"The authors carefully considered how to thoughtfully and meaningfully integrate data analytics into the financial accounting course, and are pleased to provide the following data analytics resources. Data Analytics and Decision-Making The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--

The gap between demand for consumer goods and their efficient supply is greater now than at any other time, and is widening as consumers' wants become less predictable, and suppliers struggle to meet them. Quick Response (QR) is both a management paradigm and a methodology that allows supply systems to react quickly to changes while improving their performance. QR aims to help organize a business in the face of problems associated with the vast array of goods and services now to be found in consumer markets. It is particularly relevant to the Fast Moving Consumer Goods (FMCG) and Fashion industries. QR works by compressing the time between product or service design concept and appearance on the retail shelf. It then takes advantage of such recent technologies as Point of Sale (PoS) tracking and Electronic Data Interchange (EDI) to constantly up-date estimates of true consumer demand, and then places intelligent re-orders for goods with flexible manufacturers and their suppliers. One of the features of this book is the demonstration that the range of industries able to benefit from the application of QR methodologies is extremely wide. However, this apparent universality comes with a strong 'health warning'. By placing QR in a broad framework of management thinking, the book allows comparison with other paradigms and their off-shoots - partnerships and alliances, measurement and benchmarking, Information Systems Technology strategies, Total Quality Management, and change management. Belief systems such as World Class Manufacturing, Lean Production, Agile Manufacturing, Virtual Organization, Time-Based Competition, Supply Chain Management (SCM) and chaos theory, are also reviewed and contrasted. The book then quantifies the performance benefits that accrue from the application of QR using examples from the US and European industries as well as computer simulation. Lessons are also drawn from a wide variety of SMEs (Small and Medium sized Enterprises) who are using QR as a strategic tool, as well as those who have not yet adopted it. For the latter, there are recommendations for implementing QR. The future management and research directions required for full exploitation of QR are also explored in a separate section. The most important aspect of this book is that it concentrates on the practical, hands-on management of a supply pipeline as opposed to the generalized theories of Supply Chain Management.

"Introduction to Financial Statements Knowing the numbers is sometimes even a matter of corporate survival. Consider the story of Columbia Sportswear Company, headquartered in Portland, Oregon. Gert Boyle's family fled Nazi Germany when she was 13 years old and then purchased a small hat company in Oregon, Columbia Hat Company. In 1971, Gert's husband, who was then running the company, died suddenly. Gert took over the small, struggling company with help from her son Tim, who was then a senior at the University of Oregon. Somehow, they kept the company afloat. Today, Columbia has more than 4,000 employees and annual sales in excess of \$1 billion. Its brands include Columbia, Mountain Hardwear, Sorel, and Montrail. Employers such as Columbia Sportswear generally assume that managers in all areas of the company are "financially literate." To help prepare you for that, in this text you will learn how to read and prepare financial statements, and how to use key tools to evaluate financial results using basic data analytics."--
