AUSTRALIAN PROPERTY INVESTMENT AND FINANCING is a unique and timely book providing thorough analysis of income-producing properties in Australia. It is an essential guide to the selection and pricing of properties and property securities, as well as describing how they are financed. Real property in the form of investment, ownership and use pervades almost every aspect of daily lives and represents over 40% of Australia's wealth. Such assets do not exist in isolation – they are dynamic and forever evolving, impacted by a range of physical, economic, demographic, legal and other forces. Consequently, a true appreciation of individual assets and of the property sector as a whole demands an understanding of both the assets themselves and the context and markets in which they exist. The sector is complex and, on the face of it, confusing. It is however, not without logic and underlying themes and principles. This book provides a wider understanding of how the real property sector works. It covers topics such as the nature of real property and its functions, economic drivers, valuation principles, legal and tenure parameters, property taxation, land development and subdivision, asset and property

management and sustainability – all critical components in this complex and critically important sector. It provides a wide and balanced perspective for experienced practitioners, investors, students and anyone involved in property decision-making or wishing to secure a deeper understanding of these areas. The book integrates research-based theory with practical application and first-hand insights into a sector that underpins the Australian economy, its communities and its sustainability.

An introductory, first year text on property valuation with a clear, well-defined structure based around the five valuation methods.

America's landscape is undergoing a profound transformation as demand grows for a different kind of American Dream--smaller homes on smaller lots, multifamily options, and walkable neighborhoods. This trend presents a tremendous opportunity to reinvent our urban and suburban areas. But in a time of fiscal austerity, how do we finance redevelopment needs? In *Foundations of Real Estate Development Finance: A Guide for Public-Private Partnerships*, urban scholar Arthur C. Nelson argues that efficient redevelopment depends on the ability to leverage resources through partnerships. Public-private partnerships are increasingly important in reducing the complexity and lowering the risk of redevelopment projects. Although planners are an integral part of creating these partnerships, their training does generally not include real-estate financing, which presents challenges and imbalances in public-private partnership. This is the first primer on financing urban redevelopment written for practicing planners and

public administrators. In easy-to-understand language, it will inform readers of the natural cycle of urban development, explain how to overcome barriers to efficient redevelopment, what it takes for the private sector to justify its redevelopment investments, and the role of public and nonprofit sectors to leverage private sector redevelopment where the market does not generate sufficient rates of return. This is a must read for practicing planners and planning students, economic development officials, public administrators, and others who need to understand how to leverage public and non-profit resources to leverage private funds for redevelopment.
