In Asia, Distance Education (DE) is providing major solutions in the areas of education and training. DE methods that are standard in other parts of the world, however, have yet to demonstrate their full potential in Asia. Covering nine DE projects by 39 researchers from 13 countries, this book analyses the DE scenario in Asia, the successes, the failures and the reasons behind them. This book is a unique collation of the results of studies of educational technologies across an extensive network of Asian countries. It also provides a useful snapshot of DE's development in Asia in the early years of the 21st century. The surveys reported cover different DE contexts, methodologies, and levels of generalisability, and add to the existing scholarship on the subject by providing previously unavailable, firm evidence about DE's prospects in Asia. The contributors give important recommendations that can be translated into practical and political actions to help solve critical socio-economic problems of Asia as well as other parts of the world.

The first two decades of the 21st century have contributed a growing body of research, theorisation and empirical studies on learning and work. This Handbook takes the consideration of this topic into a new realm, moving beyond the singular linking of identity, learning and work to embrace a more holistic appreciation of learners and their life-long learning. Across 40 chapters, learners, learning and work are situated within educational, organisational, social, economic and political contexts. Taken together, these contributions paint a picture of evolving perspectives of how scholars from around the world view developments in both theory and practice, and map the shifts in learning and work over the past two decades. Part 1: Theoretical perspectives of learning and work Part 2: Intersections of learning and work in organisations and beyond Part 3: Learning throughout working lives and beyond Part 4: Issues and challenges to learning and work

This invaluable handbook by seasoned educators reviews test content and provides study strategies to aspiring teachers who are preparing for the Pedagogy and Professional Responsibilities TExES exam. The purpose of this mixed methods study was to identify and describe the body of occupational therapists, physical therapists, and speech-language pathologists and the therapy assistants from each profession who work in neonatal intensive care units across the U.S.; the practice settings in which they work; their educational backgrounds and professional preparation to practice in the NICU; and their interest in pursuing neonatal therapy national certification. To date, there has never been a comprehensive study of neonatal therapy nor the therapy professionals working in this practice area in the United States (U.S.). Invitations to participate in this web-based survey were disseminated via email, social media, and direct contact through phone calls. The survey received 482 responses with therapists from 266 hospitals across all 50 states represented in the data. The outcomes of this study reveal that there is insufficient standardization in clinical training and preparedness for therapy professionals practicing in the NICU, and variable adherence to the guidelines for education and training established by the governing national bodies of occupational therapy, physical therapy, and speech-language pathology professions. The results of this study indicate that moving forward with the creation of neonatal therapy national certification is a valid next step. Continued research is needed to identify the specific knowledge, skills, abilities, practice responsibilities, critical tasks, risks, and practice context for the purpose of developing assessment measures, test blue prints, and examination questions in line with the creation of neonatal therapy national certification requirements.

The SAGE Handbook of Curriculum and Instruction emerges from a concept of curriculum and instruction as a diverse landscape defined and bounded by schools, school boards and their communities, policy, teacher education, and academic research. Each contributing author was asked to comprehensively review the research literature in their assigned topic. These topics, however, are defined by practical places on the landscape e.g. schools and governmental policies for schools. Key Features: o Presents a different vision or re-conceptualization of the field o Provides a comprehensive and inclusive set of authors, ideas, and topics o Takes a global rather than North American parochial approach o Recognizes that curriculum and instruction is broader in scope than is suggested by university research and theory o Reflects post-1992 changes in curriculum policy, practice and scholarship o Represents a rethinking of how school subject matter areas are treated. Teacher education is included in the Handbook with the intent of addressing the role and place of teacher education in bridging state and national curriculum policies and curriculum as enacted in classrooms.
