

Rf Machine Learning Systems Rfmls Darpa

There is a wealth of literature and books available to engineers starting to understand what machine learning is and how it can be used in their everyday work. This presents the problem of where the engineer should start. The answer is often "for a general, but slightly outdated introduction, read this book; for a detailed survey of methods based on probabilistic models, check this reference; to learn about statistical learning, this text is useful" and so on. This monograph provides the starting point to the literature that every engineer new to machine learning needs. It offers a basic and compact reference that describes key ideas and principles in simple terms and within a unified treatment, encompassing recent developments and pointers to the literature for further study. A Brief Introduction to Machine Learning for Engineers is the entry point to machine learning for students, practitioners, and researchers with an engineering background in probability and linear algebra. This proceedings constitutes the refereed proceedings of the 15th EAI International Conference on Communications and Networking, ChinaCom 2020, held in November 2020 in Shanghai, China. Due to COVID-19 pandemic the conference was held virtually. The 54 papers presented were carefully selected from 143 submissions. The papers are organized in topical sections on Transmission Optimization in Edge Computing; Performance and Scheduling Optimization in Edge Computing; Mobile Edge Network System; Communication Routing and Control; Transmission and Load Balancing; Edge Computing and Distributed Machine Learning; Deep Learning. This symposium explores emerging trends and novel ideas

Acces PDF Rf Machine Learning Systems Rfmls Darpa

and concepts covering a broad range of topics in the area of VLSI from VLSI circuits, systems and design methods, to system level design issues, to bringing VLSI design to new areas and technologies such as nano and molecular devices, security, artificial intelligence, and Internet of Things, etc Future design methodologies and new EDA tools are also a key topic at the Symposium This Symposium also features a theme of Smart and Secure Circuits and Systems Over three decades the Symposium has been a unique forum promoting multidisciplinary research and new visionary approaches in the area of VLSI, bringing together leading scientists and researchers from academia and industry

First published in 1997, this volume emerged in response to the need for material on the research, development, use and application of mass appraisal techniques for ad valorem property tax systems. The primary paradigms discussed include regression, base home technique, adaptive estimation procedure and artificial neural networks. Intending to address a wide range of property types, the authors explored residential, condominiums, retail, office and industrial property as well as agricultural and forestry land. The Department of Defense has been successfully exploiting rapidly developing advances in information technology for military gain. On tomorrow's multidimensional battlefield - or "battlespace" - the increased density, acuity, and connectivity of sensors and many other information devices may allow U. S. Armed Forces to see almost everything worth seeing in real or near-real time. Such enhanced vision of the battlespace is no doubt a significant military advantage, but a question remains: How to we achieve dominant battlefield knowledge, namely the ability to understand what we see and act on it decisively? The papers collected here address the most critical aspects of that problem - to wit: If the United States develops the means to acquire dominant battlespace

Acces PDF Rf Machine Learning Systems Rfmls Darpa

knowledge (DBK), how might that affect the way it goes to war, the circumstances under which force can and will be used, the purposes for its employment, and the resulting alterations of the global geomilitary environment? Of particular interest is how the authors view the influence of DBK in light of the shift from global and regional stability issues that marks the post-Cold War world. While no definitive answer has yet emerged, it is clear that the implications of so profound a change in military technology are critical to the structure and function of the U.S. Armed Forces. In working toward a definitive answer, the authors of this volume make an important contribution to a debate whose resolution will shape the decades to come. Ervin J. Rokke Lieutenant General, United States Air Force President, National Defense University

An award-winning journalist uses landmark research to debunk the whole expert prediction industry, and explores the psychology of our obsession with future history. In 2008, experts predicted gas would hit \$20 a gallon; it peaked at \$4.10. In 1967, they said the USSR would be the world's fastest-growing economy by 2000; by 2000, the USSR no longer existed. In 1908, it was pronounced that there would be no more wars in Europe; we all know how that turned out. Face it, experts are about as accurate as dart-throwing monkeys. And yet every day we ask them to predict the future- everything from the weather to the likelihood of a terrorist attack. Future Babble is the first book to examine this phenomenon, showing why our brains yearn for certainty about the future, why we are attracted to those who predict it confidently, and why it's so easy for us to ignore the trail of outrageously wrong forecasts. In this fast-paced, example-packed, sometimes darkly hilarious book, journalist Dan Gardner shows how seminal research by UC Berkeley professor Philip Tetlock proved that the more famous a pundit

Acces PDF Rf Machine Learning Systems Rfmls Darpa

is, the more likely he is to be right about as often as a stopped watch. Gardner also draws on current research in cognitive psychology, political science, and behavioral economics to discover something quite reassuring: The future is always uncertain, but the end is not always near.

The author in this book using parameters and technical capabilities of Tactical Nuclear Weapons held by Pakistan constructs five possible scenarios for the foreseeable future. The outcome is interesting as it answers the fundamental question - are Pakistan's TNWs indeed the game changer they are being touted as or are we giving the devil more than his due?

Computer networks, which use wireless data connection between network nodes, are called wireless networks. Wireless telecommunication is achieved by radio communication. The different types of wireless networks are wireless personal area networks, wireless local area networks, wireless ad hoc networks, wireless metropolitan area networks, cellular networks, etc.

Wireless communication is used in terrestrial microwave, communications satellites, cellular and PCS systems, and free-space optical communication, besides many others. The topics included in this book on wireless networks are of the utmost significance and bound to provide incredible insights to readers. While understanding the long-term perspectives of the topics, it makes an effort in highlighting their impact as a modern tool for the growth of the discipline. In this textbook, constant effort has been made to make the

Acces PDF Rf Machine Learning Systems Rfmls Darpa

understanding of the difficult concepts of wireless networks as easy and informative as possible, for the readers.

Discover an insightful examination of the property investment appraisal process from leaders in the industry. This book explains the process of property investment appraisal: the process of estimating both the most likely selling price (market value) and the worth of property investments to individuals or groups of investors (investment value). Valuations are important. They are used as a surrogate for transactions in the measurement of investment performance and they influence investors and other market operators when transacting property. Valuations need to be trusted by their clients and valuers need to produce rational and objective solutions. Appraisals of worth are even more important, as they help to determine the prices that should be paid for assets, even in times of crisis, and they can indicate market under- or over-pricing. In a style that makes the theory as well as the practice of valuation accessible to students and practitioners, the authors provide a valuable critique of conventional valuation methods and argue for the adoption of more contemporary cash-flow methods. They explain how such valuation models are constructed and give useful examples throughout. They also show how these contemporary cash-flow methods connect market valuations with rational appraisals. The UK property investment market has been through periods of both boom and bust since the first edition of this text was produced in 1988. As a result, the book includes examples generated by vastly different market

Acces PDF Rf Machine Learning Systems Rfmls Darpa

states. Complex reversions, over-rented properties and leaseholds are all fully examined by the authors. This Fourth Edition includes new material throughout, including brand new chapters on development appraisals and bank lending valuations, heavily revised sections on discounted cash flow models with extended examples, and on the measurement and analysis of risk at an individual property asset level. The heart of the book remains the critical examination of market valuation models, which no other book addresses in such detail. This book offers a timely reflection on the remarkable range of algorithms and applications that have made the area of deep learning so attractive and heavily researched today. Introducing the diversity of learning mechanisms in the environment of big data, and presenting authoritative studies in fields such as sensor design, health care, autonomous driving, industrial control and wireless communication, it enables readers to gain a practical understanding of design. The book also discusses systematic design procedures, optimization techniques, and validation processes. Is real property appraisal evolving, or have all of the "big ideas" already been conceived? This question has been circulating among the leaders of the Appraisal Institute during the past several annual meetings, usually encountering little in the way of satisfying answers. This is not too surprising, because grand ideas and new knowledge do not typically evolve from off-hand conversation. They are the product of focused intellectual activity and hours of difficult work. This unquenched thirst for new knowledge is the primary

Acces PDF Rf Machine Learning Systems Rfmls Darpa

reason for assembling this collection of new manuscripts dealing with valuation theory, which was financially underwritten by the Appraisal Institute. Their generosity and willingness to partner with the American Real Estate Society made this collection of thoughtful and thought provoking essays possible. They are the result of a global response to a worldwide call for papers, and demonstrate that real estate valuation is indeed an international discipline. The United States, Australia and New Zealand, Southeast Asia, the Pacific Rim, and Europe are all represented by this impressive collection of authors. Together, the eighteen essays that make up this volume demonstrate that there are a sufficient number of "big ideas" to challenge and improve the appraisal profession for years to come. Real Estate Valuation Theory is organized around five categories of intellectual contribution to the whole-appraiser decision making and valuation accuracy, application of nontraditional appraisal techniques such as regression and the minimum-variance grid method, appraising contaminated property, ad valorem tax assessment, and new perspectives on traditional appraisal methods. One common thread is that all of the papers are exceptionally well written and thought provoking.

Cooperative and Cognitive Satellite Systems provides a solid overview of the current research in the field of cooperative and cognitive satellite systems, helping users understand how to incorporate state-of-the-art communication techniques in innovative satellite network architectures to enable the next generation of satellite systems. The book is edited and written by top

Access PDF Rf Machine Learning Systems Rfmls Darpa

researchers and practitioners in the field, providing a comprehensive explanation of current research that allows users to discover future technologies and their applications, integrate satellite and terrestrial systems and services to create innovative network architectures, understand the requirements and possibilities for future satellite communications standards and protocols, and evaluate the feasibility and practical constraints involved in the deployment process. Provides a solid overview of the current research in the field of co-operative and cognitive satellite systems Presents concepts in multibeam and multicarrier joint processing and high performance random access schemes Explains hybrid and dual satellite systems, cognitive broadband satellite systems, spectrum exploitation, and resource allocation Presentation of new technologies and techniques that significantly advance radar system capabilities for ground penetration, land, ocean, air, space and astronomy applications Innovative system applications in air defense, anti missile, imaging, and mobile are encouraged Technology areas such as radar, wideband, MIMO, and antenna signal processing, hardware and devices, materials, lasers, scattering, big data processing, architectures, multi function operation, and multi site coordination are all appropriate In addition to the presentation of contributed technical papers in high quality oral and poster sessions, the committee is planning a conference agenda that includes invited talks from leading experts within our community, an excellent selection of tutorials, exhibits, and informal gatherings for colleagues to share ideas

Automatic modulation recognition is a rapidly evolving area of signal analysis. In recent years, interest from the academic and military research institutes has focused around the research and development of modulation recognition algorithms. Any communication intelligence (COMINT) system comprises three main blocks: receiver front-end, modulation recogniser and output stage.

Considerable work has been done in the area of receiver front-ends. The work at the output stage is concerned with information extraction, recording and exploitation and begins with signal demodulation, that requires accurate knowledge about the signal modulation type. There are, however, two main reasons for knowing the current modulation type of a signal; to preserve the signal information content and to decide upon the suitable counter action, such as jamming. Automatic Modulation Recognition of Communications Signals describes in depth this modulation recognition process. Drawing on several years of research, the authors provide a critical review of automatic modulation recognition. This includes techniques for recognising digitally modulated signals. The book also gives comprehensive treatment of using artificial neural networks for recognising modulation types. Automatic Modulation Recognition of Communications Signals is the first comprehensive book on automatic modulation recognition. It is essential reading for researchers and practising engineers in the field. It is also a valuable text for an advanced course on the subject.

Understanding and harnessing the persuasive powers of narrative is central to U.S. and international counter-

Acces PDF Rf Machine Learning Systems Rfmls Darpa

terrorism efforts. There is an urgent need to understand the narrative tactics of terrorist recruitment and an equal if not greater need to destabilize and exploit the weaknesses of those narratives. Maan makes a connection, unique to terrorism studies, between the mechanisms of colonizing narratives and psychological warfare aimed at the recruit. The power of both relies on misidentification, both types of narratives encourage individuals to take actions contrary to their best interests, and both are insidious: they are continued internally without the implementation of external physical force. While these narrative strategies have been powerful, Maan makes the argument, also unique to terrorism studies, that certain types of compositional structures lend themselves to manipulation and the weakness of those structures can be exploited from a security standpoint.

The education of the real estate professional is changing and aligning itself more closely with the world of business. This book takes a new approach to property appraisal by exploring the pricing mechanism in this changing context. It: * develops the notion of the pricing mechanism in relation to property * covers practical issues of comparison and the real problems in applying valuation theory * explores calculations - including social and environmental worth - ignored in other texts As real estate professionals now advise both on strategic and operational aspects of built assets, they must take into account practices of other investment markets and see investors as competitors to owner-occupiers. Both owner-occupiers and investors have to assess accurately how their buildings perform but also be aware of wider sustainability issues, and social and

Acces PDF Rf Machine Learning Systems Rfmls Darpa

environmental responsibilities. Real Estate Appraisal: from value to worth meets these new demands by examining the latest techniques of the marketplace; developing an understanding of both market appraisal and worth; and highlighting the emerging role of sustainability as a driver for decision-making in real estate. Written by a group of highly experienced lecturers and professionals at the cutting edge of investment practice, the book has an accessible style and authoritative coverage, for both students and practitioners facing changes in established ways of working. For supporting material please go to www.blackwellpublishing.com/sayce

The book series "Smart Computing Applications" provides a platform for researchers, academicians and practitioners to exchange ideas on recent theoretical and applied data science and computing technologies research, with a particular attention to the possible applications of such technologies in the industry, especially in the field of mechanical and industrial engineering. This series serves as a valuable resource for graduate, postgraduate, doctoral students, researchers, academicians and industry professionals.

A classic textbook that has guided generations of students through the intricacies of property valuation, *The Income Approach to Property Valuation* remains a keen favourite amongst students and teachers alike. This new edition has been thoroughly revised and updated to meet the increasingly international perspectives of modern Real Estate students. The links between theory and practice are clearly demonstrated throughout, with a range of new international case studies and practice-based examples. *The Income Approach to Property Valuation* teaches readers: how to analyse market rents and sales prices to derive market evidence to support an opinion of market value; the investment method of valuation and how it is applied in

Acces PDF Rf Machine Learning Systems Rfmls Darpa

practice; how specific legal factors can impact on market value when they interfere with market forces; what the market and the profession may consider to be the 'right' methodology in today's market place; and how to use spreadsheets in valuation. This extensively revised new edition is perfect both for students on Real Estate courses worldwide and for professional candidates working towards their final assessment of professional competence (APC) for the Royal Institution of Chartered Surveyors, needing to demonstrate a valuation competence at levels 2 and 3.

Smart Cities and Artificial Intelligence offers a comprehensive view of how cities are evolving as smart ecosystems through the convergence of technologies incorporating machine learning and neural network capabilities, geospatial intelligence, data analytics & visualization, sensors, and smart connected objects to name a few. These recent advances in AI move us closer to developing operating systems that simulate human, machine, and environmental patterns from transportation infrastructure to communication networks. Understanding cities as real-time, living, dynamic systems coupled with new tools including generative design allows readers to plan, manage, and optimize city operations, making cities more efficient and sustainable with the ultimate goal of becoming self-regulating. Smart Cities and Artificial Intelligence provides a transdisciplinary, integrated approach, using theoretical and applied insights to examine how the digital and physical worlds are converging and how a new combination of human and machine intelligence is capable of transforming the experience of the urban environment. It provides a fresh holistic perspective on smart cities through an interconnect stream of theory, methodology, system architecture, and the application of Smart City Functions to define an integrated process of the design, planning, and implementation of smart cities.

Ann Macintosh Napier University, UK The papers in this volume are the refereed application papers presented at ES2001, the Twenty-first SGES International Conference on Knowledge Based Systems and Applied Artificial Intelligence, held in Cambridge in December 2001. The scope of the application papers has expanded over recent years to cover not just innovative applications using traditional knowledge based systems, but also to include applications demonstrating the whole range of AI technologies. These papers continue to illustrate the maturity of AI as a commercially viable technology to solve real world problems. The papers were subject to refereeing by at least two expert referees. All papers that were in any way controversial were discussed in depth by the Application Programme Committee. For the ES2001 Application Stream, a paper is acceptable even if it describes a system that has not yet been installed, provided the application is original and the paper discusses the kind of things that would help others needing to solve a similar problem. Papers have been selected to highlight critical areas of success - and failure - and to present the benefits and lessons learnt to other developers. This volume contains sixteen papers describing deployed or emerging applications in a range of diverse areas: business and commerce, engineering, manufacturing, knowledge and information management, and music.

Considers how the information revolution is creating a revolution in military affairs that will fundamentally change the way U.S. forces fight . . . supported by a system of systems Ó that will give U.S. forces superior battlespace awareness. Chapters: precision-guided munitions; precision location; a world of sensors; the potential proliferation of the revolution in military affairs; standoff warfare; coalition structures; prospects for the grid; defining the grid; knowledge maintenance; access; security; difficulties of top-down

Acces PDF Rf Machine Learning Systems Rfmls Darpa

integration; cutting to the core; planning, experimentation, & technology development; & opportunities for bottom-up integration.

This book takes a cross-disciplinary and cross-cultural look at mass appraisal expertise for property valuation in different market conditions, and offers some cutting-edge approaches. The editors establish an international platform and present the scientific debate as well as practical feasibility considerations. Heretic and orthodox valuation methods are assessed based on specific criteria, partly technical and partly institutional. Methodological evaluation is approached using two types of criteria: operational concerns about how to determine property value differentials between spatial and functional units of real estate in a valid and reliable way (technical criteria); and the kind of market circumstances being operated in (institutional criteria). While technical criteria are relatively well-researched, there is little theoretically informed work on the connection between country context and selection of property appraisal methods. The book starts with an examination of current mass property appraisal practices, presenting case studies from widely differing markets - from the American and Dutch, where regression-based methods have been used successfully for some time; to the Eastern European and other emerging economies, where limitations have to be compensated by focusing on the modelling assumptions. The second part of the book looks at sophisticated modelling approaches, some of which represent combinations of elements from two or more techniques. Whatever the exact modelling approach, the requirements are always high for the quality of the data and suitability of the method. In the final section, methods are evaluated and compared according to technical criteria and against institutional contexts. With its exceptionally wide coverage of valuation issues, *Mass Appraisal Methods: an*

Acces PDF Rf Machine Learning Systems Rfmls Darpa

international perspective for property valuers addresses property valuation problems common to different countries and approaches applicable in both developed and emerging economies.

Autocorrelation occurs whenever a variable exhibits a regular pattern over space, when its values at a set of locations depend on values of the same variables at other locations. Odland introduces spatial autocorrelation to the reader in a concise and readable fashion, and describes the statistical p.

Contemporary wars are largely wars of influence and they will not necessarily be won by those with the most information or the most accurate data. They will be won by those effectively tell the meaning of the information and what difference it makes for the audience.

The book compiles efficient design and test methodologies for the implementation of reversible logic circuits. The methodologies covered in the book are design approaches, test approaches, fault tolerance in reversible circuits and physical implementation techniques. The book also covers the challenges and the reversible logic circuits to meet these challenges stimulated during each stage of work cycle. The novel computing paradigms are being explored to serve as a basis for fast and low power computation.

This book presents selected papers from the 18th IEEE International Conference on Machine Learning and Applications (IEEE ICMLA 2019). It focuses on deep learning networks and their application in domains such as healthcare, security and threat detection, fault diagnosis and accident analysis, and robotic control in industrial environments, and highlights novel ways of using deep neural networks to solve real-world problems. Also offering insights into deep learning architectures and algorithms, it is an essential reference guide for academic researchers, professionals, software

Acces PDF Rf Machine Learning Systems Rfmls Darpa

engineers in industry, and innovative product developers. The third edition of Property Valuation Techniques offers a comprehensive and student-friendly exploration of the application of property valuation and appraisal techniques. Thoroughly revised and re-structured, it covers topics including risk, residential lease extensions, enfranchisement and cash flows. This third edition - provides more material on sustainability in relation to property value - uses a wealth of worked examples to apply theory to real-world problems - includes tips on how to structure appraisals in Excel® spreadsheets - features self-assessment questions to test and reinforce your understanding Detailed yet accessible, Property Valuation Techniques is ideal reading both for those students new to the subject and those looking to extend their knowledge, and for practitioners looking to refresh and develop their understanding of property valuation.

All aspects of radar systems for civil and defence applications John Boyd is often known exclusively for the so-called 'OODA' loop model he developed. This model refers to a decision-making process and to the idea that military victory goes to the side that can complete the cycle from observation to action the fastest. This book aims to redress this state of affairs and re-examines John Boyd's original contribution to strategic theory. By highlighting diverse sources that shaped Boyd's thinking, and by offering a comprehensive overview of Boyd's work, this volume demonstrates that the common interpretation of the meaning of Boyd's OODA loop concept is incomplete. It also shows that Boyd's work is much more comprehensive, richer and deeper than is generally thought. With his ideas featuring in the literature on Network Centric Warfare, a key element of the US and NATO's so-called 'military transformation' programmes, as well as in the debate on Fourth Generation Warfare, Boyd continues to exert a strong influence on Western military thinking. Dr

Acces PDF Rf Machine Learning Systems Rfmls Darpa

Osinga demonstrates how Boyd's work can help us to understand the new strategic threats in the post- 9/11 world, and establishes why John Boyd should be regarded as one of the most important (post)modern strategic theorists.

The IEEE European Symposium on Security and Privacy (EuroS&P) is the European sister conference of the established IEEE S&P symposium. It is a premier forum for computer security research, presenting the latest developments and bringing together researchers and practitioners. We solicit previously unpublished papers offering novel research contributions in security or privacy. The emphasis is on building or attacking real systems, even better if actually deployed, rather than presenting purely theoretical results. Papers may present advances in the design, implementation, analysis, verification, or empirical evaluation and measurement of secure systems. Papers that shed new light on past results by means of sound theory or thorough experimentation are also welcome.

The world has still to emerge fully from the housing-triggered Global Financial Crisis, but housing crises are not new. The history of housing shows long-run social progress, littered with major disasters; nevertheless the progress is often forgotten, whilst the difficulties hit the headlines. Housing Economics provides a long-term economic perspective on macro and urban housing issues, from the Victorian era onwards. A historical perspective sheds light on modern problems and the constraints on what can be achieved; it concentrates on the key policy issues of housing supply, affordability, tenure, the distribution of migrant communities, mortgage markets and household mobility. Local case studies are interwoven with city-wide aggregate analysis. Three sets of issues are addressed: the underlying reasons for the initial establishment of residential neighbourhoods, the processes that generate growth, decline and patterns of

Acces PDF Rf Machine Learning Systems Rfmls Darpa

integration/segregation, and the impact of historical development on current problems and the implications for policy.

WIFS is the annual flagship workshop organized by the IEEE Information Forensics and Security (IFS) Technical Committee. Its major goal is to bring together researchers in the field to foster ideas exchange and to allow cross fertilization among researchers working in the different areas of information security. At the same time, WIFS intends to attract researchers traditionally not being part of the IFS community, while working in the forensic and security areas, thus broadening the scope of the workshop. In this respect, WIFS will serve as a powerful instrument for community building. WIFS will feature keynotes, tutorials, special sessions, lecture & poster sessions, and demo Smart Cities and Artificial Intelligence.

CCWC 2020 will provide an opportunity for researchers, educators and students to discuss and exchange ideas on issues, trends, and developments in Computing and Communication. The conference aims to bring together scholars from different disciplinary backgrounds to emphasize dissemination of ongoing research in the fields of in Computing and Communication. Contributed papers are solicited describing original works in the above mentioned fields and related technologies. The conference will include a peer reviewed program of technical sessions, special sessions, business application sessions, tutorials, and demonstration sessions. All accepted papers will be presented during the parallel sessions of the Conference and papers will be submitted for publication at IEEE Xplore Digital Library. This conference will also promote an intense dialogue between academia and industry to bridge the gap between academic research, industry initiatives, and governmental policies.

Acces PDF Rf Machine Learning Systems Rfmls Darpa

This special volume on Materials Integration is based upon peer-reviewed papers selected from those presented at the International Symposium on the Global COE program, in conjunction with the 2nd International Symposium on Advanced Synthesis and Processing Technology for Materials (ASPT2011) and the 8th Materials Science School for Young Scientists, Institute for Materials Research, Tohoku University (Kinken-Wakate 2011). Volume is indexed by Thomson Reuters CPCI-S (WoS). This volume covered the principal research fields of (i) Infrastructural and Bio-materials, (ii) Electronic materials, (iii) Energy and Environmental materials and (iv) Basic materials science. Materials integration is expected to produce a synergistic effect and permit the development and production of non-conventional materials exhibiting new functionalities.

Now in its 38th year, MILCOM attracts decision makers from government, military, academia, and industry. The conference, being held this November 12-14 in Norfolk Virginia, gathers military and government communications subject matter experts from around the globe to conduct in depth discussions about the latest in technology advancements. MILCOM is an ideal forum for industry to demonstrate the application of these technologies and to promote products and services that provide reliable solutions to today's mission critical challenges.

An introductory, first year text on property valuation with a clear, well-defined structure based around the five valuation methods.
