This book presents up-to-date recommendations for the prevention, diagnosis, and management of complications in endodontic surgical procedures, based on the best available scientific evidence. Common risks such as wound healing impairment, infection and bleeding are discussed and specific complications related to endodontic surgery, such as maxillary sinus involvement and damage to adjacent neurovascular structures, are reviewed. For each step of endodontic surgical procedures, surgical goals and possible outcomes are reviewed. Preoperative, intraoperative and postoperative risk factors for complications are identified and treatment options presented. Helpful decision-making algorithms, tables and flow charts complement the reader-friendly text.

Textbook of Prosthodontics encompasses all the different subspecialties of prosthodontics like Complete Dentures (CD), Removable Partial Dentures (RPD), Fixed Partial Dentures (FPD), Oral Implantology (OI) and Maxillofacial Prosthetics (MFP) with an aim to demystify

This book presents a multidisciplinary evidence-based approach to the management of teeth with lesions of endodontic-periodontal origin. The book opens by addressing the etiology and classification of endodontic-periodontal lesions, and demonstrates its relevance to the daily practice. Specific endodontic, prosthetic, and periodontal considerations that should be incorporated into clinical decision making and treatment planning are then discussed in detail. Subsequent chapters describe modern clinical procedures in periodontal regenerative treatment, describe vertical root fractures as an endodontic-periodontal lesion, examine treatment alternatives following the extraction of teeth with endodontic-periodontal lesions, and discuss possible biological complications in implant supported oral rehabilitation. Finally, a summary chapter considers the integration of clinical factors and patient values into clinical decision making. The text is accompanied by many figures presenting informative clinical examples. The authors are internationally

This book provides clinicians with state of the art information on the use of zygomatic implants to restore function and improve quality of life.

International experts come together to showcase important innovations and advances in techniques that will assist in the optimization of outcomes.

Readers will find information on indications, biomechanics, the role of imaging, digital treatment planning, and all aspects of implant placement.

Individual chapters are devoted to different procedures, including the extramaxillary surgical technique, extended sinus lift with retained bone window, the anatomy-guided approach, the quad zygoma technique, and static and dynamic guided surgery. The use of zygomatic implants specifically in oncology patients is also given detailed consideration. Today, the zygomatic approach offers many advantages for patients with severe maxillary resorption, in whom grafting was in the past unavoidable. In providing an up-to-date global perspective on the zygoma concept, this book will be

Year: 2019. The world is falling apart. The temperamental President of the United States of America, facing a tough re-election and playing to populist voter sentiment, has imposed trade sanctions on a belligerent China. Meanwhile, Chinese citizens, reeling from a disastrous economic meltdown, have taken to the streets in revolt. Staring at the bleak prospect of being ousted from power after 60 years of iron rule in the wake of threats both external and internal, the leaders of the Communist Party in China initiate military action, drawing its rival superpowers Japan and the United States into a conflict that portends an all-out nuclear war. As nations across the globe switch to emergency mode, Japanese intelligence reveals that China's aggression could have been fuelled by a singular circumstance: the development of a vaccine based on ancient tribal knowledge that could tilt military balance in its favour. But what is this secret weapon China possesses and how can it be stopped? The fate of the world now rests on the success of a quest undertaken by an eclectic team – a Japanese policewoman, an Indian ethnologist and a young Indian mountain guide, assisted in part by a devious Russian geologist – to unravel the only clue they have at hand, buried in a fable from a time long past, when the magic of the shamans guided the rulers of Tibet. Will they succeed? Or will the Chinese foil their attempts and trigger the ultimate, apocalyptic war?
