The Enterprise Resource Planning Decade: Lessons Learned and Issues for the Future presents a collection of chapters written by various experts that share a interest in the ERP movement. This collection will generate much interest and contribute to the development of Enterprise-wide systems that provide true support to organizations and the development of methodologies that are less disruptive of organizational day-to-day business than is the case today. When ERP projects stop being the make or break ventures they can be and we stop getting these negative reports about failed implementation, the target will have been met and the ERP market will be less of a jungle than it is today.

The task of structuring information on built environment has presented challenges to the research community, software developers and the industry for the last 20 years. Recent work has taken advantage of Web and industry standards such as XML, OWL, IFC and STEP. Another important technology for the fragmented AEC industry is digital communication. Wired or wireless, it brings together architects, engineers and construction site workers, enabling them to exchange information, communicate and work together. Virtual enterprise organization structures, involving mobile teams over distance, are highly compatible with the needs of the construction industry.

Indonesian organizations are facing ever increasing competitive pressure within and between local companies but also from global competitors. Consequently, to defend local markets and indeed exploit growth opportunities in other regions, the management of human capital (the skills, competencies and mindsets of the employeebase) has become a performance imperative for Indonesian organizations. *Managing Human Capital in Indonesia: Best Practices in Aligning People with Strategic Goals* explains how Indonesian organizations can migrate the management of human capital from a tactical, personnel operation to a strategic capability. In the first instance this requires a substantive overhaul of the human resource function. Based on an analysis of Indonesian, Asian and global best practices in HR management, this book explains how HR functions are being reconfigured as Strategic HR functions. The book's step-by-step practical guidelines shows how HR professionals can gain a firm understanding of the strategic imperatives of the enterprise and use this knowledge to deploy effective HR interventions. Central to such interventions is the providing of strategically critical people goals, measures and targets within a corporate Balanced Scorecard. From this, the HR organization should then build its own dedicated HR scorecard that ensures that the work of all in the function is strategically focused. Using the Balanced Scorecard as an overarching strategy management framework. *Managing Human Capital in Indonesia: Best Practices in Aligning People with Strategic Goals* helps the reader master those HR interventions that are most critical to the success of the enterprise. The book describes how to build and deploy a robust process for identifying, nurturing and retaining talent—a turning platform for organizations across the globe—and how to implement best practice competency, training and coaching frameworks. Providing both

a helicopter view of improving enterprise performance as well as coming on developing that of the individual, the book shows how to ensure that people capabilities are hardwired to strategic goals through the shaping of individual Balanced Scorecards—from executive to front-line levels—that serve as the only appraisal system and that drive the application of appropriate bonus systems. The book also describes how Indonesian organizations can create a cadre of leaders that are capable of leading global enterprises and explains how to build a highperforming corporate culture. Reporting the findings of an exclusive survey of the HR practices of Indonesia-based organizations that was commissioned to support this book, *Managing Human Capital in Indonesia: Best Practices in Aligning People with Strategic Goals* provides a clear roadmap for readers to follow in the creation of a high-performing HR organization: a function that is seen as a strategic asset of the enterprise.

SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users should be based on the structure of this book.

The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is relevant for the client company. The data items that are not relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node.

Prototyping :As the structured dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed.

Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users. The Advanced Planner and Optimiser (APO) is the software from SAP dedicated to supply chain management. This book addresses the question of how to implement APO in a company. It is written from a long years' experience in implementation projects and provides project managers and team members with the necessary know-how for a successful implementation project. The focus is on introducing modeling approaches and explaining the structure and interdependencies of systems, modules and entities of APO. Another concern is the integration with the R/3 system(s), both technically and from a process point of view. Since

APO projects differ significantly from other SAP projects, some key issues and common mistakes concerning project management are covered.

Since SAP is emphasizing recent developments in operations management in its SCM initiative, this book describes the methodological background from the viewpoint of a company using SAP systems. It describes order processing both in an intra- and interorganizational perspective, as well as future developments and system enhancements.

This book constitutes the refereed proceedings of the Second International Conference on Cooperative Design, Visualization, and Engineering, CDVE 2005, held in Palma de Mallorca, Spain, in September 2005. The 28 revised full papers presented were carefully reviewed and selected from over 100 submissions. The papers cover all current issues in cooperative design, visualization, engineering, and other cooperative applications. Topics addressed are such as constraint maintenance, decision support, and security enforcement for CDVE. Case studies and application specific developments are among the cooperative visualization papers. Along the line of cooperative engineering, knowledge management, reconfigurability, and concurrency control are major issues addressed.

Paul Harman focuses on the process change problems faced by today's managers. He summarizes the state of the art of business process analysis, presents a methodology based on best-practices and offers detailed case studies.

Loss prevention engineering describes all activities intended to help organizations in any industry to prevent loss, whether it be through injury, fire, explosion, toxic release, natural disaster, terrorism or other security threats. Compared to process safety, which only focusses on preventing loss in the process industry, this is a much broader field. Here is the only one-stop source for loss prevention principles, policies, practices, programs and methodology presented from an engineering vantage point. As such, this handbook discusses the engineering needs for manufacturing, construction, mining, defense, health care, transportation and quantification, covering the topics to a depth that allows for their functional use while providing additional references should more information be required. The reference nature of the book allows any engineers or other professionals in charge of safety concerns to find the information needed to complete their analysis, project, process, or design.

"Geared for administrators and academicians trying to develop or improve distance education programs, this text addresses the specific challenges of the virtual learning environment, such as managing the costs incurred for remote space and equipment, adjusting traditional evaluation methods, and maintaining academic integrity. The most recent research on faculty perceptions, social needs of students, library services, online programs, and video instruction is provided."
