**Revoked** Allison Frankel, 2020 [The report] finds that supervision -- probation and parole -- drives high numbers of people, disproportionately those who are Black and brown, right back to jail or prison, while in large part failing to help them get needed services and resources. In states examined in the report, people are often incarcerated for violating the rules of their supervision or for low-level crimes, and receive disproportionate punishment following proceedings that fail to adequately protect their fair trial rights.--Publisher website.

**Taste** Barb Stuckey, 2013-03-26 Whether it's a grilled cheese sandwich with tomato soup or a salted caramel coated in

dark chocolate, you know when food tastes good. Now here's the amazing story behind why you love some foods and can't tolerate others. Whether it's a salted caramel or pizza topped with tomatoes and cheese, you know when food tastes good. Now, Barb Stuckey, a seasoned food developer to whom food companies turn for help in creating delicious new products, reveals the amazing story behind why you love some foods and not others. Through fascinating stories, you'll learn how our five senses work together to form flavor perception and how the experience of food changes for people who have lost their sense of smell or taste. You'll learn why kids (and some adults) turn up their noses at Brussels sprouts, how salt makes grapefruit sweet, and why you drink your coffee black while your spouse loads it with cream and sugar. Eye-opening experiments allow you to discover your unique taster type and to learn why you react instinctively to certain foods. You'll improve your ability to discern flavors and devise taste combinations in your own kitchen for delectable results. What Harold McGee did for the science of cooking Barb Stuckey does for the science of eating in Taste--a calorie-free way to get more pleasure from every bite.

**Taste and Smell** Thomas Hummel,Antje Welge-Lüssen,2006-01-01 Chemosensory dysfunction is a quite frequently occurring problem which significantly affects the patient's quality of life. It can result from infectious agents, environmental factors, toxins, traumatic brain injuries, as well as neurodegenerative diseases. This publication provides up-to-date articles on the chemical senses including the olfactory, trigeminal and gustatory systems. The vomeronasal system and its potential significance in humans is also discussed. Based on recent functional imaging data, the book provides an overview on how the

'lower senses' function, how they work together, for example to produce flavor, how they can be damaged and repaired, and how the function of human chemical senses can be assessed. The publication focuses on chemosensory dysfunction and pays particular attention to taste and its disorders. Renowned experts in their fields of research have contributed their findings to this topical update on chemosensory disorders and made this volume indispensable reading for otorhinolaryngologists and neurologists.

Stumbling on Happiness Daniel Gilbert, 2009-02-24 A smart and funny book by a prominent Harvard psychologist, which uses groundbreaking research and (often hilarious) anecdotes to show us why we're so lousy at predicting what will make us happy - and what we can do about it. Most of us spend our lives steering ourselves toward the best of all possible futures, only to find that tomorrow rarely turns out as we had expected. Why? As Harvard psychologist Daniel Gilbert explains, when people try to imagine what the future will hold, they make some basic and consistent mistakes. Just as memory plays tricks on us when we try to look backward in time, so does imagination play tricks when we try to look forward. Using cutting-edge research, much of it original, Gilbert shakes, cajoles, persuades, tricks and jokes us into accepting the fact that happiness is not really what or where we thought it was. Among the unexpected questions he poses: Why are conjoined twins no less happy than the general population? When you go out to eat, is it better to order your favourite dish every time, or to try something new? If Ingrid Bergman hadn't gotten on the plane at the end of Casablanca, would she and Bogey have been better off? Smart, witty, accessible and laugh-out-loud funny, Stumbling on Happiness brilliantly describes all that science has to tell us about the uniquely human ability to envision the future, and how likely we are to enjoy it when we get there.

**Head Cases** Michael Paul Mason, 2008-04-01 A case manager shares stories of patients' and families' journeys and "deftly conveys the frustrations and inequities of traumatic brain injury" (Mary Roach, The New York Times Book Review). Head Cases takes us into the dark side of the brain in an astonishing sequence of stories, at once true and strange, about the

effects of brain damage. Michael Paul Mason is one of an elite group of experts who coordinate care in the complicated aftermath of tragic injuries that can last a lifetime. On the road with Mason, we encounter survivors of brain injuries as they struggle to map and make sense of the new worlds they inhabit. Underlying each of these survivors' stories is an exploration of the brain and its mysteries. When injured—by a bad fall, a viral infection, or some other misfortune—the brain must figure out how to heal itself, reorganizing its physiology in order to do the job. Mason gives us a series of vivid glimpses into brain science, the last frontier of medicine, and we come away in awe of the miracles of the brain's workings and astonished at the fragility of the brain and the sense of self, life, and order that resides there. Head Cases “[achieves] through sympathy and curiosity insight like that which pulses through genuine literature” (The New York Sun); it is at once illuminating and deeply affecting. “Vivid, heartbreaking [and] movingly written.” —The Seattle Times “Tells stories of tremendous courage and perseverance as survivors and their families work to re-establish the everyday skills they had before their injury. The strange effects of neurological damage will draw fans of Oliver Sacks, but Mason’s poignant and caring accounts of his clients’ lives are sure to touch the hearts of a wide range of readers.” —Publishers Weekly (starred review)

**Happy Money** Elizabeth Dunn, Michael Norton, 2013-05-14 If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. Happy Money offers a tour of new research on the science of spending. Most people recognize that they need professional advice on how to earn, save, and invest their money. When it comes to spending that money, most people just follow their intuitions. But scientific research shows that those intuitions are often wrong. Happy Money explains why you can get more happiness for your money by following five principles, from choosing experiences over stuff to spending money on others. And the five principles can be used not only by individuals but by companies seeking to create happier employees and provide “happier products” to their customers. Elizabeth Dunn and Michael Norton show how companies from Google to Pepsi to Crate & Barrel have put these ideas into action. Along the way, the authors describe new research that reveals that luxury cars often provide no more pleasure than economy models, that commercials can actually enhance the enjoyment of watching television, and that residents of many cities frequently miss out on inexpensive pleasures in their hometowns. By the end of this book, readers will ask themselves one simple question whenever they reach for their wallets: Am I getting the biggest happiness bang for my buck?

**Uncle Tungsten** Oliver Sacks,2013-12-11 From the distinguished neurologist who is also one of the most remarkable storytellers of our time—a riveting memoir of his youth and his love affair with science, as unexpected and fascinating as his celebrated case histories. “A rare gem.... Fresh, joyous, wistful, generous, and tough-minded.” —The New York Times Book Review Long before Oliver Sacks became the bestselling author of *The Man Who Mistook His Wife for a Hat* and *Awakenings*, he was a small English boy fascinated by metals—also by chemical reactions (the louder and smellier the better), photography, squids and cuttlefish, H.G. Wells, and the periodic table. In this endlessly charming and eloquent memoir, Sacks chronicles his love affair with science and the magnificently odd and sometimes harrowing childhood in which that love affair unfolded. In *Uncle Tungsten* we meet Sacks’ extraordinary family, from his surgeon mother (who introduces the fourteen-year-old Oliver to the art of human dissection) and his father, a family doctor who imbues in his son an early enthusiasm for housecalls, to his “Uncle Tungsten,” whose factory produces tungsten-filament lightbulbs. We follow the young Oliver as he is exiled at the age of six to a grim, sadistic boarding school to escape the London Blitz, and later watch as he sets about passionately reliving the exploits of his chemical heroes—in his own home laboratory. *Uncle Tungsten* is a crystalline view of a brilliant young mind springing to life, a story of growing up which is by turns elegiac, comic, and wistful, full of the electrifying joy of discovery.
