A noted author and activist brings his critical acumen and rhetorical skills to bear in this polemic against the dark side of religion. Unlike some popular works by stridently outspoken atheists, this is not a blanket condemnation of all believers. Rather the author's focus is the heartless exploitation of faithful followers by those in power, as well as sectarian intolerance, the violence against heretics and nonbelievers, and the reactionary political and economic collusion that has often prevailed between the upper echelons of church and state. Parenti notes the deleterious effects of past theocracies and the threat to our freedoms posed by present-day fundamentalists and theocratic reactionaries. He discusses how socially conscious and egalitarian minded liberal religionists have often been isolated and marginalized by their more conservative (and better financed) coreligionists. Finally, he documents the growing strength of secular freethinkers who are doing battle against the intolerant theocratic usurpers in public life. Historically anchored yet sharply focused on the contemporary scene, this eloquent indictment of religion's dangers will be welcomed by committed secular laypersons and progressive religionists alike.

Do you wonder how movies – sequences of static frames – appear to move, or why 3-D films look different from traditional movies? Why does ventriloquism work, and why can airliner flights make you feel disoriented? The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and related disciplines.

Usually on a Greyhound bus, right before his life falls apart again. Just like he planned. But this time it's complicated: there's a sadistic corporate climber who thinks she's his girlfriend, a rent-subsidized affair with his landlord's wife, and the bizarrely appealing deaf assistant to Shane's cosmically unstable dentist. When one of the women is murdered, and Shane is the only suspect who doesn't care enough to act like he didn't do it, the question becomes just how he'll clear the good name he never had and doesn't particularly want: his own. "The malaise of cubicle culture may be well-trodden comedic territory by now, but Neilan's debut skewers office life with a flourish for the grotesque." —The Village Voice
