This year the SOFSEM conference is coming back to Milovy in Moravia to th be held for the 26 time. Although born as a local Czechoslovak event 25 years ago SOFSEM did not miss the opportunity oe red in 1989 by the newly found freedom in our part of Europe and has evolved into a full-?edged international conference. For all the changes, however, it has kept its generalist and mul-disciplinary character. The tracksof invited talks, ranging from Trends in Theory to Software and Information Engineering, attest to this. Apart from the topics mentioned above, SOFSEM'99 oer s invited talks exploring core technologies, talks tracing the path from data to knowledge, and those describing a wide variety of applications. Therich collection of invited talks presents onetraditional facet of SOFSEM: that of a winter school, in which IT researchers and professionals get an opp- tunity to see more of the large pasture of today's computing than just their favourite grazing corner. To facilitate this purpose the prominent researchers delivering invited talks usually start with a broad overview of the state of the art in a wider area and then gradually focus on their particular subject.

Integration is the most significant European historical development in the past fifty years, eclipsing in importance even the collapse of the USSR. Yet, until now, no satisfactory explanation is to be found in any single book as to why integration is significant, how it originated, how it has changed Europe, and where it is headed. Professor Gillingham's work corrects the inadequacies of the existing literature by cutting through the genuine confusion that surrounds the activities of the European Union, and by looking at his subject from a truly historical perspective. The late-twentieth century has been an era of great, though insufficiently appreciated, accomplishment that intellectually and morally is still emerging from the shadow of an earlier one of depression, and modern despotism. This is a work, then, that captures the historical distinctiveness of Europe in a way that transcends current party political debate.
