This classic study of the effect of unemployment and of the ways of relieving it upon actual, typical families of the 1930s and 1940s is a vivid, startling picture of the demoralizing influence and consequences of America's relief policies during the Depression years. The study comprises an incisive interpretation of the problem and a series of absorbing human interest stories of representative families on relief cases selected from experiences of relief, including the records of families from various religious groups in an exhaustive study conducted in New York City. Most research on unemployment of the 1930s conspicuously lacks studies of the unemployed themselves. Yet, this is the crux of the matter necessary to truly understand the

consequences of unemployment then and now, so as to deal with it intelligently and efficiently. This book deals with what employment does to people. It answers important questions about the unemployed that are rarely asked. Who are they? Did they fail to earn a living even in prosperous times? What precipitated their unemployment? Do they prefer relief to work? Did unemployment bring about changes in how they think and feel? This is a volume of continuing relevance, and will be of interest to legislators, economists, social scientists, social workers, and psychologists.

Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably
