The drivers of and potential solutions to AMR are complex, often spanning multiple sectors. The internationally recognized response to AMR advocates for a 'One Health' approach, which requires policies to be developed and implemented across human, animal, and environmental health.

It's a bitterly cold February in 1961, and Sandy Greenberg lies in a hospital bed in Detroit, newly blind. A junior at Columbia University from a Jewish family that struggled to stay above the poverty line, Sandy had just started to see the world open up to him. Now, instead of his plans for a bright future—Harvard Law and politics—Sandy faces a new reality, one defined by a cane or companion dog, menial work, and a cautious path through life. But that's not how this story ends. In the depth of his new darkness, Sandy faces a choice—play it “safe” by staying in his native Buffalo or return to Columbia to pursue his dreams. With the loving devotion of his girlfriend (and now wife) Sue and the selflessness of best friends Art Garfunkel and Jerry Speyer, Sandy endures unimaginable adversity while forging a life of exceptional achievement. From his time in the White House working for President Lyndon B. Johnson to his graduate studies at Harvard and Oxford under luminaries such as Archibald Cox, Sir Arthur Goodhart, and Samuel Huntington, and through the guidance of his invaluable mentor David Rockefeller, Sandy fills his life and the lives of those around him with a radiant light of philanthropy, entrepreneurship, art, and innovation.

Since the publication of the Institute of Medicine (IOM) report *Clinical Practice Guidelines We Can Trust* in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent

organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
