Data compiled by the Center for Disease Control and Prevention indicates an alarming and continuing increase in the prevalence of autism. Despite intensive research during the last few decades, autism remains a behavioral defined syndrome wherein diagnostic criteria lack in construct validity. And, contrary to other conditions like diabetes and hypertension, there are no biomarkers for autism. However, new imaging methods are changing the way we think about autism, bringing us closer to a falsifiable definition for the condition, identifying affected individuals earlier in life, and recognizing different subtypes of autism. The imaging modalities discussed in this book emphasize the power of new technology to uncover important clues about the condition with the hope of developing effective interventions. *Imaging the Brain in Autism* was created to examine autism from a unique perspective that would emphasize results from different imaging technologies. These techniques show brain abnormalities in a significant percentage of patients, abnormalities that translate into aberrant functioning and significant clinical symptomatology. It is our hope that this newfound understanding will make the field work collaborative and provide a path that minimizes technical impediments.

In 1799 four missionaries - two English and two Dutch - arrived at the Cape, having been sent out by the London missionary society. This is their story. Although mission work by the Moravians had begun some time before, this meant the commencement of large-scale mission work in South Africa, and initiated what might be called the 'golden age' of missionary activity in South Africa. The Early Mission, 1799-1819 consists of 17 essays, some of them in Afrikaans, in which the noted writer and historian Karel Schoeman describes the life and work of a number of missionaries, mission assistants and artisans, 'native agents', catechists and lay helpers, including three women, who were involved in the establishment of the mission during the pioneer period. His subjects are mainly Dutch and indigenous mission workers in the service of the LMS and their work among the slave population of the Cape Colony and the inhabitants of the Orange River area beyond the northern frontier of the Colony.

With a New Foreword In So Damn Much Money, veteran Washington Post editor and correspondent Robert Kaiser gives a detailed account of how the boom in political lobbying since the 1970s has shaped American politics by empowering special interests, undermining effective legislation, and discouraging the country's best citizens from serving in office. Kaiser traces this dramatic change in our political system through the colorful story of Gerald S. J. Cassidy, one of Washington's most successful lobbyists. Superbly told, it's an illuminating dissection of a political system badly in need of reform.

"You can be lonely anywhere, but there is a particular flavor to the loneliness that comes from living in a city, surrounded by thousands of strangers. The Lonely City is a roving cultural history of urban loneliness, centered on the ultimate city: Manhattan, that teeming island of gneiss, concrete, and glass. What does it mean to be lonely? How do we live, if we're not intimately involved with another human being? How do we connect with other people, particularly if our sexuality or physical body is considered deviant or damaged? Does technology draw us

closer together or trap us behind screens? Olivia Laing explores these questions by travelling deep into the work and lives of some of the century's most original artists, among them Andy Warhol, David Wojnarowicz, Edward Hopper, Henry Darger and Klaus Nomi. Part memoir, part biography, part dazzling work of cultural criticism, *The Lonely City* is not just a map, but a celebration of the state of loneliness. It's a voyage out to a strange and sometimes lovely island, adrift from the larger continent of human experience, but visited by many - millions, say - of souls"--

The availability of fibre from private land in Alberta has been largely ignored because of a surplus from public land. However, much of this surplus has been allocated in recent years, so that fibre from private land is quickly becoming a potentially important wood supply for primary forest products firms in Alberta. This study obtained information from 38 land owners in west-central Alberta through a personal interview survey conducted in May 1989. Respondents were asked questions on the physical characteristics of their land, production costs from harvesting, questions related to their socio-economic conditions, and uses of their forest lands. The study also used a model to evaluate the relative importance of a number of variables for their effect on a landowner's decision to supply fibre now and in the future. A discussion of market structures for private fibre is presented, with the presence of transactions costs to both landowners and firms in procuring private fibre analyzed in light of the modelling results.
