A riveting narrative of the adoption of the Fourteenth Amendment, an act which revolutionized the U.S. constitution and shaped the nation's destiny in the wake of the Civil War. Though the end of the Civil War and Lincoln's Emancipation Proclamation inspired optimism for a new, happier reality for blacks, in truth the battle for equal rights was just beginning. Andrew Johnson, Lincoln's successor, argued that the federal government could not abolish slavery. In Johnson's America, there would be no black voting, no civil rights for blacks. When a handful of men and women rose to challenge Johnson, the stage was set for a bruising constitutional battle. Garrett Epps, a novelist and constitutional scholar, takes the reader inside the halls of the Thirty-ninth Congress to witness the dramatic story of the Fourteenth Amendment's creation. At the book's center are a cast of characters every bit as fascinating as the Founding Fathers. Thaddeus Stevens, Charles Sumner, Frederick Douglass, Susan B. Anthony, among others, understood that only with the votes of freed blacks could the American Republic be saved. *Democracy Reborn* offers an engrossing account of a definitive turning point in our nation's history and the significant legislation that reclaimed the democratic ideal of equal rights for all U.S. citizens.

"This is a story you'll love and never forget."—Christopher McDougall, author, *Born to Run* and *Natural Born Heroes* Aside from her rock star looks, Catra Corbett is a standout in the running world on her accomplishments alone. Catra is the first American woman to run over one hundred miles or more on more than one hundred occasions and the first to run one

hundred and two hundred miles in the Ohlone Wilderness, and she holds the fastest known double time for the 425-miles long John Muir Trail, completing it in twelve days, four hours, and fifty-seven minutes. And, unbelievably, she's also a former meth addict. After two years of addiction, Catra is busted while selling, and a night in jail is enough to set her straight. She gives up drugs and moves back home with her mother, abandoning her friends, her boyfriend, and the lifestyle that she came to depend on. Her only clean friend pushes her to train for a 10K with him, and surprisingly, she likes it—and decides to run her first marathon after that. In *Reborn on the Run*, the reader keeps pace with Catra as she runs through difficult terrain and extreme weather, is stalked by animals in the wilderness, and nearly dies on a training run but continues on, smashing running records and becoming one of the world's best ultrarunners. Along the way she attempts suicide, loses loved ones, falls in love, has her heartbroken, meets lifelong friends including her running partner and dachshund TruMan, and finally faces the past that led to her addiction.

Airpower Reborn offers a conceptual approach to warfare that emphasizes airpower's unique capability to achieve strategic effects. Six world-leading theorists argue that a viable strategy must transcend the purely military sphere, view the adversary as a multi-dimensional system, and pursue systemic paralysis and strategic effects rather than military destruction or attrition. The book is divided into three parts. The first section presents a historical perspective on airpower theory and airpower strategy, tracing their evolution from the 1920s to the 1980s. The second section contains in-depth examinations of the strategic concepts that John R. Boyd and John A. Warden developed in the 1980s and 1990s, with an emphasis on their contemporary relevance. The final section provides further context on modern airpower theory and strategy. Theory, in this setting, serves as the basic paradigm, strategy represents its generic, mechanisms-centered application, and plans of campaign constitute the specific steps for any given situation. In short, the authors look beyond the land-centric, battlefield-oriented paradigm that has continued to dominate military theories and strategies long after airpower offered new options. The book acknowledges the essential role of advanced technology in improving airpower capabilities, but emphasizes that air services must cultivate and harness the intellectual acumen of airmen and encourage officers and men to think conceptually and strategically about the application of aerospace power. Modern airpower can offer political decision-makers more and better options--provided the underlying strategy coherently links the application of

airpower directly to the end-state objectives rather than limiting it to "the battle." The book recommends that all countries should consider establishing a dynamic and vibrant environment for mastering aerospace history, theory, strategy, and doctrine; a milieu for cultivating broader knowledge of and insight into airpower; and a setting in which airpower experts have the opportunity to communicate their narrative to politicians, the media, and fellow officers, and to interact to mutual benefit with experts from all sectors of governance. This effort should emphasize the potentially unique contribution of airpower to political objectives and joint operations, and in turn connect to operational headquarters that do operational planning. Mastering such strategic thought lies at the heart of the military profession, but it requires in-depth knowledge and understanding of theory, strategy, and airpower, and transcends traditional metrics.

"Beyond the battles themselves, Glantz also presents an in-depth portrait of the Red Army as an evolving military institution. Assessing more clearly than ever before the army's size, strength, and force structure, he provides keen insights into its doctrine, strategy, tactics, weaponry, training, officer corps, and political leadership. In the process, he puts a human face on the Red Army's commanders and soldiers, including women and those who served in units - security (NKVD), engineer, railroad, auto-transport, construction, and penal forces - that have till now remained poorly understood."--BOOK JACKET. compelling exploration of one of the largest dam removal projects in the world—and the efforts to save a stunning Northwest ecosystem * Co-published with The Seattle Times * 125 color photographs, including rare historic images * Dam removal started in September 2011 while restoration work continues today In the fall of 2011, the Times was on hand when a Montana contractor removed the first pieces from two concrete dams on the Elwha River which cuts through the Olympic range. It was the beginning of the largest dam removal project ever undertaken in North America—one dam was 200 feet tall—and the start of an unprecedented attempt to restore an entire ecosystem. More than 70 miles of the Elwha and its tributaries course from the mountain headwaters to clamming beaches on the Strait of Juan de Fuca. Through interviews, field work, archival and historical research, and photojournalism, The Seattle Times has explored and reported on the dam removal, the Elwha ecosystem, its industrialization, and now its renewal. Elwha: A River Reborn is based on these feature articles. Richly illustrated with stunning photographs, as well as historic images, graphics, and a map, Elwha tells the interwoven stories of this region. Meet the Lower Elwha Klallam tribe, who anxiously await the return of renowned salmon runs savored over the generations in the stories of their elders. Discover the biologists and engineers who are bringing the dams down and laying the plan for renewal, including an unprecedented revegetation effort that will eventually cover more than 700 acres of mudflats. When the dam started to come down in Fall 2011—anticipated for more than 20 years

since Congress passed the Elwha Restoration Act—it was the beginning of a \$350 million project observed around the world. *Elwha: A River Reborn* is inspiring and instructive, a triumphant story of place, people, and environment striving to come together. What am I here for? How should I behave? Most Christians, faced with those questions, think in terms either of 'rules' or of 'living authentically'. Both lead to problems. In this book, full of fresh biblical exploration, Bishop Tom Wright proposes instead that we inhabit the ancient tradition of virtue once again -- but from a thoroughly Christian, not just a philosophical, perspective. The virtues are the strengths we need to get to our goal. Following on from his popular best-selling books *Simply Christian* and *Surprised by Hope*, he sees the goal in terms of the whole new creation, with humans renewed to look after it.

This book is an original interpretation of the professions and the role of the professional in Western industrial societies today.

The epic conclusion to the *Shadow Beast Shifters*. I finally have the life I always dreamed of. So why does it

taste like ash on my tongue? Growing up in Torma, the strongest of the shifter packs, I wanted nothing more than to find my true mate and live my best life. Of course, that dream existed before my father betrayed the pack and turned me into their punching bag. I'd all but given up, until a quirk of true mate genetics gifted me a true mate like no other. My childhood dreams were finally a reality. Funny how quickly dreams turn into nightmares. I'm being lied to, missing weeks and months of time. Someone messed with me and no matter how often I'm told to forget it and move on as Torin's mate, there's no way I can. Whoever did this to me should have known I'd pick at it until it bled. It's my nature after all. As I search out random growls, flutters in my chest, and a suspicion that there's so much more going on than I could even imagine, I sense that I'm racing against an unknown clock. I need to get to the bottom of this mystery. And when I figure out who stole my memories, they're going to wish they never messed with Mera Callahan. Game on. -If you like sexy, dark paranormal romances, with humor, steam, action, a tough heroine and an antihero, this is for you.

A radical new view of the nature of time and the cosmos—"at once entertaining, thought-provoking, fabulously ambitious and fabulously speculative" (The New York Times Book Review). What is time? This deceptively simple question is the single most important problem facing science as we probe deeper into the fundamentals of the universe. All of the mysteries physicists and cosmologists face—from the Big Bang to the future of the universe, from the puzzles of quantum physics to the unification of forces and particles—come down to the nature of time. The fact that time

is real may seem obvious. You experience it passing every day when you watch clocks tick, bread toast, and children grow. But most physicists, from Newton to Einstein to today's quantum theorists, have seen things differently. The scientific case for time being an illusion is formidable. That is why the consequences of adopting the view that time is real are revolutionary. Here, the author of *The Trouble with Physics* argues that a limited notion of time is holding physics back—and what we need now is a major shift in scientific thought. The true reality of this manmade construct could be the key to the next big breakthrough in theoretical physics—and could hold implications relevant to issues from climate change to the economy. What if the laws of physics themselves were not ageless? What if they could evolve? *Time Reborn* offers a radical approach to cosmology that embraces the concept of time and opens up a whole new universe of possibilities. “With rare conceptual daring, Smolin beckons toward a new perspective for doing cosmological theory . . . A thrilling intellectual ride.” —Booklist, starred review

Asia Reborn unveils the story of Asia's resurgence over the past century. In the first single chronicle of the modern economic and political history of the whole continent, Prasenjit K. Basu weaves together a compelling account of how Asia's nations overcame European domination in the twentieth century-and its legacies of war and famine-to begin the long climb to economic dynamism. Asia Reborn shows British, Dutch and French colonies to have had scant infrastructure or modern industry and to have consequently been far behind Taiwan, Manchuria and Korea in social indicators such as literacy and life expectancy by mid-century. In West Asia and Burma, the brief European imprint created the ethnic conflicts that still plague these regions. The British Indian Army held the edifice of empire together. Ultimately, it was the undermining of its legitimacy by the armies of Subhas Bose, Sukarno, Ho Chi Minh and Aung San that helped end the ravaging of Asia during the first half of the twentieth century. By the end of the century, the eastern part of the liberated continent, had emulated Japan and Singapore in transforming itself into an industrious, dynamic and increasingly creative force finally capable of taking its people to new heights in an Asian twenty-first century. A theoretical physicist and author of the controversial best-seller *The Trouble with Physics* describes his new approach for thinking about the reality of time and explains his theory about the laws of physics not being

timeless but rather capable of evolving.

In the year 2025, life is decadent, and the major recreational drug is an aphrodisiac patch. When applied on a woman, it instantly brings her hormonal levels to the plateau phase, just prior to orgasm. Initially designed to assist women in the menopausal phase of life, it became legalized as an over-the-counter drug that is now sold in dispensing machines. Anyone eighteen years or older can buy the patch for ten dollars, making it widely distributed throughout the United States. A drug lord from Columbia wants to sell the drug in China, where he anticipates making billions of dollars in profits. But the ruling council there denies his request. To force a positive response and cooperation with his distribution plans, the drug lord abducts Wang, the son of the premier of China. China has three days to acquiesce to his demands, or Wang will be killed. The premier calls on the president of the United States for assistance. The

president sends two enlightened people with special powers, Admiral Aaron Mullins, also known as the Pendragon, and Connie Chunxia, a special liaison on International Affairs, to rescue Wang. But he has been hidden in a Malayan jungle where dangers lurk everywhere. Just when Connie and the Pendragon think they have succeeded, the drug lord surfaces with an entirely new identity and is bent on sadistic revenge. Mihai Spariosu here explores the significance of the closely linked concepts of play and aestheticism in philosophical and scientific discourse since the end of the eighteenth century. Spariosu points out that since its birth in archaic and classical Hellenic thought the concept of play has always been subject to the influences of various rational and prerational sets of values. Spariosu maintains that there have been not one but two major modern concepts of aestheticism: artistic aestheticism, related to a prerational mentality and introduced in modern thought by Schopenhauer and Nietzsche; and philosophical/scientific aestheticism, initiated by Kant and Schiller and shaped by rationalism. According to Spariosu, the first has often arisen in response to the attempts of philosophy and science to impose their standards on art, and the second has often been called on to deal with the epistemological crises that periodically shake these disciplines. Spariosu also looks closely at some of the play concepts that surface in modern science in connection with the Darwinian theory of evolution and the play of scientific discourse itself, as exemplified by the new physics and the contemporary philosophy of science. A penetrating and cogently

argued book, Dionysus Reborn will be welcomed by readers interested in Continental philosophy, scientific discourse, and the aesthetics of play, including literary theorists, comparatists, philosophers, intellectual historians, and social scientists.

A study of one of the fundamental concept of quantum physics examines the strange correlation between two separated particles, entitled "entanglement" by physicist John Bell, drawing on the work of leading physicists to explain the phenomenon.
