Although more widely utilized in Europe and other parts of the world, musculoskeletal ultrasound is gaining wider acceptance in this country not only because of its ability to image anatomic structures but also because of its low cost compared with magnetic resonance. Reviewed in this issue is imaging of common tendon and muscle injuries of the upper and lower extremities, the rotator cuff, musculoskeletal infections, nerve abnormalities, soft tissue masses, and hernias among others. Also covered are the use of ultrasound in joint aspiration and percutaneous interventional procedures.

A reassessment of the precedents, course, and legacy of the Reformation has occurred in the present generation of academic writing. This collection of essays brings together research by established and new scholars on themes of the Reformation with a particular focus on its antecedents and legacies in the Anglican tradition. Utilizing a diversity of topics, approaches, and methods, this book adds measurably to our knowledge of the place of the Reformation in Britain and Ireland as well as its European, North American, and African particularities.

Exploring a variety of themes, this collection examines the Reformation in relation to key aspects of church organization, belief, sacrament, conversion, relationships with other denominations, theological education, church and state, worship, and issues of resilience and decline. While these themes are pursued broadly, there is a particular focus on the context of the Anglican tradition in terms of Reformation preoccupations and concerns. This collection's thematic content, chronological span, and geographical range will also challenge accepted views, deepen understanding, and highlight new areas of enquiry, bringing new research and insights to bear on established observations. Academics will find this book of particular interest for courses on the Reformation, Early Modern Europe, and the history of Christianity. Earnest, awkward and painfully shy, sixteen-year-old Assaf is having the worst summer of his life. With his big sister gone and his best friend suddenly the most popular kid in their class, Assaf spends his days at a lowly summer job in Jerusalem City Hall and his evenings alone, watching television and playing games on the Internet. One morning, Assaf's routine is interrupted by an absurd assignment: to find the owner of a stray yellow labrador. Meanwhile on the other side of the city, Tamar, a talented singer with a lonely, tempestuous soul, undertakes an equally unpromising mission: to rescue a young drug addict from the Jerusalem underworld ... and, eventually, to find her dog. This "forum for self-exploration" ("New York Times") offers a unique perspective on career success that builds on unlocking personal creativity to achieve professional goals.

Functional limitations--in a person's ability to eat or walk, for example. Disability as the interaction between a person's pathologies, impairments, and functional limitations and the surrounding physical and social environments. This landmark volume will be of special interest to anyone involved in rehabilitation science and engineering: federal policymakers, rehabilitation practitioners and administrators, researchers, and advocates for persons with disabilities.

The way nurses are taught is constantly evolving and changing. Workplace learning is seen as key to developing practitioners. In this book Jenny Spouse discusses how students learn in a range of different clinical settings and how best to facilitate this process. How do students learn to become nurses? What knowledge and understanding do they need to acquire? How do their preconceptions, beliefs about the learning process, and social needs affect their development? What do they find helpful and unhelpful? What makes clinical settings good for learning? Is it helpful for students to document their learning? What are the best ways for lecturer/ practitioners to facilitate student learning and what other factors influence their progress? The book explores how professional development can be better understood, following the progress of six nurse learners drawn from different parts of nursing and investigating both those difficulties faced by all students and those issues unique to particular students. It places these narratives in the context of nurse education today, exploring the implications of 'Fitness for practice' and 'Making a difference', and looking at the implications for the future development, organisation and funding of nurse education.

The past few years have witnessed widespread acceptance of the notion that few elderly individuals are willing to stand by silently in the process of growing, and to relinquish whatever actual controls, autonomy or control beliefs they had in the past. Increasingly, old age is viewed as the dynamics of growth in mastery, control and self-efficacy, on the one hand, and a relative decline in psychological and physical resources on the other. It is the intent of this volume to communicate both aspects of these changes, and to offer a comprehensive review of the cross-fertilization of the field of gerontology and the psychology of reactance, freedom and control. Leading psychologists and social science researchers from the United States, Canada and Europe give their views on the meaning and application of control-related constructs having specific implications for the field of human aging. They address themselves to one or more of the major themes, issues or concerns which currently figure in discussions of control beliefs and control constructs as they apply to aging and old age. Written primarily for scholars, researchers and developmental theorists interested in the complexities and generativity of control constructs and their applications for the psychological well-being of older adults, the data and issues presented will be equally informative to gero-psychologists and mental health professionals concerned with healthy adaptive functioning of the elderly.

"The very name of 'Judas' raises among Christians an instinctive reaction of criticism and condemnation...The betrayal of Judas remains...a mystery." —Pope Benedict XVI, October 2006 The Gospel According to Judas, by Benjamin Iscariot sheds new light on the the mystery of Judas—including his motives for the betrayal and what happened to him after the crucifixion—by retelling the story of Jesus through the eyes of Judas, using the canonical texts as its basic point of reference. Ostensibly written by Judas's son, Benjamin, and following the narrative style of the Gospels, this re-creation is provocative, compelling, and controversial. The Gospel According to Judas, by Benjamin Iscariot is the result of an intense collaboration between a storyteller and a scholar: Jeffrey Archer and Francis J. Moloney. Their brilliant work—bold and simple—is a compelling story for twenty-first-century readers, while maintaining an authenticity that would be credible to a first-century Christian or Jew.
