Personal Injury and Damage Ascertainment under Civil Law Santo Davide Ferrara,Rafael Boscolo-Berto,Guido Viel,2016-10-06 This volume serves to provide an international overview of personal injury compensation in different geographical areas (15 countries already included), with a special focus on the methods used to ascertain the injury and the related damages. It also goes on to clarify the logical and methodological steps required for a sequential, in-depth ascertainment of any traumatic event and the related personal damage, both pecuniary and non-pecuniary. Personal injury is a legal term for an injury to the body, mind or emotions suffered by the plaintiff under tort and/or civil law regulations. Damages related to the injury can be pecuniary or non-pecuniary in nature. Although several comparative studies and research projects on tort and civil law and personal injury claims aimed at developing new tools for promoting harmonization of private law have been performed at an international level, heterogeneity and divergences still exist in the definition and compensation of personal injury and damage across different national legislative systems. The starting point for any awarding procedure should be a medical, or rather a medico-legal, assessment to gain evidence on the trauma or event causing the injury, the mechanism of injury, the pre-existing health status of the injured party, and the health consequences of the injury (temporary and permanent impairment, work incapacity, etc.). In order to pursue the ultimate goal of an international harmonization of personal injury compensation, it is of utmost importance to define the quality requirements for the medico-legal ascertainment methodology, which are essential for guaranteeing the objectivity, rigor, and reproducibility of the data and the evidence collection procedure. Currently, there are no supra-national medico-legal guidelines dealing with the ascertainment methodology of personal injury and damage under tort and civil law.

Cases on Medical Nutrition Therapy for Gastrointestinal Disorders presents real-world case studies on nutrition assessment, diagnosis, intervention, monitoring, and evaluation standards and practices. Moreover, the cases provide critical updates on the use of medical nutrition therapy for gastrointestinal disorders that include but are not limited to Celiac Disease, Crohn's Disease, Irritable Bowel Syndrome, constipation, and bowel obstructions and discusses strategies for the prevention and management of these disorders. Registered dietitians, dietetic interns, nutritionists, healthcare professionals, researchers, academicians, and students will benefit from the scenarios presented within this book.

Sergio Pistoï, a journalist and a DNA scientist, investigated this brave new world first-hand by interrogating his own genes, and has provided a practical, informative and thought-provoking survival guide to home genetic testing. From medicine to food, from social networking to genealogy and advertising, this book will show you how the DNA revolution is beginning to have such a profound impact on our daily lives and privacy and why it will influence the choices we make. Scenario Based MCQ in Dentistry Mohammad Khursheed Alam,Kiran Kumar Ganji,Bader K. Alzarea,Santosh Patil,Mohammad Sghaireen,2020-03-10 Dentistry has constantly evolved over the years to keep abreast of the latest trends, techniques, and diagnostic procedures. Dental Schools have undergone a number of changes in an effort to arrive upon the ideal format for testing clinical knowledge in examinations. Multiple-choice questions (MCQs) have been the most common modality by which dental students were examined. Although MCQs enable the testing of a broad range of topics, as well as being cost effective, they have largely been abandoned in favour of scenario-based questions (SBQs). Traditional MCQs often abstract and measure only whether people recall facts in their short-term memory. Converting these questions to scenario-based questions can increase the level of difficulty, measure higher level thought and providing relevant context. The authors of Scenario Based MCQ in Dentistry have endeavoured to keep these facts in mind and provide a significant number of high-quality SBQs that comprehensively examine the dental curriculum. Most of the questions are scenario based. Each question not only provides an opportunity to apply clinical knowledge and correctly identify the single best answer to a question, but

also to learn why the other answers are wrong, greatly increasing the clinical acumen and learning opportunity of the reader. Selection tests and competitive exams are hurdles that a candidate seeks to clear with ease. It all depends on meticulous preparation and the quality of resource materials available to the student. Considering the quantity of subject matter that needs to be covered, it becomes a herculean task unless the candidate chooses the right training tool. Reference texts are often too advanced and undergraduate texts are insufficiently updated or lacking in depth and detail. In this context, a lack of good revision aids can be frustrating. This book has been compiled with the selection tests in mind as a tool for rapid revision and analytical learning. It is useful for doctors, dental students, graduates, dental nurses, technicians, as well as specialists seeking professional excellence, or for those studying for the various licensing exams conducted by SCFHS, Saudi Board, HAAD, OMSB, SCHQ, DHCC, DHA, and MOH. This book aims to provide dental students with a useful source for exam preparation, as well as for supplementing the readers' knowledge so that they feel fully prepared for the various postgraduate entrance examinations--
