Yoga, karma, meditation, guru—these terms, once obscure, are now a part of the American lexicon. Combining Hinduism with Western concepts and values, a new hybrid form of religion has developed in the United States over the past century. In *Transcendent in America*, Lola Williamson traces the history of various Hindu-inspired movements in America, and argues that together they constitute a discrete category of religious practice, a distinct and identifiable form of new religion. Williamson provides an overview of the emergence of these movements through examining exchanges between Indian Hindus and American intellectuals such as Thomas Jefferson and Ralph Waldo Emerson, and illuminates how Protestant traditions of inner experience paved the way for Hindu-style movements' acceptance in the West. Williamson focuses on three movements—Self-Realization Fellowship, Transcendental Meditation, and Siddha Yoga—as representative of the larger of phenomenon of Hindu-inspired meditation movements. She provides a window into the beliefs and practices of followers of these movements by offering concrete examples from their words and experiences that shed light on their world view, lifestyle, and relationship with their gurus. Drawing on scholarly research, numerous interviews, and decades of

personal experience with Hindu-style practices, Williamson makes a convincing case that Hindu-inspired meditation movements are distinct from both immigrant Hinduism and other forms of Asian-influenced or “New Age” groups.

Vidarbha—the parched heartland of central India—has become the foremost site of farmer suicides in the country. These suicides are the most striking indictment of the neglect of agriculture by the state. But the story of the farmers' distress does not end with their death—it lives on in the experience of their widows who struggle to survive in the shadows. *Widows of Vidarbha* tells the story of 16 such widows who have been invisible to the state, the community, and even their families, and talks of their lost dreams, their diminished worldviews, and their helpless surrender to the conveniences of patriarchy. These narratives throw light on the dark and desperate corners of their invisible world, one that reflects the state of farm widows across the country.

How did social, cultural and political events in Britain during the 2000s shape contemporary British fiction? The means of publishing, buying and reading fiction changed dramatically between 2000 and 2010. This volume explores how the socio-political and economic turns of the decade, bookended by the beginning of a millennium and an economic crisis, transformed the act of writing and reading. Through consideration of, among other things, the treatment of neuroscience, violence, the historical and youth subcultures in recent fiction, the essays in this collection explore the complex and still powerful relation between the novel and the world in which it is written, published and read. This major literary assessment of the fiction of the 2000s covers the work of newer voices such as Monica Ali, Mark Haddon, Tom McCarthy, David Peace and Zadie Smith as well as those more established, such as Salman Rushdie, Hilary Mantel and Ian McEwan making it an essential contribution to reading, defining and

understanding the decade.

This volume originates from the proceedings of a multidisciplinary conference, Techno-Societal 2016 in Maharashtra, India, that brings together faculty members of various engineering colleges to solve Indian regional relevant problems under the guidance of eminent researchers from various reputed organizations. The focus is on technologies that help develop and improve society, in particular on issues such as the betterment of differently abled people, environment impact, livelihood, rural employment, agriculture, healthcare, energy, transport, sanitation, water, education. This conference aims to help innovators to share their best practices or products developed to solve specific local problems which in turn may help the other researchers to take inspiration to solve problems in their region. On the other hand, technologies proposed by expert researchers may find applications in different regions. This back and forth process for local-global interaction will help in solving local problems by global approach and help in solving global problems by improving local conditions. The author of this volume, an accomplished philologist, historian and philosopher, analyzes the relevant earlier and later texts and traces the epistemological foundations of Pali canonical thought from the Vedic period onwards. Originally published in 1963, it sheds new light on later developments

and elucidates from the Indian point of view some of the basic problems of the conflict between metaphysics and logical and linguistic analysis.

Some postcolonial theorists argue that the idea of a single system of belief known as "Hinduism" is a creation of nineteenth-century British imperialists. Andrew J. Nicholson introduces another perspective: although a unified Hindu identity is not as ancient as some Hindus claim, it has its roots in innovations within South Asian philosophy from the fourteenth to seventeenth centuries. During this time, thinkers treated the philosophies of Vedanta, Samkhya, and Yoga, along with the worshippers of Visnu, Siva, and Sakti, as belonging to a single system of belief and practice. Instead of seeing such groups as separate and contradictory, they re-envisioned them as separate rivers leading to the ocean of Brahman, the ultimate reality. Drawing on the writings of philosophers from late medieval and early modern traditions, including Vijnanabhiksu, Madhava, and Madhusudana Sarasvati, Nicholson shows how influential thinkers portrayed Vedanta philosophy as the ultimate unifier of diverse belief systems. This project paved the way for the work of later Hindu reformers, such as Vivekananda, Radhakrishnan, and Gandhi, whose teachings promoted the notion that all world religions belong to a single spiritual unity. In his study, Nicholson also critiques the way in which Eurocentric concepts—like monism and dualism, idealism and realism, theism and atheism, and orthodoxy and heterodoxy—have come to dominate modern discourses on Indian philosophy.

Many people find the concept of fracture and damage mechanics to be somewhat problematic, mainly because, until recently, close attention in mechanics was focused especially on the

strength and resistance of materials. In this sense, to speak of fracture is as uncomfortable for some as it is to speak of a deadly disease. In confronting and preventing a fatal disease, one must understand its complexity, symptoms, and behavior; by the same token, in securing the strength of an engineering structure, one must understand the reasons and type of its potential failure. This book will provide knowledge and insights on this matter to its readers.

Written by internationally renowned academics, this volume provides a snapshot of the field of applied linguistics, and illustrates how linguistics is informing and engaging with neighbouring disciplines. It represents the best of current practice in applied linguistics, and will be invaluable to students and researchers looking for an overview of the field.

The Tribology and Design Conference explores the role of technology and design in the broader sense. It brings together colleagues from different disciplines interested in problems of surface interaction and design. The applications covered range from geomechanics to nano problems and from sustainability issues to advanced materials. It has never been so important for the designer to consider product and system durability in relation to reliability and sustainability issues. The topics for discussion also cover studies of tribology in nature and how the resulting lessons can be applied by the designers. Another important theme is the application of tribology in biomechanics, a field in which surface mechanics in general is of fundamental importance. This book contains the papers presented at the Third International Conference, arranged into the following subject areas: Design Tools; Test Methods; Surface Engineering; Tribology under Extreme Conditions; Surface Measurements & Lubrication.

Beginning with Thomas Edison's aggressive copyright disputes and concluding with recent lawsuits against YouTube, Hollywood's Copyright Wars follows the struggle of the film, television, and digital media industries to influence and adapt to copyright law. Though much of Hollywood's engagement with the law occurs offstage, in the larger theater of copyright, many of Hollywood's most valued treasures, from Modern Times (1936) to Star Wars (1977), cannot be fully understood without appreciating their legal controversies. Peter Decherney shows that the history of intellectual property in Hollywood has not always mirrored the evolution of the law and recounts these extralegal solutions and their impact on American media and culture.

Parashari Jaimini and Tajik are the three most popular systems of Vedic Astrology. Parashar gives more importance to the planets while Jaimini considers the rashis to be more important. Tajik is mainly used in Prashna Shastra and in Varshaphal. Tajik diverts slightly always from the main stream of the traditional methods and employs newer techniques of Astrology. 'Tajik Neelakanthi', of Acharya Neelakantha, which was composed in the 16th century AD, is the base of Taik Jyotish. This does not mean that Varshaphal and Prashna techniques were not practised in vedic Astrology before this. 'Uttar Kalamrit' of Kalidas mentions and describes the

computation of Varshaphal dasha which is different from the 'Mudda dasha' of Varshaphal. Apart from this, 'Shat Panchashikha' of Prithyushyas is the established classic of Prashna Shastra, which was composed centuries before 'Tajik Neelakanthi'. Ancient Kairaleeya Jyotish is also well known for considering Prashna to be their main technique. The influence of Greek and Arab culture is clearly seen on the word 'Tajik'. Arrival of the invaders from Western Asia initiated the exchange of culture between India and West Asia. This exchange introduced some newer techniques to our Vedic Astrology. One of these techniques was Tajik. This has been marked as the beginning of Tajik jyotish. Tajik word does not belong to Sanskrit. There are different opinions regarding this issue. Some scholars consider it to be a distorted form of the word 'Jatak'. Another view is that meaning of Tajik is a horse in Turkish and Persian language. The speed of this technique has been compared to that of a horse and for this reason it has been named Tajik. In any case the influence of Mohammedans on this knowledge is very clear. This is also confirmed by the other words of Tajik, namely mudda, muntha, sahas and the names of the Tajik yogas like Ithasal, Ikkabal, Ishraf, nakta, radda and khallasar etc. Moving at the average speed of 1° per day, Sun completes one round of the Zodiac in one year. For casting the annual horoscope we select the time when Sun reaches the longitude of the natal Sun. The horoscope cast for that date and time becomes the annual horoscope and the Varshaphal is decided on the basis of this horoscope. In a similar manner prediction for any year of the person's life can be given on the basis of the annual horoscope. In other words the annual horoscope is based on the longitude of the natal Sun and not on the date and time of birth. This also means that the date, day and time of the annual horoscope is generally different from that of the birth horoscope.

INSTANT NEW YORK TIMES and LOS ANGELES TIMES BESTSELLER “Brilliant... riveting, scary, cogent, and cleverly argued.”—Beth Macy, author of *Dopesick* As heard on Fresh Air This book is about pleasure. Globalisation is heavily dependent on physical transport, as people and goods travel over

longer distances and with higher frequency. Movement and mobility have become integrated parts of late modern identity and practice, and a state of flux can be sensed everywhere. Bringing together the latest interdisciplinary theoretical approaches with empirical case studies analysing and appraising innovative policies from Scandinavia, this volume demonstrates that mobility research is a key issue within social enquiry. It addresses three broad themes. Firstly, mobility as a constructed social reality, examining how individuals construct notions of mobility in their everyday life and practice. Secondly, mobility as spatial co-ordination and transgression, and finally, mobility as a policy theme, where the contributors explore recent developments in transport policy at national and European levels, suggesting ways forward for both research and policy. In the final section of the book new visions for research into sustainability and mobility are laid out.

The book analyses the origins of the idea of interference in the internal affairs of other states and preventive strike in international law, beginning with the Monroe Doctrine (1823). American diplomacy has not changed in principle in the last two centuries, and is still based on the Monroe doctrine. This is proven here through the study of the foreign policy of the vast majority of US presidents, from Monroe to Trump. As the book shows, one of the main tools of American domination throughout the world in the second half of the 20th century and the beginning of the 21st is the doctrine of the preventive strike and interference in the affairs of other states.

Everyday political business in early modern cities took place under many different sources of tension. De facto establishment of the oligarchy in the government collided with the urban community's expectations of participation and with the responsibility for common welfare which was supposed to be the guideline for policies in the municipal boards. *Urban Elections and Decision-Making in Early Modern Europe* offers new interpretations of the governmental techniques applied by urban elites to cope with these tensions. Written by leading historians of urban history and based on a broad foundation of previously unpublished research the volume explores the procedures of decision-making in early modern cities from an international and micrological point of

view. It examines the attempts of delegating and stabilising power through elections, asks for the different ways of developing and demonstrating consent or dissent within the cities' walls—urban revolts included—and offers a new theoretical framework to describe and understand these phenomena adequately.

The instant New York Times bestseller *The New York Times Best Selling* author of *The End of Alzheimer's* lays out a specific plan to help everyone prevent and reverse cognitive decline or simply maximize brainpower. In *The End of Alzheimer's* Dale Bredesen laid out the science behind his revolutionary new program that is the first to both prevent and reverse symptoms of Alzheimer's disease. Now he lays out the detailed program he uses with his own patients. Accessible and detailed, it can be tailored to anyone's needs and will enhance cognitive ability at any age. What we call Alzheimer's disease is actually a protective response to a wide variety of insults to the brain: inflammation, insulin resistance, toxins, infections, and inadequate levels of nutrients, hormones, and growth factors. Bredesen starts by having us figure out which of these insults we need to address and continues by laying out a personalized lifestyle plan. Focusing on the Ketoflex 12/3 Diet, which triggers ketosis and lets the brain restore itself with a minimum 12-hour fast, Dr. Bredesen drills down on restorative sleep, targeted supplementation, exercise, and brain training. He also examines the tricky question of toxic exposure and provides workarounds for many difficult problems. The takeaway is that we do not need to do the program perfectly but will see
