Cardiovascular/Pulmonary Essentials: Applying the Preferred Physical Therapist Practice Patterns(SM) answers the call to what today's physical therapy students and clinicians are looking for when integrating the Guide to Physical Therapist Practice as it relates to the cardiopulmonary system in clinical care. As a part of Essentials in Physical Therapy led by Series Editor Dr. Marilyn Moffat, Cardiovascular/Pulmonary Essentials: Applying the Preferred Physical Therapist Practice Pattern(SM) is edited by Dr. Donna Frownfelter in a user-friendly format that not only brings together the conceptual frameworks of the Guide language, but also parallels the patterns of the Guide. In each case, where appropriate, a brief review of the pertinent anatomy, physiology, pathology, pharmacology, and imaging is provided. Each pattern then details two to three diversified case studies coinciding with the Guide format. The physical therapist examination, including history, systems review, and specific tests and measures for each case, as well as evaluation, diagnosis, prognosis, plan of care, and evidence-based interventions are also addressed. Sample Cases in Some of the Practice Patterns Include: • Primary Prevention/Risk Reduction for Cardiovascular/Pulmonary Disorders: A junior high student status post hospitalization for pneumonia with personal and familial cardiovascular and pulmonary risk factors; A weekend warrior status post ACL repair with significant cardiovascular and pulmonary risk factors; A medically frail elderly female with CHF in failing health. • Impaired Ventilation Respiration/Gas Exchange, and Aerobic Capacity / Endurance Associated with Airway Clearance Dysfunction: A child with CF exacerbation and failure to thrive; a forty year old patient with CF experiencing a pulmonary exacerbation; A patient with bronchitis and emphysema who has Organic Toxic Dust Syndrome. • Impaired Ventilation and Respiratory/Gas Exchange Associated With Ventilatory Pump Dysfunction/Failure: A child with Duchenne Muscular Dystrophy who has acute shortness of breath with possible aspiration; A patient with Guillain Barre Syndrome, pneumonia and shortness of breath. • Impaired Circulation and Anthropometric Dimensions Associated With Lymphatic System Disorders: A female two years status post lumpectomy and lymph node dissection for breast cancer with secondary lymphedema of her right upper extremity; A male with lower extremity lymphedema following surgery for prostate cancer. At long last, Dr. Marilyn Moffat and Dr. Donna Frownfelter have created a book that will integrate the parameters of the Guide, as it relates to the cardiopulmonary system, into the practice arena, that not only covers the material but also allows for a problem-solving approach to learning for educators and students.

Chronic obstructive pulmonary disease (COPD) is a major cause of morbidity and mortality worldwide and is estimated to become the third most common cause of death over the next decade. The knowledge of COPD pathogenesis and the disease course has greatly improved this progression in understanding and continues to have significant implications in the management of this condition. Novel areas of interest in COPD pathogenesis include further development of animal models, a better understanding of the genetics and epigenetics, the role of the microbiome, and an increasing appreciation of the associated comorbidities. This book intends to provide the reader with a brief overview of these topics and also provide an in-depth review of the current nonpharmacological clinical approaches to managing patients with COPD.

Respiratory diseases affect a large proportion of the population and can cause complications when associated with pregnancy. Pregnancy induces profound anatomical and functional physiological changes in the mother, and subjects the mother to pregnancy-specific respiratory conditions. Reviewing respiratory conditions both specific and non-specific to pregnancy, the book also addresses related issues such as smoking and mechanical ventilation. Basic concepts for the obstetrician are covered, including patient

history, physiology and initial examinations. Topics such as physiological changes during pregnancy and placental gas exchange are discussed for the non-obstetrician. Guidance is practical, covering antenatal and post-partum care, as well as management in the delivery suite. An essential guide to respiratory diseases in pregnancy, this book is indispensable to both obstetricians and non-obstetric physicians managing pregnant patients.

Ultrasound in the Intensive Care Unit explores the current state of evidence supporting use of bedside ultrasound for procedural guidance and for the critical care-focused assessment of a variety of organ systems. This text covers standard practice areas, such as ultrasound guidance for vascular access in the ICU, as well as novel, less well-known applications such as the use of ultrasound for assessment of diaphragm function in patients with respiratory failure. As current ultrasound education is often dependent on widely varying local expertise, this book serves as a standard reference in what is at present a fragmented and challenging field of study for busy clinicians. By providing a comprehensive overview of the current state of critical care ultrasonography, with content contributed by experts in the field, this text will serve as a valuable resource that will allow education in critical care ultrasound to keep pace with the rapid technological growth that has driven this vital area of critical care medicine. Ultrasound in the Intensive Care Unit is essential reading for pulmonologists, practitioners in internal, hospitalist, and critical care medicine; educators and instructors in critical care ultrasound; and medical students, residents, and critical care trainees.
