The term "local content" refers to the value petroleum activities bring to a country beyond the direct revenues from hydrocarbons. Job creation, taxes and fees, and the infusion of talent and education all contribute to local content. With the insight of experts from around the world, this text explores the policies of more than two dozen countries, each with its own approach. It also discusses historical context and how countries could learn from the best and the worst of local content development. Host countries that remain assertive in local content policies also have a better track record in tackling other associated problems. These include economic and social issues as well as also the development of a diverse and well-educated local work force. This text is a valuable resource for legal counsels (in-house and external), governmental authorities, business development managers, economists, NGOs, and academics.

Filling a void in academic and policy-relevant literature on the topic of the green economy in the Arabian Gulf, this edited volume provides a multidisciplinary analysis of the key themes and challenges relating to the green economy in the region, including in the energy and water sectors and the urban environment, as well as with respect to cross-cutting issues, such as labour, intellectual property and South-South cooperation. Over the course of the book, academics and practitioners from various fields demonstrate why transitioning into a 'green economy' – a future economy based on environmental sustainability, social equity and improved well-being – is not an option but a necessity for the Gulf Cooperation Council (GCC) States. Through chapters covering key economic sectors and cross-cutting issues, the book examines the GCC states' quest to align their economies and economic development with the imperatives of environmental sustainability and social welfare, and proposes a way forward, based on lessons learned from experiences in the region and beyond. This volume will be of great relevance to scholars and policy makers with an interest in environmental economics and policy.

2013 saw the transition of power from the former Emir, Sheikh Hamad bin Khalifa Al Thani, to Sheikh Tamim bin Hamad Al Thani, his fourth son and second son with Sheikha Moza bint Nasser, a move unprecedented elsewhere in the Gulf but not unexpected in Qatar. With sustained, long-term economic growth, the highest per capita income in the world, a stable and well-capitalised banking sector, a sovereign wealth fund that is of true global significance and one of the largest reserves of natural gas just offshore, Qatar today has many advantages. It is clear that the country is in a strong position from which to continue its robust economic performance, and the years ahead will see a vast construction drive, in line with the principles of Qatar National Vision 2030 and catalysed by preparations for the 2022 FIFA World Cup. Oil and gas accounted for around 51.5% of Qatar's economic output in 2013, while developing downstream facilities that add value to energy by-products, for example, has helped build a portfolio of petrochemicals, chemicals and fertiliser companies and looks set to see Qatar's economic strength continue. With more than \$222bn of projects in the pipeline, the construction sector's growth has been forecast at 15% for 2014, while spending on infrastructure is set to reach \$150bn in the run-up to the 2022 FIFA World Cup. Against this backdrop, Qatar looks set to continue offering a wide variety of opportunities for foreign investors.

Qatar's road to diversification is paved with ambitious investment programs in a host of sectors, such as agribusiness, IT, and food security. These investment programs and the trends and challenges shaping the Qatari economy are covered in great detail in *The Business Year: Qatar 2020*, our sixth publication dedicated to the country, produced in partnership with the Ministry of Commerce and Industry and the Qatari Businessmen Association. Over the period of our fact-finding, time and time again we were struck by the positive approach of the different stakeholders to tackling the blockade introduced in 2017. Investors looking to understand the major trends and key players in the Qatari economy will find what they need within the pages of this publication. The Business Year's country-specific publications, sometimes featuring over 150 face-to-face interviews, are among the most comprehensive annual economic publications available internationally.

Tall buildings are not the only solution for achieving sustainability through increased density in cities but, given the scale of current population shifts, the vertical city is increasingly being seen as the most viable solution for many urban centers. However, the full implications of concentrating more people on smaller plots of land by building vertically - whether for work, residential or leisure functions - needs to be better researched and understood. It is generally accepted that we need to reduce the energy equation – in both operating and embodied terms – of every component and system in the building as an essential element in making it more sustainable. Mechanical HVAC systems (Heating, Ventilation and Air-Conditioning) in tall office buildings typically account for 30-40 percent of overall building energy consumption. The increased efficiency (or possibly even elimination) of these mechanical systems – through the provision of natural ventilation – could thus be argued to be the most important single step we could make in making tall buildings more sustainable. This guide sets out recommendations for every phase of the planning, construction and operation of natural ventilation systems in these buildings, including local climatic factors that need to be taken into account, how to plan for seasonal variations in weather, and the risks in adopting different implementation strategies. All of the recommendations are based on analysis of the research findings from richly-illustrated international case studies. Tried and tested solutions to real-life problems make this an essential guide for anyone working on the design and operation of tall buildings anywhere in the world. This is the first technical guide from the Council on Tall Buildings and Urban Habitat's Tall Buildings & Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much-reduced environmental impact, while taking the industry closer to an appreciation of what constitutes a sustainable tall building, and what factors affect the sustainability threshold for tall.
