Technological Developments in Networking, Education and Automation includes a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the following areas:

Computer Networks: Access Technologies, Medium Access Control, Network architectures and Equipment, Optical Networks and Switching, Telecommunication Technology, and Ultra Wideband Communications.

Engineering Education and Online Learning: including development of courses and systems for engineering, technical and liberal studies programs; online laboratories; intelligent testing using fuzzy logic; taxonomy of e-courses; and evaluation of online courses.

Pedagogy: including benchmarking; group-learning; active learning; teaching of multiple subjects together; ontology; and knowledge management.

Instruction Technology: including internet textbooks; virtual reality labs, instructional design, virtual models, pedagogy-oriented markup languages; graphic design possibilities; open source classroom management software; automatic email response systems; tablet-pcs; personalization using web mining technology; intelligent digital chalkboards; virtual room concepts for cooperative scientific work; and network technologies, management, and architecture.

Coding and Modulation: Modeling and Simulation, OFDM technology , Space-time Coding, Spread Spectrum and CDMA Systems. Wireless

Highlighting a range of pertinent topics such as business communication, psychological health, and work-life balance, this multi-volume book is ideally designed for managers, professionals, researchers, students, and academics interested in social issues in the workplace.

A hands-on guide for anyone who teaches writing to students with learning disabilities This valuable resource helps teachers who want to sharpen their skills in analyzing and teaching writing to students with learning disabilities. The classroom-tested, research-proven strategies offered in this book work with all struggling students who have difficulties with writing-even those who have not been classified as learning disabled. The book offers a review of basic skills-spelling, punctuation, and capitalization-and includes instructional strategies to help children who struggle with these basics. The authors provide numerous approaches for enhancing student performance in written expression. They explore the most common reasons students are reluctant to write and offer helpful suggestions for motivating them. Includes a much-needed guide for teaching and assessing writing skills with children with learning disabilities Contains strategies for working with all students that struggle with writing Offers classroom-tested strategies, helpful information, 100+ writing samples with guidelines for analysis, and handy progress-

This book constitutes the thoroughly refereed proceedings of the 10th International Conference on Evaluation of Novel Approaches to Software Engineering, ENASE 2015, held in Barcelona, Spain, in April 2015. The 10 full papers presented were carefully reviewed and selected from 74 submissions. The papers reflect a growing effort to increase the dissemination of new results among researchers and professionals related to evaluation of novel approaches to software engineering. By comparing novel approaches with established traditional practices and by evaluating them against software quality criteria, the ENASE conferences advance knowledge and research in software engineering, identify most hopeful trends, and propose new directions for consideration by researchers and practitioners involved in large-scale software development and integration.

The capability to design quality software and implement modern information systems is at the core of economic growth in the 21st century. This book aims to review and analyze software engineering technologies, focusing on the evolution of design and implementation platforms as well as on novel computer systems.

goals and objectives. It is a process of recruiting, selecting employees, providing proper orientation, induction, and training, and developing skills. This is a brief introductory book that explains the methodologies applied in the rapidly growing area of Human Resource Management. In addition, it also explains the issues that we come across while managing workforce diversity and the major challenges faced by HRM. This book will be useful for students from management streams who aspire to learn the basics of Human Resource Management. Professionals, especially HR managers, regardless of which sector or industry they belong to, can use this book to learn how to apply the methods of Human Resource Management in their respective project environments. Human resource management (HRM or HR) is the strategic approach to the effective and efficient management of people in a company or organization such that they help their business gain a competitive advantage. ... HR professionals manage the human capital of an organization and focus on implementing policies and processes. Human Resource Management teaches HRM strategies and theories that any manager—not just those in HR needs to know about recruiting, selecting, training, and compensating people. Adaptive hypermedia listening software enables materials writers to combine and deliver a wide range of digital elements on the same digital computer platform more efficiently. Such a combination and delivery provides a multidimensional, multi-sensory digital environment in which rich, efficient, instant, comprehensible, optimum, and meaningful input and

feedback can be presented effectively and efficiently. Moreover, language learners' attention can be drawn to forms and meanings in input. Such aspects correspond with different theories and hypotheses of language learning and teaching. This presents users/learners with an environment that is easy to use, tension-free, and optimal during self-study. However, to be able to design and develop cost effective and professional adaptive hypermedia listening software, there are certain scientific educational findings and implications that need to be implemented at every single stage. To have access to such vital findings is not so easy, and research must address this area. Design Solutions for Adaptive Hypermedia Listening Software explores how to design and create technically and pedagogically sound and efficient interactive adaptive hypermedia listening software for language learners in any language. The chapters will cover learner strategy tools, the effectiveness of this technology, best practices in adaptive hypermedia listening software, and the benefits and challenges of this technology for language learning. It is ideal for companies, institutions, teachers, policymakers, academicians, researchers, advanced-level students, technology developers, and decision-making pertinent government officials interested in designing and developing multimedia listening environments for language learners.

Client-Centered Software Development: The CO-FOSS Approach introduces a method to creating a customized software product for a single client, either from scratch or by reusing open source components. The clients are typically

non-profit humanitarian, educational, or public service organizations. This approach has been used in undergraduate courses where students learn the principles of software development while implementing a real-world software product. This book provides instructors, students, clients, and professional software developers with detailed guidance for developing a new CO-FOSS product from conceptualization to completion. Features Provides instructors, students, clients, and professional software developers with a roadmap for the development of a new CO-FOSS product from conceptualization to completion Motivates students with real-world projects and community service experiences Teaches all elements of the software process, including requirements gathering, design, collaboration, coding, testing, client communication, refactoring, and writing developer and user documentation Uses source code that can be reused and refitted to suit the needs of future projects, since each CO-FOSS product is free and open source software Provides links to a rich variety of resources for instructors and students to freely use in their own courses that develop new CO-FOSS products for other non-profits. " This timely addition to a new genre of evaluation methodology eschews the objectivity of an external evaluation in favor of internal value-driven assessments that advance the goal of self-improvement through self-determination. Fetterman offers down-to-earth, clearly written descriptions and explanations of an approach that reconciles the contingencies of organizational practice with the standards and principles of evaluation accountability. He adroitly bridges the gap between the subjectivity of self-evaluation and the objectivity of external evaluation by showing with case examples and detailed methods, forms, and narrative why empowerment evaluation extends the reach of standard evaluation practice." --Dennis Mithaug,

What is empowerment evaluation? When is it the most appropriate approach to use in an evaluation? How can it best be implemented? Aimed at demystifying empowerment evaluation, the book shows readers when to use this form of evaluation and how to more effectively use its three steps (developing a mission statement; taking stock by identifying and prioritizing the most significant program activities; and, charting a course for future strategies to accomplish program goals). Fetterman also illustrates the steps with four case examples, ranging from hospital to educational settings. In addition, he covers: how to use empowerment evaluation to meet the standards developed by the Joint Committee on Standards for Educational Evaluation; the caveats and concerns about the use of empowerment evaluation; the relationship between collaborative, participatory, stakeholder, and utilization-focused evaluation with empowerment evaluation; the role of the Internet in disseminating empowerment evaluation; and, an analysis of the strengths, weaknesses, and conditions of empowerment evaluation. This book will guide evaluators exploration of their roles

While vols. III/29 A, B (published in 1992 and 1993, respectively) contains the low frequency properties of dielectric crystals, in vol. III/30 the high frequency or optical properties are compiled. While the first subvolume 30 A contains piezooptic and elastooptic constants, linear and quadratic electrooptic constants and their temperature coefficients, and relevant refractive indices, the present subvolume 30 B covers second and third order nonlinear optical susceptibilities. For the reader's convenience an alphabetical formula index and an alphabetical index of chemical, mineralogical and technical names for all substances of volumes 29 A, B and 30 A, B are included.

This is a book for people who are struggling to find their way out of a cave of anxiety, depression, and suicidal thoughts—and for anyone who cares for someone who's been lost in that cave. Suicide is now the leading cause of death among young adults 18-34, and the fourth-leading cause of death among the middle-aged. Just as a computer's hardware determines its foundational capabilities and its software determines how it interfaces with the world, humans' hardware is tied to our biology and our software dictates how we relate to others and ourselves. Together, these parts of our identity determine our functionality, limitations, and possibilities. We become the story we have decided to live inside. When Jesus said, "I have come to set captives free," He meant that He came to "de-bug" our programming. Jesus invites us to partner with Him to bring to the surface and then move past our debilitating bugs. This book is a conversation between a minister and a psychiatrist. Informed by the clinical realities of anxiety, depression, and suicide, the authors draw from the transformational relational strategies of Jesus to chart a path into life and freedom. Self-regulated learning (SRL) subsumes key aspects of the learning process, such as cognitive strategies, metacognition and motivation, in one coherent construct. Central to this construct are the autonomy and responsibility of students to take charge of their own learning. Skills for self-regulation can be encouraged both directly and indirectly through a range of learning activities. In this book we look specifically at the ways in which technology enhanced learning environments (TELEs) have been used to support self-regulation. The book provides an overview of recent studies on SRL in TELEs in

Europe – a perspective which is new and has not been articulated hitherto. It addresses conceptual and methodological questions as well as practices in technology enhanced learning. While the focus is on European studies, we are aware that much of the groundwork in the field of SRL has emanated from the United States. The book is divided into three parts: (A) Foundations of SRL in TELEs, (B) Empirical studies on SRL in TELEs and (C) SRL in TELEs: perspectives on future developments. The book presents a rich resource of information for researchers and educators at all levels who are interested in supporting the acquisition of SRL through TELEs.

This publication presents the latest innovations and achievements of academic communities on Decision Support Systems (DSS). These advances include theory systems, computer-aided methods, algorithms, techniques and applications related to supporting decision making. The aim is to develop approaches for applying information systems technology to increase the effectiveness of decision making in situations where the computer system can support and enhance human judgments in the performance of tasks that have elements which cannot be specified in advance. Also it is intended to improve ways of synthesizing and applying relevant work from resource disciplines to practical implementation of systems that enhance decision support capability. The resource disciplines include: information technology, artificial intelligence, cognitive psychology, decision theory, organizational theory, operations research and modeling. Researchers come from the Operational Research area but also from Decision Theory, Multicriteria Decision Making methodologies, Fuzzy sets and modeling tools. Based on the introduction of Information and Communication Technologies in organizations, the decisional process is evolving from a mono actor to a multi actor

This book explores the domain of software maintenance management and provides road maps for improving software maintenance organizations. It describes full maintenance maturity models organized by levels 1, 2, and 3, which allow for benchmarking and continuous improvement paths. Goals for each key practice area are also provided, and the model presented is fully aligned with the architecture and framework of software development maturity models of CMMI and ISO 15504. It is complete with case studies, figures, tables, and graphs.

Computer programs and processes that take into account the goals and needs of the user meet with the greatest success, so it behooves software engineers to consider the human element inherent in every line of code they write. Human Factors in Software Development and Design brings together high quality research on the influence and impact of ordinary people on the software industry. With the goal of improving the quality and usability of computer technologies, this premier reference is intended for students and practitioners of software engineering as well as researchers, educators, and interested laymen.

Computer science graduates often find software engineering knowledge and skills are more in demand after they join the industry. However, given the lecture-based curriculum present in academia, it is not an easy undertaking to deliver industry-standard knowledge and skills in a software engineering classroom as such lectures hardly engage or convince students. Overcoming Challenges in Software Engineering Education: Delivering Non-Technical Knowledge and Skills combines recent advances and best practices to improve the curriculum of software engineering education. This book is an essential reference source for researchers and educators seeking to bridge the gap between industry

Decades of software testing experience condensed into the most important lessons learned. The world's leading software testing experts lend you their wisdom and years of experience to help you avoid the most common mistakes in testing software. Each lesson is an assertion related to software testing, followed by an explanation or example that shows you the how, when, and why of the testing lesson. More than just tips, tricks, and pitfalls to avoid, Lessons Learned in Software Testing speeds you through the critical testing phase of the software development project without the extensive trial and error it normally takes to do so. The ultimate resource for software testers and developers at every level of expertise, this guidebook features: \* Over 200 lessons gleaned from over 30 years of combined testing experience \* Tips, tricks, and common pitfalls to avoid by simply reading the book rather than finding out the hard way \* Lessons for all key topic areas, including test design, test management, testing strategies, and bug reporting \* Explanations and examples of each testing trouble spot help illustrate each lesson's assertion

the meaning behind the metrics, and choose measurements that are meaningful both in the context of your company's goals and also for the supplier. Supplier Evaluation and Performance Excellence helps you get at the root causes of supplier problems that even suppliers may be unaware of and enable suppliers to make high-impact improvements. Many firms do not know where to begin in the supplier evaluation process, what ways would work best, or even what kind of results they want to get. They know that they should be measuring supplier performance, but may not understand why or what they would gain from it. This book is geared toward managers at two types of companies: those who know that they should be measuring supplier performance but don't know where to start, and companies who want ideas about how to improve or revitalize a current program.
