Cancer Management in Small Animal Practice provides you with all the tools needed to diagnose, stage, and manage the many different disease entities known as "cancer." This manual is designed to provide you with easy-to-access, clinically relevant details for complete care of the small animal cancer patient, while considering the needs, concerns, and capabilities of the client. It provides quick reference sections for information not included in current oncology texts, including drug interactions and resources for participation in clinical trials. All information is well referenced and the reference section on the accompanying website includes links to the original and related articles. The latest information including diagnostic procedures, treatment modalities, and outcome predictions to help clients make the best decisions for their pets. Expert contributors, renowned for clinical, as well as academic and research expertise, offer a wide breadth and depth of expertise. Full-color format provides accurate visual depictions of specific diseases and procedures to enhance your diagnostic capabilities. Key Points highlight critical information, enabling quick, easy access. Systems approach to diagnosis and management offers logical, systematic, head-to-tail procedure for accurate diagnosis, treatment, and prognosis. Extensive discussions of supportive care limit adverse events and increase patient survival and puts emergency information at the practitioner's fingertips. Suggested readings highlight the latest information for further investigation and research. Comprehensive drug safety guidelines thoroughly discuss all information required to safely handle and administer cancer drugs. Helpful drug formularies offer available formulations, recommended dosages, toxicities, and relative costs. Chapter on how to access clinical trials provides helpful information and hope for patients and their caregivers.

A quick guide to appropriately selecting and interpreting laboratory tests, *Small Animal Clinical Diagnosis by Laboratory Methods, 5th Edition* helps you utilize your in-house lab or your specialty reference lab to efficiently make accurate diagnoses without running a plethora of unnecessary and low-yield tests. It provides answers to commonly asked questions relating to laboratory tests, and solutions to frequently encountered problems in small animal diagnosis. For easy reference, information is provided by clinical presentation and abnormalities, and includes hundreds of tables, boxes, key points, and algorithms. This edition, now in full color, is updated with the latest advances in laboratory testing methods and diagnostic problem solving. Written by noted educators Dr. Michael Willard and Dr. Harold Tvedten, this book may be used as an on-the-spot guide to specific problems or conditions as well as a reference for more detailed research on difficult cases. Concise discussions address laboratory approaches to various disorders, possible conclusions from various test results, artifacts and errors in diagnoses, and interpretations leading to various diagnoses. Hundreds of tables, boxes, algorithms, and key points offer at-a-glance information including cautions, common pitfalls, and helpful "pearls," and lead to proper differential and clinical diagnostic decision making. Note boxes identify key considerations in correlating clinical signs with test data for accurate diagnoses, highlight safety precautions, and offer helpful tips for sample preparation and interpretation. Chapters on laboratory diagnostic toxicology and therapeutic drug monitoring help in handling potentially fatal poisonings and other special situations. Expert editors and contributors provide clinical knowledge and successful diagnostic problem-solving solutions. A practical appendix lists referral laboratories that may be contacted for certain diseases, and reference values with the normal or expected range for coagulation, hematology, and more. Updated coverage integrates the newest advances in testing methods and diagnostic problem solving. Full-color photos and schematic drawings are placed adjacent to related text, and accurately

depict diagnostic features on microscopic slide preparations as well as test procedures and techniques.

This title is directed primarily towards health care professionals outside of the United States. The cases discussed in Small Animal Ophthalmology cover selected areas of the subject, in particular common or potentially frustrating cases, as well as the occasional less frequently encountered diseases which should, nonetheless, be recognised by general practitioners. Each section is fully illustrated and useful appendices are included, covering ophthalmic emergencies, conditions which should be checked for in young animals and commonly used pharmacological agents. Unique new case-based approach relating essential theory to clinical practice Modern, highly designed and illustrated so key information can be seen at a glance Self testing, MCQs and remediation means these books are ideally suited for CPD or as an exam revision aid Essential for all general small animal veterinary practitioners and students This is a series of must-have practical handbooks covering specific veterinary problems using a unique, consistent, case-based approach. From simple routine first opinion cases to referrals and more complex clinical scenarios, the series provides the essential knowledge that will lead to improved skills and practice for veterinary practitioners undertaking clinical professional development or students nearing the end of their courses and needing a vital examination revision aid. New case-based approach helps relate essential theory to the real world of the busy clinic Each case outlines: initial presentation, clinical signs, examination techniques, differential diagnoses, treatment options, clinical tips and relevant nursing information

Highly illustrated using full colour throughout so key information can be found at a glance Numerous self-assessment tests and multiple choice questions with remediation Ideally suited for CPD and as an exam revision aid

Equine Behavior: A guide for Veterinarians and Equine Scientists is the quintessential reference for all who really want to know what makes horses tick. Research in horse behavior has made great strides in recent years. This book examines the truth behind modern trends and ancient traditions. Full of insight, it rounds up the latest findings of practitioners and researchers from all over the world, drawing on both cutting-edge research and best practice. With more than 1,000 references, the book explores equine behavior from first principles, by considering the behavior of free-ranging horses and focusing on ways in which management and training influence the responses of their domestic counterparts. Equine physicians, trainers, handlers and owners all need to be students of equine behavior, because the first sign of a problem is often a change in behavior. So, whether you own, ride, lead, groom, feed or heal horses, what you observe is vital to your understanding. Behavioral problems in the stable and under saddle are a grave concern for equine veterinarians worldwide, because they can lead to poor performance, welfare issues, abuse and, ultimately, wastage. Traditionally, veterinarians gave priority to the physical health of their equine patients. This book is a unique attempt to demonstrate the way science can throw light on how and why problems and unwelcome behaviors arise. It also offers ways to bring about change for the better. Beautifully illustrated with more than 500 photographs and line diagrams, Equine Behavior: A guide for veterinarians and equine scientists is an essential resource for practising veterinarians, students and enthusiasts with a specific interest in horses, ponies, and donkeys. Professional trainers and handlers, equine scientists and behavior therapists will also find its contents invaluable. Paul McGreevy is Senior Lecturer in Animal Behavior at the University of Sydney's Faculty of Veterinary Science Features a practical, hands-on approach to all aspects of equine behavior Discusses all factors that effect equine behavior Contrasts normal behavior with abnormal behavior Reviews all behavioral problems Lists and reviews the latest drug therapies Addresses difficult-to-treat clinical problems such as head-shaking, with insights from the leading researcher in this area Provides a brief clinical evaluation of 'horse-whispering' Illustrates the key behavioral differences between horses and donkeys

BSAVA Manuals in various topics, Blackwell, extent varies from 169 to 464 pages, price varies from £47 to £59 for members and £69 to £89 for non-members. - system based approach case based approach as opposed to Blackwell's disease based approach as we strongly feel that this approach is more beneficial for the practitioner - taking the veterinary practitioner as a starting point (the animal comes in the practice with certain symptoms, then what happens next) - our books will be synoptic, easy accessible and with the essential information (bullet points) for user-friendliness and easy access to the content. The majority of the BSAVA Manual have included a lot of information and have moved from bullet pointed text to more elaborate text. - we want the reader to understand why certain steps are taken by means of decision trees: if you do this, then this will happen; if you chose to follow this path, this will be the consequence, etc. It will be quite a challenge to get this right and may not be applicable to every case, but the other potential authors felt very strongly we should include this as this is lacking in the majority of books at the moment - full colour throughout; no plate sections - our books will not aim to cover the whole range, but concentrate on the most common cases that general/ small animal practitioners will see in their practice - coverage of dogs, cats and rabbits - ours will have handy format and flexi cover; BSAVA Manual published in very large format: 297 x 210 mm (American A4 - BSAVA Manuals do not provide the set-by-step guide as we propose - manuals have become top heavy recently and drift towards a more academic and less practical approach Dobson: Small Animal Oncology, 2001, Blackwell, 304 pages, \$94.99 - written in note form and without using the case-based approach: from epidemiology, etiology, pathology and presentation through to staging, management, and prognosis of an chosen

Diagnose and determine treatment for toxic exposures in small animals with this quick reference! Small Animal Toxicology, 3rd Edition covers hundreds of potentially toxic substances, providing the information you need to manage emergency treatment and prevent poisonings in companion animals. To help you identify an unknown poison, this guide provides a list of potential toxins based on clinical signs or symptoms. It also includes a NEW color insert with 85 full-color photographs of toxic plants and of lesions associated with various poisonings. Written by respected veterinarian Michael E. Peterson and board-certified veterinary toxicologist Patricia A. Talcott, along with a team of expert contributors, this edition covers a wide variety of topics including toxicodynamics, toxicokinetics, effective history taking, recognizing clinical signs of toxic exposures, managing emergencies, and supportive care of the poisoned patient. Comprehensive coverage of toxins/poisons includes the full range of substances from acetaminophen to zinc, including home products, prescription medicines, recreational drugs, and more. Guidelines to evaluation, diagnosis and treatment include examinations of the source, toxic dose, toxicokinetics, clinical signs, minimum database, confirming tests, treatment progress and differential diagnosis for each specific toxicant. Coverage of common poisonous substances includes grapes and raisins, nicotine, mercury, mushrooms, Christmas-time plants, and snake and spider venoms. Toxicological Concepts section provides information on toxicologic principles such as history taking, providing supportive care, and managing emergency treatment. General Exposures section addresses nontraditional toxicology such as indoor environmental air, pesticides, pharmaceuticals, and toxicities in pregnant and lactating animals. Miscellaneous Toxicant Groups section covers commonly encountered specific toxicants, the proper use of diagnostic laboratories, use of human poison control centers, and antidotes for specific toxins. More than 50 international contributors provide up-to-date, authoritative advice on treating poisonings and intoxications. 8 NEW chapters cover topics including legal considerations in toxicology cases, responding to mass exposures, and poisonings in birds, small mammals, and geriatric patients. NEW color insert shows 85 of the most commonly encountered toxic substances for at-a-glance identification. UPDATED Signs and Symptoms index makes it easier to find information on a toxic agent by presenting signs rather than requiring the formulation of a diagnosis. UPDATED information on agents most likely to cause a toxic reaction includes natural flea products and an expanded section on human medications. NEW quick-access format with bold headings and convenient tables and boxes allows quick retrieval of information in emergency situations. Now in full color, this concise reference helps you care for common small mammals with coverage of preventive medicine as well as disease management and husbandry. Content not found in other resources includes chapters on ophthalmology, dentistry, and zoonosis. More than 400 images demonstrate key concepts related to radiographic interpretation, relevant anatomy, and diagnostic, surgical, and therapeutic techniques. This is an invaluable reference for veterinarians, technicians, students, research scientists, pet store owners, pet owners, and breeders --Book Jacket.

Bridging the gap between human physical therapy and veterinary medicine, Canine Rehabilitation and Physical Therapy, 2nd Edition provides vets, veterinary students, and human physical therapists with traditional and alternative physical therapy methods to effectively evaluate and treat dogs with various debilitating conditions. Coverage includes treatment protocols for many types of cutaneous, neurologic, and musculoskeletal injuries to facilitate a faster and more complete recovery. Conflict Landscapes explores the long under-acknowledged and under-investigated aspects of where and how modern conflict landscapes interact and conjoin with pre-twentieth-century places, activities, and beliefs, as well as with individuals and groups. Investigating and understanding the often unpredictable power and legacies of landscapes that have seen (and often still viscerally embody) the consequences of mass death and destruction, the book shows, through these landscapes, the power of destruction to preserve, refocus, and often reconfigure the past. Responding to the complexity of modern conflict, the book offers a coherent, integrated, and sensitized hybrid approach, which calls on different disciplines where they overlap in a shared common terrain. Dealing with issues such as memory, identity, emotion, and wellbeing, the chapters tease out the human experience of modern conflict and its relationship to landscape. Conflict Landscapes will appeal to a wide range of disciplines involved in studying conflict, such as archaeology, anthropology, material culture studies, art history, cultural history, cultural geography, military history, and heritage and museum studies.

All the principal basic procedures covered Step-by-step 'action/rationale' approach Full colour format illustrated with 250 colour figures Authors have long experience of teaching and training vets Never struggle to find definitive information on basic procedures again

Laser therapy has become increasingly popular in small animal practice and has many benefits to the patient—including reduced inflammation, faster tissue healing, and less pain—and can be used in a wide variety of conditions including wounds, sprains, and fractures. Aimed at the first opinion vet, this very practical book covers the most important aspects of laser use in the practice environment. It approaches the subject by taking two perspectives—fundamental science and clinical applications—and combining them for a robust, useful guide to the practice of laser therapy. Information covered includes: how lasers work on tissue; how to use them in different scenarios; how to maximise results; how to use them on different conditions including soft tissue, musculoskeletal and neurological; how to integrate lasers with other therapies; when not to use lasers or use with caution; how to choose the equipment and implement it in the practice environment and promote the treatment to clients. The book also includes case studies to illustrate the use of lasers in practice on a range of conditions in different animals including dogs, cats, and exotics. Veterinary Laser Therapy in Small Animal Practice combines the clinical and scientific approaches reflected in the work of the two authors, showing how both sides together can help you have a positive impact on the patient.

Saunders Solutions in Veterinary Practice consists of a series of practical handbooks on selected medical topics on specific

veterinary problems. Case-based, this series is aimed at the small animal veterinary practitioner who has qualified less than 10 years and needs quick access to information and wants to increase his/her confidence on handling that range of cases that cover the spectrum that lies between the simple routine first opinion case and the referral. With a unique focus on the most effective interventional techniques, Withrow & MacEwen's Small Animal Clinical Oncology, 5th Edition tells the full story of cancer in dogs and cats — what it is, how to diagnose it, and how to treat many of the most common cancers encountered in clinical practice. Nearly 500 color photographs, diagrams, x-rays, and gross views depict the clinical manifestations of various cancers. This edition covers the latest advances in clinical oncology, including chemotherapy, surgical oncology, and diagnostic techniques. With contributions from 65 veterinary oncology experts, this authoritative reference is a must-have for current, evidence-based therapeutic strategies on canine and feline oncology. "I really love this book. If you are interested in veterinary oncology, have a flick through this book online or at a conference when you get the chance. I hope that you agree with me that this is the definitive oncology reference source for the early 21st century and that you feel compelled to buy it. Your patients will thank you for it." Reviewed by: Gerry Polton MA VetMB MSc(Clin Onc) DipECVIM-CA(Onc) MRCVS, UK Date: July 2014 Cutting-edge information on the complications of cancer, pain management, and the latest treatment modalities prepares you to diagnose and treat pets with cancer rather than refer cases to a specialist. A consistent format for chapters on body system tumors includes coverage of incidence and risk factors, pathology, natural behavior of tumors, history and clinical signs, diagnostic techniques and workup, treatment options, and prognosis for specific malignancies. A systems approach to the diagnosis and management of cancer facilitates access to information about the many malignancies affecting small animal patients. Nearly 500 color images provide accurate depictions of specific diseases and procedures. Helpful drug formularies provide quick access to information on indications, toxicities, and recommended dosages for chemotherapeutic and analgesic drugs used in cancer treatment. Expert contributors provide in-depth coverage of the most current information in his or her respective specialty in veterinary oncology. Chemotherapy protocols are included when case studies prove clinical efficacy. Discussion of compassion and supportive care for the management of pain, nutritional needs, and grief includes methods for handling the pet's pain and nutritional complications as well as the pet owner's grief when treatment is not successful. Thoroughly UPDATED chapters cover the most recent changes in the clinical management of melanoma, mast cell tumors, tumors of the skeletal system, tumors of the endocrine system, tumors of the mammary gland, urinary cancers, nervous system cancers, lymphoma, and histiocytic diseases. NEW Clinical Trials and Developmental Therapeutics chapter discusses the various phases of clinical trials as well as current challenges and opportunities in oncology drug development. NEW! A focus on the best recommended treatment options highlights therapeutic strategies that have been vetted by veterinary oncology experts. NEW co-author Dr. Rodney L.
