This volume is a monograph of the 47 species of the Dulcamaroid clade of the large and diverse genus *Solanum*. Species in the group occur in North, Central and South America, and in Europe and Asia. The group is most species-rich in Peru and Brazil, and three of the component species, *Solanum laxum* of Brazil, *Solanum seforthianum* of the Caribbean and *Solanum crispum* of Chile are cultivated in many parts of the world. All species are illustrated and a distribution map of each is provided. All names are typified and nomenclatural and bibliographic details for all typifications presented. One new species from Ecuador is described. The monograph is the first complete taxonomic treatment of these species since the worldwide monograph of *Solanum* done by the French botanist Michel-Felix Dunal in 1852. It s something we all dread; the knock at the door from a Traffic Cop. We instantly fear the worst and for more than 3,000 families every year in Britain that fear sadly becomes a reality. The Police officer has come to deliver the news that their loved one has died in a road incident. But what happens after they have been told? Does the Police officer simply walk away? Is the family left to fend for itself? Thankfully not. A small group of specially trained Police Family Liaison Officers (FLO s) do what most of us could never do. They guide the bereaved family through the entire process, from delivering the trauma message in the first place, to helping them through the ordeal of identifying their loved one at the mortuary, right through to the inquest or court case in 12 months time and everything in between. PC Steve Woodward describes the journey the families embark upon as the biggest roller coaster ride of their lives with more highs and lows than you could ever possibly imagine.

Motores alternativos de combustion interna ha sido concebido para proporcionar al lector una vision general de las diferentes partes y subsistemas de los motores alternativos de combustion interna, tanto de aplicacion a plantas de traccion motriz para vehiculos como a plantas estacionarias para generacion de energia electrica. Su objetivo basico es cubrir las necesidades bibliograficas para el seguimiento de las asignaturas Ingenieria y Maquinas Termicas y Ampliacion de Motores Termicos, que se imparten en las escuelas de ingenieria industrial. Asimismo, pretende ofrecer una vision horizontal de las diferentes partes y subsistemas que conforman la maquina alternativa de combustion interna. Los tres primeros capitulos introducen al lector en la problematica de la transformacion de energia desde una fuente primaria hasta su forma final en trabajo mecanico en un eje

de rotacion. En los capitulos siguientes, se analizan los aspectos concretos de la maquina alternativa que nos ocupa, que, dado su funcionamiento pulsante, se estructuran en una fase cerrada, en la que el volumen del cilindro esta cerrado al exterior y se desarrollan los procesos para la generacion de trabajo (compresion, aportacion de calor y expansion), y una fase abierta, en la que el volumen del cilindro esta abierto al exterior para realizar los procesos de renovacion de la carga; ambas fases se dan tanto en los motores de encendido por compresion (MEC) como en los de encendido por chispa (MEP). Los capitulos finales ofrecen una vision mecanica del mecanismo transformador utilizado en los que se describe su arquitectura mecanica y el detalle de su funcionamiento.
