Globalization is a leading force for industry worldwide, especially the new technology sector. The main aim of the book is to enhance the reader's knowledge – especially from a multidisciplinary perspective rather than from an individual functional perspective – of international consumer behaviour. It also explores the role of globalization in the evolving world of the new technology sector and provides an overview of the development of international consumer behavior from historical, geographical and social perspectives, while focusing on new technology products and services. Professionals, students and researchers working in the fields of new technologies and information and communication technologies (ICT) as well as specialists of marketing and management are the target audience for this book. At the same time, the book will be pitched at a level so as to also appeal to a more general readership interested in globalization.

Why are critics upset about advertising? And why are its practitioners so defensive? The idea to publish a Handbook of Economic Psychology came up as a natural consequence of a discussion concerning appropriate reading material for courses in economic psychology. The discussion took place a few years ago in the Department of Economic Psychology at Tilburg University, The Netherlands. It was noted that there was a surprising lack of collections of pertinent readings, to say nothing about the lack of textbooks in the English language. So the present editors, who had been involved in the discussion, decided to start working on a Handbook. The situation has changed quite a lot since then. There are now a number of books, internationally available in the English language, in economic psychology or behavioral economics. The interest in this field of study is expanding quite impressively. The Journal of Economic Psychology is now (1988) in its ninth volume and many other journals are publishing articles in the field. The application of psychological theories and methods to economic problems or the study of economic experiences and behavior is variously referred to as economic psychology or behavioral economics. While in principle we do not want to overdo the differences between the two, we have a feeling that economic psychology has a slightly stronger flavor of psychology than behavioral economics which in its turn seems to be closer to economics. Psychologists tend to feel more at home in economic psychology, while economists seem to favor behavioral economics.

authors discuss the effects of family, social class, culture and subculture on the decision-making process, and, by taking a psychological approach, illuminate the ways in which marketers apply the principle. Over the past two decades, the face of the world consumer has truly changed. Goods are more available, information about these goods is more open and accessible, and the ability to buy these goods from any corner of the earth has become possible. As a result, international marketing is more important now than ever before. In this book, Josh Samli explores the challenges facing modern international marketers. He explains what it is to have successful communication with the target market: using social media to share consistent information about products and services, communicating directly with culture-driven consumers who already communicate online amongst themselves and with competitors, and mastering people-to-people communication with both privileged and non-privileged consumers. Any company dealing with international marketing must learn how to handle these new challenges in order to survive in the 21st century.

Reflecting a decade's worth of changes, *Human Safety and Risk Management, Second Edition* contains new chapters addressing safety culture and models of risk as well as an extensive re-working of the material from the earlier edition. Examining a wide range of approaches to risk, the authors define safety culture and review theoretical models that elucidate mechanisms linking safety culture with safety performance. Filled with practical examples and case studies and drawing on a range of disciplines, the book explores individual differences and the many ways in which human beings are alike within a risk and safety context. It delineates a risk management approach that includes a range of techniques such as risk assessment, safety audit, and safety interventions. The authors address concepts central to workplace safety such as attitudes and their link with behavior. They discuss managing behavior in work environments including key functions and benefits of groups, factors influencing team effectiveness, and barriers to effectiveness such as groupthink.

This book explores key factors associated with consumer behaviour, from both a theoretical and practical perspective. It particularly focuses on the consumer in the 21st century – educated and conscious, but also impatient, disloyal and capricious. The book is divided into three main parts: the first part discusses the theoretical and legal aspects of consumers' behaviour, analysing the government's role in regulating consumer behaviour and the role of the European Union. The second part then examines organisational strategies, such as omni-channel retailing and branding products. And lastly, the third part describes consumer behaviours in the context of individual products and services, from coffee to energy.

Success in the Asian market is crucial to many firms. Yet many marketing strategies are based on a 'western' perspective of what consumers want and respond to. In *Consumer Behaviour in Asia*, the authors argue that Asian culture is so fundamentally different to Western Culture that existing consumer behaviour concepts cannot be applied to Asian consumers. In this book the authors outline and explain these differences and put forward modifications to many well-known consumer behaviour concepts. *Consumer Behaviour in Asia* shows how firms need to modify their marketing strategies in such areas as segmentation, positioning and the marketing mix in order to successfully penetrate these markets.

Consumer behaviour has an increasing impact on business decisions through various individual and environmental factors. This phenomenon can be observed through the different buying patterns of generations and cultures when acquiring products and services. The study of consumer behaviour provides insight into consumer information processing, decision making and consumption patterns and is, therefore, critical to marketing planning and strategies, public policy and ethics. This fascinating subject also helps us understand our own consumer patterns: when, why and where we buy certain items, why we use them in certain ways, and how we dispose of them. Consumer behaviour is an essential component of both marketing and industrial psychology courses.
