This monograph, originally published by Gingko Press in 1986, sold more than 25,000 copies worldwide and is the definitive work on Asplund. Asplund became the dominant representative of the Scandinavian classicism which marked the twenties, known as 'Swedish Grace'. He then became the leading light of functionalism, but soon moved from stereotyped modernism to a traditionally based architecture. His influence today is felt far afield. Asplund remains at the focal point of architectural debates. This groundbreaking work includes essays by Kenneth Frampton, Stuart Wrede, Elias Cornell, and is published with photos, drawings and plans.

China and the United States have entered a multifaceted cold war: trade, high tech, space, defense, environment and values as they jostle for influence throughout the world. This rivalry between the world's top two economic powers will likely dominate the decades to come and its outcome is uncertain. After the American century, this new century may indeed be China's, or it may not. With Joe Biden's election as president of the United States, we are certainly in for a change of leadership style. But in terms of substance, US policy towards China is likely to remain tough. How will Beijing react? What strengths and weaknesses does China have in this long struggle for supremacy against the United States? This book analyzes the different aspects of this disconcerting rivalry that has had, and will continue to have, an impact on our daily lives. The coronavirus pandemic has further exposed the failings of a monolithic Chinese system that

does not tolerate freedom of expression but it has also, paradoxically, placed China in a position of strength against the United States.

Oligonucleotides represent one of the most significant pharmaceutical breakthroughs in recent years, showing great promise as diagnostic and therapeutic agents for malignant tumors, cardiovascular disease, diabetes, viral infections, and many other degenerative disorders. The Handbook of Analysis of Oligonucleotides and Related Products is an essential reference manual on the practical application of modern and emerging analytical techniques for the analysis of this unique class of compounds. A strong collaboration among thirty leading analytical scientists from around the world, the book provides readers with a comprehensive overview of the most commonly used analytical techniques and their advantages and limitations in assuring the identity, purity, quality, and strength of an oligonucleotide intended for therapeutic use. Topics discussed include: Strategies for enzymatic or chemical degradation of chemically modified oligonucleotides toward mass spectrometric sequencing Purity analysis by chromatographic or electrophoretic methods, including RP-HPLC, AX-HPLC, HILIC, SEC, and CGE Characterization of sequence-related impurities in oligonucleotides by mass spectrometry and chromatography Structure elucidation by spectroscopic methods (IR, NMR, MS) as well as base composition and thermal melt analysis ( $T_m$ ) Approaches for the accurate determination of molar extinction coefficient of oligonucleotides Accurate determination of assay values
