The emergence of cloud computing, internet of things, mobile technologies, and social networking have created better-connected members of the public who are digitally linked with each other in real time. Establishing this two-way interaction between citizens and governments has thus become attractive and an expected feature of governments worldwide. Previously, federal and local governments relied on first-generation technologies to provide basic levels of automation and digitization. Now, because of their desire to become more open, transparent, accountable, and connected, newer technologies including cloud computing, mobile networking, big data analytics, Web 2.0, and social media must be developed and utilized. Web 2.0 and Cloud Technologies for Implementing Connected Government is an essential reference source that presents various dimensions of connected government and connected e-governance visions as well as the latest emerging technologies. Offering development methodologies, practical examples, best practices, case studies, and the latest research, this book covers new strategies for implementing better-connected

Skype for Business is a voice-messaging product designed to enable Microsoft business customers to engage in an instant messaging environment. Formerly Microsoft Lync, the updated software was designed by Microsoft Inc. to serve as a replacement for Windows Messenger in the business platform. Users can utilize tools such as text messaging as well as audio and HD video tools for instant conferencing and collaboration. The software is designed with more business centered features than the consumer Skype counterpart. It was first geared at Windows and Android devices but has been repeatedly updated and now also boasts a version for Mac powered devices.
