world issues while addressing lawyers' ethical obligations to work for social justice. The reader features differing critical approaches and opens up new avenues of ethical debate. Through a combination of provocative selections, lively writing, concrete examples of cases and social movements, and incisive editorial commentary, *Lawyers' Ethics and the Pursuit of Social Justice* defines the emergence of an exciting new field of critical legal ethics scholarship.

However, research also reveals instances where individual practitioners and managers, or whole organisations, fail to act lawfully, ethically and/or carefully. This book addresses just those instances by providing guidance on how to maintain accountable professionalism in tricky "what if?" situations. Dilemmas are explored using case studies and the mosaic of legal rules and regulatory body requirements for accountable professionalism are also laid out. The book will appeal to students and newly qualified practitioners in teaching, health and

Social Inequality and Social Stratification in US Society uses a historical and conceptual framework to explain social stratification and social inequality. The historical scope gives context to each issue discussed and allows the reader to understand how each topic has evolved over the course of American history. The author uses qualitative data to help explain socioeconomic issues and connect related topics. Each chapter examines major concepts, so readers can see how an individual's success in stratified settings often relies heavily on their access to valued resources—types of capital which involve finances, schooling, social networking, and cultural competence. Analyzing the impact of capital types throughout the text helps map out the prospects for individuals, families, and also classes to maintain or alter their position in social-stratification systems. Widely regarded as a standard in the field, G. Edward White's *Tort Law in America* is a concise and accessible history of the way legal scholars and

judges have conceptualized the subject of torts, the reasons that changes in certain rules and doctrines have occurred, and the people who brought about these changes. Now in an expanded edition, *Tort Law in America* features a new preface that places the book within the current scholarship and two new chapters covering developments in American tort law over the past fifteen years. White approaches his subject from four perspectives: intellectual history, the sociology of knowledge, the phenomenon of professionalization in the late nineteenth and early twentieth centuries in America, and the recurrent concerns of tort law since its emergence as a discrete field. He puts the intellectual history of this unique branch of law into the general picture of philosophy, sociology, and literature in what is not only a major work of legal scholarship but also a tour de force for anyone interested in American intellectual history.

The quantity, diversity and availability of transport data is increasing rapidly, requiring new skills in the management and interrogation of data and databases. Recent years have seen a new wave of

Read Book Social Legal And Professional Issues Of Computing A

'big data', 'Data Science', and 'smart cities' changing the world, with the Harvard Business Review describing Data Science as the "sexiest job of the 21st century". Transportation professionals and researchers need to be able to use data and databases in order to establish quantitative, empirical facts, and to validate and challenge their mathematical models, whose axioms have traditionally often been assumed rather than rigorously tested against data. This book takes a highly practical approach to learning about Data Science tools and their application to investigating transport issues. The focus is principally on practical, professional work with real data and tools, including business and ethical issues. "Transport modeling practice was developed in a data poor world, and many of our current techniques and skills are building on that sparsity. In a new data rich world, the required tools are different and the ethical questions around data and privacy are definitely different. I am not sure whether current professionals have these skills; and I am certainly not convinced that our current transport modeling tools will survive in a data rich environment. This is an exciting time to be a data scientist in the transport field. We are trying to get to grips with the opportunities that big data sources offer; but at the same time such data skills need to be fused with an understanding of transport, and of transport modeling. Those with

Read Book Social Legal And Professional Issues Of Computing A

these combined skills can be instrumental at providing better, faster, cheaper data for transport decision- making; and ultimately contribute to innovative, efficient, data driven modeling techniques of the future. It is not surprising that this course, this book, has been authored by the Institute for Transport Studies. To do this well, you need a blend of academic rigor and practical pragmatism. There are few educational or research establishments better equipped to do that than ITS Leeds". - Tom van Vuren, Divisional Director, Mott MacDonald

"WSP is proud to be a thought leader in the world of transport modelling, planning and economics, and has a wide range of opportunities for people with skills in these areas. The evidence base and forecasts we deliver to effectively implement strategies and schemes are ever more data and technology focused a trend we have helped shape since the 1970's, but with particular disruption and opportunity in recent years. As a result of these trends, and to suitably skill the next generation of transport modellers, we asked the world-leading Institute for Transport Studies, to boost skills in these areas, and they have responded with a new MSc programme which you too can now study via this book." - Leighton Cardwell, Technical Director, WSP.

"From processing and analysing large datasets, to automation of modelling tasks sometimes requiring different software packages to "talk" to each other, to

data visualization, SYSTRA employs a range of techniques and tools to provide our clients with deeper insights and effective solutions. This book does an excellent job in giving you the skills to manage, interrogate and analyse databases, and develop powerful presentations. Another important publication from ITS Leeds." - Fitsum Teklu, Associate Director (Modelling & Appraisal) SYSTRA Ltd "Urban planning has relied for decades on statistical and computational practices that have little to do with mainstream data science. Information is still often used as evidence on the impact of new infrastructure even when it hardly contains any valid evidence. This book is an extremely welcome effort to provide young professionals with the skills needed to analyse how cities and transport networks actually work. The book is also highly relevant to anyone who will later want to build digital solutions to optimise urban travel based on emerging data sources". - Yaron Hollander, author of "Transport Modelling for a Complete Beginner"
