Rethinking the future of India through automation. From scavenging to lunar missions, from railway factories to healthcare and even tax planning, automation is growing faster and deeper in India than is visible. In a country where more than a million people get ready for jobs every month, this rise in automation can appear as an unwelcome change or a threat to their livelihood. But the reality is that automation is enhancing efficiency, accuracy and accountability of India's working professionals in ways that haven't been seen before. Automation is helping generate information in a data-poor country. It is making India's private sector more active and government's functioning more transparent and reliable. Through several case studies of private enterprises and government departments, India Automated chronicles the transformation that India is undergoing and how robotics and process automation are infusing proficiency in our work and personal lives.

Automation is turning to be one of the most impactful results of the Fourth Industrial Revolution technologies in India. AI, drones, blockchain, cybersecurity, 3D printing, augmented and virtual reality include automated processes. These are also opening new categories of employment for job seekers. This book argues for deeper collaboration between industrial and government sectors to ensure that automation enhances India's steady growth while also mitigating its negative impact. With this forward-looking approach, Pranjali Sharma brings us face to face with the reality that it is imperative for India to align itself with this revolution.

As Industry 4.0 brings on a new bout of transformation and fundamental changes in various industries, the traditional manufacturing and production methods are falling to the wayside. Industrial processes must embrace modern technology and the most recent trends to keep up with the times. With "smart factories"; the automation of information and data; and the inclusion of IoT, AI technologies, robotics, and cloud computing comes new challenges to tackle. These changes are creating new threats in security, reliability, the regulations around legislation and standardization of technologies, malfunctioning devices or operational disruptions, and more. These effects span a variety of industries and need to be discussed. Research Anthology on Cross-Industry Challenges of Industry 4.0 explores the challenges that have risen as multidisciplinary industries adapt to the Fourth Industrial Revolution. With a shifting change in technology, operations, management, and business models, the impacts of Industry 4.0 and digital transformation will be long-lasting and will forever change the face of manufacturing and production. This book highlights a cross-industry view of these challenges, the impacts they have, potential solutions, and the technological advances that have brought about these new issues. It is ideal for mechanical engineers, electrical engineers, manufacturers, supply chain managers, logistics specialists, investors, managers, policymakers, production scientists, researchers, academicians, and students looking for cross-industry research on the challenges associated with Industry 4.0.

In the OECD-area states provide security business to be conducted through a legal-institutional framework where state institutions, working in a legal-rational, predictable and effective manner, are often taken for granted. Worldwide, however the situation is very different. Private actors seize public institutions and processes accumulating ever more power and private wealth by systematically abusing, side-stepping, ignoring and tailoring formal institutions to fit their interests. Such forms of 'state capture' are associated with specific political risks international businesses are confronted with when operating in these countries, such as institutional ambiguity, systematic favouritism and systemic corruption. This edited volume covers state capture, political risks and international business from the perspectives of Political
