There was something interesting around every corner, be it brumbies and wild donkeys disappearing through the bush, or a little waterhole where the snakes and kangaroos came to drink. Toni's childhood isn't like other kids'. She is only five years old when her mum packs a small suitcase and takes the family over 300 kilometres on a scratchy dirt track to live at Killarney, a remote cattle station in the Northern Territory. Toni grows up among the cattle and horses, with the wild Territory climate and even wilder native animals around her. She has adventures with Old Dora and Daisy, the Aboriginal women who help raise her and her brothers and sisters. They teach her about bush tucker and tell her stories of debil debils. My Outback Childhood is the story of Toni's unconventional upbringing on Killarney - stalking goannas, helping in the cattle yards, riding horses and sleeping under the stars. Young readers will be captivated by this true story of a childhood filled with Outback adventures. Fascinating for city kids and country children alike, this is a unique story that educates as well as entertains.

The riveting and suspenseful account of two young FBI agents in a pursuit of a drug cartel's most fearsome leader, Miguel Treviño Drugs, money, cartels: this is what FBI rookie Scott Lawson expected when he was sent to the border town of Laredo, but instead he's deskbound writing intelligence reports about the drug war. Then, one day,

Lawson is asked to check out an anonymous tip: a horse was sold at an Oklahoma auction house for a record-topping price, and the buyer was Miguel Treviño, one of the leaders of the Zetas, Mexico's most brutal drug cartel. The source suggested that Treviño was laundering money through American quarter horse racing. If this was true, it offered a rookie like Lawson the perfect opportunity to infiltrate the cartel. Lawson teams up with a more experienced agent, Alma Perez, and, taking on impossible odds, sets out to take down one of the world's most fearsome drug lords. In *Bloodlines*, Emmy and National Magazine Award-winning journalist Melissa del Bosque follows Lawson and Perez's harrowing attempt to dismantle a cartel leader's American racing dynasty built on extortion and blood money. With extensive access to investigative evidence and in-depth interviews with key players, del Bosque turns more than three years of research and her decades of reporting on Mexico and the border into a gripping narrative about greed and corruption. *Bloodlines* offers us an unprecedented look at the inner workings of the Zetas and US federal agencies, and opens a new vista onto the changing nature of the drug war and its global expansion.

Antimicrobial resistance (AMR) is a global problem with extremely complex epidemiology involving the direct and indirect transmission of antibiotic resistant pathogens and mobile genetic elements between humans, animals, and the environment. AMR is, therefore, recognized as a 'One Health' issue. Data that describe AMR prevalence and trends are required to enable the judicious and prudent use of antimicrobials in animals, which has implications both from veterinary and animal

welfare aspects as well as from a zoonotic and public health perspective. Horses are a potential reservoir of AMR for humans due to close human–animal contact, as was demonstrated with shared human and horse methicillin-resistant *Staphylococcus aureus* (MRSA) strains causing outbreaks in equine hospitals. Extended-spectrum beta-lactamase-producing Enterobacteriaceae, considered as clinically and economically important to the AMR burden in human and veterinary medicine, has been reported in both community and clinic equine populations. Strains of Enterobacteriaceae pose a major worldwide threat due to the geographical expansion of ESBL-producing clones as well as the horizontal interspecies dissemination of ESBL-encoding plasmids and genes. In human medicine, ESBL-E infection is associated with increased morbidity, mortality, length of hospital stay, delay of targeted appropriate treatment, and higher costs. These issues also need to be addressed in horses. This Special Issue on AMR in horses encompasses several papers that describe the prevalence, risk factors, and molecular data on MDR bacteria in healthy horses in Canada, Japan, Spain, and Israel, in addition to papers that describe the clinical impact of MDR bacteria in diseased horses in Austria, USA, France and Israel.

Learning from Disease in Pets: A ‘One Health’ Model for Discovery is the first encompassing reference guide for veterinarians, researchers and physicians on conducting studies using spontaneous models of disease in animals. The study of naturally occurring disease in (pet) animals can help model our understanding of the

biology, prevention and therapy of human and animal diseases. Studies of pet dogs, for instance, can aid treatment of complex medical problems such as cancer, orthopedic, cardiopulmonary, and neuro-inflammatory diseases, and zoonotic infections. Each chapter within this novel cross-species approach is contributed by a leader, or leaders, in their field of research. Using clinical trials to learn how pets with real diseases respond to therapy can lead to breakthroughs in human medicine, as well as benefiting pets suffering from otherwise debilitating illness. Despite similarities of diseases across species, there are very few spontaneous models of disease used in research compared with models where disease is induced in healthy laboratory animals. Many medical researchers and veterinarians have a multitude of questions regarding how to use naturally occurring diseases in pets for the discovery of treatments and diagnostics: this book will demonstrate how to safely make this happen. This book encourages veterinarians to build on and disseminate existing findings for the wider benefit of pets and humans. Many pets suffering from incurable illnesses may benefit from clinical trials; the book includes a section on the imperative communication styles necessary within the research environment and with clients, a compelling discussion on the ethics of using pets in veterinary clinical research, comprehensive tables of diseases that spontaneously occur in animals and humans, the regulatory requirements necessary to move therapy from benchside research to patient bedside, as well as intricate details on how to design a robust clinical study.

The dramatic true story of two brothers living parallel lives on either side of the U.S.-Mexico border—and how their lives converged in a major criminal conspiracy José and Miguel Treviño were bonded by blood and a shared vision of a better life. But they chose different paths that would end at the same violent crossroads—with considerable help from the FBI and an enigmatic, all-American snitch. José was a devoted family man who cut no corners in his pursuit of the American dream. Born in Nuevo Laredo, a Mexican border town on a crucial smuggling route, José was one of thirteen children

raised by a hardworking ranch hand. He grew up loving the sprawling countryside and its tough, fast quarter horses, but in search of opportunity he crossed the border into Texas to look for work as a bricklayer. He kept his nose clean. He stayed out of trouble. Back in Mexico, José's younger brother Miguel was leading a different life. While José struggled to make ends meet, Miguel ascended to the top ranks of Los Zetas, a notoriously bloody drug cartel—his crimes had become the stuff of legend and myth on both sides of the border. He was said to have burned rivals alive, murdered Mexican and American law enforcement officers, and launched grenades at a U.S. consulate. José, married with kids and now a U.S. citizen, gave every indication of rejecting his brother's criminal lifestyle. Then one day he showed up at a quarter-horse auction and bid close to a million dollars for a horse—the largest amount ever paid for a quarter horse at an auction. The humble bricklayer quickly became a major player in the quarter-horse racing scene that thrived in the American Southwest and Mexico. That caught the attention of an eager young FBI agent named Scott Lawson. He enlisted Tyler Graham, an American rancher who would eventually breed José's champion horse—nicknamed Bones—to help the FBI infiltrate what was revealing itself to be a major money-laundering operation, with the ultimate goal of capturing the infamous Miguel Treviño. Joe Tone's riveting, exquisitely layered crime narrative, set against the high-stakes world of horse racing, is an intimate story about family, loyalty, and the tragic costs of a failed drug war. Compelling and complex, Bones sheds light on the

perilous lives of American ranchers, the morally dubious machinery of drug and border enforcement, and the way greed and fear mingle with race, class, and violence along America's vast Southwestern border.
