After all you don't plan to use this car anymore to get as fast as possible from A to B. Today you use it more like you

enjoy a well aged wine, where you savour every sip. With the R129 you cherish every ride. A special case is the V12. To buy one that is less than perfect is a guarantee to ruin you. You have read this far, then this new book, which was already published as e-book, will interest you. It comes with a comprehensive buyer's guide and explains the VIN and data card in great detail, so that one has a better understanding, how these cars were originally equipped and to which market they have been shipped first. Naturally it covers the development and history of the R129, but it also reveals the engines' strong and weak points and has a look at the cars' recent price development. The book ends with a detailed list of the cars' technical specifications and the annual production history of each model.

The Airbus A380 is the world's most recognised and most talked about airliner since the Boeing 747 and Concorde appeared in the skies in the late 1960s. Designed to challenge Boeing's monopoly in the large-aircraft market, it made its first flight in April 2005, entering commercial service two years later with Singapore Airlines. This jet has become so popular that every four minutes--24 hours a day, seven days a week--an A380 is taking off or landing somewhere in the world. There is no other development in recent aviation history to rival this remarkable aircraft.
