

Revue Technique Auto Fiat Punto

Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

The Romance languages offer a particularly fertile ground for the exploration of the relationship between language and society in different social contexts and communities. Focusing on a wide range of Romance languages – from national languages to minoritised varieties – this volume explores questions concerning linguistic diversity and multilingualism, language contact, medium and genre, variation and change. It will interest researchers and policy-makers alike.

In *A View from Abroad* Nicolás Bas recreates, using a bibliographical approach, the manner in which Spain was regarded in Europe in the Eighteenth century, by consulting booksellers' catalogues, private book collections and key auctions in Paris and London.

Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different data). After more than thirty years of development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

The present studies on Brazilian modern art seek to specify some of the dominant contradictions of capitalism's combined but uneven development as these appear from the global 'periphery'.

Second edition of Gloria Anzaldua's major work, with a new critical introduction by Chicano Studies scholar and new reflections by Anzaldua.

A volume devoted to Giugiaro and Italdesign could hardly not be included in the Masterpieces of style series. Giugiaro is one of the most prestigious names in the history of automotive design, synonymous with iconic cars such as the Alfa Romeo Giulia Sprint GT and Alfetta, the Volkswagen Golf, the Audi 80, the Fiat Panda, Uno and Punto, the Lancia Delta, Thema and Prisma and the Maserati Bora, Ghibli and Merak, to mention but a few of the most successful designs to carry the Giugiaro name.

Born in 1938 at Garessio in the province of Turin, Giugiaro honed his professional skills at Bertone and then at Ghia before setting up on his own when founding Giugiaro Italdesign in 1968. Today the firm is as active as ever and has been responsible for concept cars such as the Caimano, the Iguana and the Canguro, all based on Alfa Romeo mechanicals, and the Asso di Picche and the Quadri on respectively Audi and BMW chassis. This monograph covers this long technical and stylistic history, drawing on a clear, comprehensive text and hundreds of photographs, many of which previously unpublished. The series, includes books on Zagato (2017) Touring (2017), Pininfarina (2018) and, to be published soon, Bertone, Vignale and Ghia.

In *Decoding the Stars*, Ileana Chinnici offers an account of the life of the Jesuit scientist Angelo Secchi (1818-1878) and his important contributions to the development of many sciences, paying special attention to his studies in early astrophysics.

Economic activity is more globally integrated than ever before, but so is the scope of corporate misconduct. As more and more people across the world are affected by such malfeasance, the differences in legal redress have become increasingly visible. This transparency has resulted in a growing convergence towards an American model of robust private enforcement of the law, including the class-action lawsuit. This handbook brings together scholars from nearly two dozen countries to describe and assess the class-action procedure (or its equivalent) in their respective countries and, where possible, to offer empirical data on these systems. At the same time, the work presents a variety of multidisciplinary perspectives on class actions, from economics to philosophy, making this handbook an essential resource to academics, lawyers, and policymakers alike.

Latin American states took dramatic steps toward greater inclusion during the late twentieth and early twenty-first Centuries. Bringing together an accomplished group of scholars, this volume examines this shift by introducing three dimensions of inclusion: official recognition of historically excluded groups, access to policymaking, and resource redistribution. Tracing the movement along these dimensions since the 1990s, the editors argue that the endurance of democratic politics, combined with longstanding social inequalities, create the impetus for inclusionary reforms. Diverse chapters explore how factors such as the role of partisanship and electoral clientelism, constitutional design, state capacity, social protest, populism, commodity rents, international diffusion, and historical legacies encouraged or inhibited inclusionary reform during the late 1990s and early 2000s. Featuring original empirical evidence and a strong theoretical framework, the book considers cross-national variation, delves into the surprising paradoxes of inclusion, and identifies the obstacles hindering further fundamental change.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

Includes section "Comptes rendus bibliographiques".

First published in 1996, this volume has been substantially updated to reflect new research in the conservation of stone monuments, sculpture, and archaeological sites.

This book is open access under a CC BY 4.0 license "Francesca Billiani and Laura Pennacchietti draw brilliantly and with precision the evolution of the new architecture and of the national novel (with insights on translations of international novels), whose profiles had been shaped from different angles, especially in the 1930s. These two fields, apparently so distant one from the other, had never been analysed in parallel. This book does this and uncovers several points of contact between the two, spanning propaganda and theoretical turning points." —Chiara Costa and Cornelia Mattiacci, Fondazione Prada, Italy "This book shows convincingly how the arte di Stato during Fascism was created with the morality of a new novel as well as architecture. It is surprising to read how one of the representatives of State art, Giuseppe Bottai, is also one of the finest critics of realist novels and rationalist architecture. More than parallel endeavours, the system of the arts during the Fascist regime should be viewed as a series of intersections of cultural, political and aesthetic discourses." —Monica Jansen, Utrecht University, The Netherlands Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy (1922-1943). By looking at two profoundly diverse aesthetic phenomena within the context of the creation of a Fascist State art, Billiani and Pennacchietti argue that an effort of construction, or reconstruction, was the main driving force behind both projects: the advocated "revolution" of the novel form (realism) and that of architecture (rationalism). The book is divided into seven chapters, which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel and on architecture, as well as their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and buildings, which have in practice realized some of the key principles articulated in the theoretical disputes. Francesca Billiani is Senior Lecturer in Italian Studies and Director of the Centre for Interdisciplinary Research in the Arts and Languages at the University of Manchester, UK. Laura Pennacchietti is Research Associate in Italian Studies at the University of Manchester, UK.
