses the pitfalls of creating networks instead of managing them and the importance of finding the right leadership skills, institutional design, and network management mechanisms to avoid deadlock and manage conflict effectively. Multilevel public management creates multiple opportunities and their accompanying challenges. By bringing together case studies in Europe and North America, this book identifies conditions for success and those under which such governance arrangements fail. Demonstrating the insights gained by the cross-fertilization of ideas, the book has also been strengthened by the participation of researchers from various disciplines, including public management, political science and international relations, economics, as well as administrative law. The interdisciplinary nature of the scholarship provides a complete and compelling portrait of multilevel public management as practiced and studied on two continents. The book opens the debate on what is needed to make it work

Actionable tools, processes and metrics for successfully managing innovation projects
Conventional project management methods are oftentimes insufficient for managing innovation projects. Innovation is lost under the pre-determined scope and forecasted environments of traditional project management. There is tremendous pressure on organizations to innovate, and the project managers responsible for managing these innovation projects do not have the training or tools to do their jobs effectively.

Innovation Project Management provides the tools, insights, and metrics needed to successfully manage innovation projects—helping readers identify problems in their organization, conceive elegant solutions, and, when necessary, promote changes to their organizational culture. There are several kinds of innovation—ranging from incremental changes to existing products to wholly original processes that emerge from market-disrupting new technology—that possess different characteristics and often require different tools. Best-selling author and project management expert Harold Kerzner integrates innovation, project management, and strategic planning to offer students and practicing professionals the essential tools and processes to analyze innovation from all sides. Innovation Project Management deconstructs traditional project management methods and explains why and how innovation projects should be managed differently. This invaluable resource: Provides practical advice and actionable tools for effectively managing innovation projects Offers value-based project

In recent decades, we have witnessed an increasing use of projects and similar temporary modes of organising in the public sector of nations in Europe and around the world. While for some this is a welcome development which unlocks entrepreneurial zeal and renders public services more flexible and accountable, others argue that this seeks to depoliticise policy initiatives, rendering them increasingly technocratic, and that the project organisations formed in this process offer fragmented and unsustainable short-term solutions to long-term problems. This volume sets out to address public sector projectification by drawing together research from a range of academic fields to develop a critical and theoretically-informed understanding of the causes, nature, and consequences of the projectification of the public sector. This book includes 13 chapters and is organised into three parts. The first part centres on the politics of projectification, specifically the role of projects in de-politicisation, often accomplished by rendering the political "technical". The chapters in the second part all relate to the reframing of the relationship between the centre and periphery, or between policy making and implementation, and the role of temporality in reshaping this relation. The third and final part brings a focus upon the tools, techniques, and agents through which public sector projectification is assembled, constructed, and performed.

Celebrated as a beacon of democracy and reconciliation, many people in South Africa continue to live in severe poverty, particularly in the Eastern Cape Province. Backed by the United Nations Development Programme, the Eastern Cape's provincial government consequently launched an historically ambitious programme – the Provincial Growth and Development Plan – aimed at tackling the province's poverty, unemployment and inequality over a ten-year period in a radical policy overhaul. Drawing on the author's first-hand engagement with the planning process, *Development Planning in South Africa* is an empirically rich study that utilises a strategic-relational approach to explore the ways in which this unprecedented challenge was negotiated and eventually undermined by the South African state. The first work of its kind, the book provides an indispensable micro-level study with profound implications for how state power is understood to be organised and expressed in state policy. Relevant beyond South Africa to policy implementation in both developing and developed states globally, the book is essential reading for students and scholars of government studies, political economy, development, policy studies and social movements.
