Opening in Calcutta in the 1960s, Amitav Ghosh's radiant second novel follows two families -- one English, one Bengali -- as their lives intertwine in tragic and comic ways. The narrator, Indian born and English educated, traces events back and forth in time, from the outbreak of World War II to the late twentieth century, through years of Bengali partition and violence, observing the ways in which political events invade private lives.

Widely praised for its accessibility and its concentration on the metaphysical issues that are most central to the history of Greek philosophy, this book offers a valuable introduction to the works of the Presocratics, Plato, and Aristotle.

Right from its formal introduction in India in 1835, through Thomas B. Macaulay's Minute, English has been intrinsically linked with the employment prospects of Indians. During their regime, the British promoted English education to fulfil the requirement of English-knowing Indians for administrative purposes. Owing to globalization, the last few years have witnessed the opening up of thousands of lucrative job opportunities for graduates proficient in English. English has gained importance in India as the language of opportunities. In colonial India, English education was a passport to government jobs, while in the twenty-first century, proficiency in English is essential for private sector jobs. This book examines the development of curricula in English in Indian universities vis-a-vis the needs of second language learners studying in Special English programmes of Bachelor of Arts (BA). It also reflects on how globalization has strengthened the connection between English and employment.

Tracing unexplored connections between nineteenth-century astronomy and literature, *The Starry Sky Within* offers a new understanding of literary point of view as essentially multiple, mobile, and comparative. Nineteenth-century astronomy revealed a cosmos of celestial systems in constant motion. Stars, comets, planets, and moons coursed through space in complex and changing relation. As the skies were in motion, so too was the human subject. Astronomers

showed that human beings never perceive the world from a stable position. The mobility of our bodies in space and the very structure of stereoscopic vision mean that point of view is neither singular nor stable. We always see the world as an amalgam of fractured perspectives. In this innovative study, Henchman shows that the reconceptualization of the skies gave poets and novelists new spaces in which to indulge their longing to escape the limitations of individual perspective. She links astronomy and optics to the form of the multiplot novel, with its many centers of consciousness, complex systems of relation, and criss-crossing points of view. Accounts of a world and a subject both in relative motion shaped the form of grand-scale narratives such as *Tess of the D'Urbervilles*, *Bleak House*, and *Daniel Deronda*. De Quincey, Tennyson, and Eliot befriended leading astronomers and visited observatories, while Hardy learned about astronomy from the vast popular literature of the day. These writers use cosmic distances to dislodge their readers from the earth, setting human perception against views from high above and then telescoping back to earth again. What results is a new perception of the mobility of point of view in both literature and science.
