

## Social Return Hogeschool Rotterdam

Global trends such as climate change, digitalisation, enhanced concepts of democracy and the consequences of the 2008 financial crisis are changing the playing field of cities across the world. Urban development objectives are shifting away from being purely concerned with wealth creation and competitiveness, to increasingly combining social and environmental dimensions. In this context, how can cities influence and sustain their competitive position over time? Which new types of urban strategies are emerging, and which organising capacities are proving the most important? This book provides insight into the complex issue of delivering sustainable competitiveness by analysing a number of innovative urban development strategies in context. Questions and topics addressed include: how can new legacies of city events be secured; how can clean technology industries be nurtured through urban regeneration initiatives; and how can the impact of urban safety strategies be enhanced? These and other pivotal questions are explored through close attention to the enabling factors linking ideas with results, such as distributed leadership, collaboration, communication and experimentation. Combining case studies from Europe, Africa, South America and Southeast Asia, the book provides a truly international perspective on the potentials and limitations of a new generation of urban development and competitiveness strategies.

Each entry contains information, lists of cast and crew, a select bibliography and an essay by a specialist in the field. Many include a still shot.

"This volume, the result of four years of work performed by the combined research groups of Utrecht University (Faculty of Humanities) and the HU Utrecht University of Applied Sciences (Faculty of Education), focuses on the central theme of 'Normative Professionalization'. Drawing on a wide variety of scholars including Hannah Arendt, Gert Biesta, Harry Kunneman, Donald Schön and Chris Argyris, and engaging with professionalism, ethics, virtue and morality, this book builds the argument that learning to deal with complexity supports not only education but the personal development of teachers and the improvement of society and democracy as well. This volume presents research on a broad range of topics such as worldview education, co-teaching, moral authorship, traditional-reform perspectives on education, the discourse on citizenship, teacher education, and the question how to link religion and education. The research chapters explain the theoretical lenses and methodological approaches which have been employed to get a grip on complexity. The results have been interpreted in light of the concepts of *horror complexitatis*, *amor complexitatis* and *dolor complexitatis*. Guided by detailed research accounts of worldview descriptions provided by students and teachers, this framework has been enriched with the notion of a *passio complexitatis*. In the concluding chapters, the book advocates for an improved balance between the normative and instrumental professionalization of teachers, in order to create space for the improvement of pedagogical relations and processes and to reintroduce the moral dimensions of education. The claim throughout this book is that allowing for complexity in education – even going so far as to embrace it – is vital for the improvement of education, and a prerequisite for more authentic relationships (on the micro level) and the maintenance of a well-functioning democracy and a balanced society (on the macro level). This book is of interest to researchers and educators who are interested in normative professionalization, to qualitative and practice oriented researchers, to teachers and managers in primary, secondary and professional education, and to the wider public which is concerned with the significance of education for the development of a stable and sustainable society."

In economics, business, and government policy, innovation policy requires the creation of new approaches based on insight in what happens in innovation processes, on the micro level of people, firms and interaction between them. In innovation policy it should also be recognized that innovation entails a whole range of activities beyond R&D, such as entrepreneurship, design, commercialization, organization, collaboration and the diffusion of knowledge and innovations. This edited volume explores the roles of individuals and organizations involved in the creation and application of innovations. Covering topics as diverse as the macro-economic importance of innovation, theories of knowledge and learning, entrepreneurship, education and research, organizational innovation, networks and regional innovation systems, *Micro-Foundations for Innovation Policy* provides critical insights into the development of innovation policy.

Drawing on contributions from the 2018 congress of the European Public Relations Education and Research Association (EUPRERA), this volume explores and analyses challenges around communication, management and big ideas to present findings from current research in corporate communication.

Examines the effect of neoliberalism on the recent ageing and social policy agenda in the UK and the USA.

"The island nation of Cape Verde has given rise to a diaspora that spans the four continents of the Atlantic Ocean. Migration has been essential to the island since the birth of its nation. This volume makes a significant contribution to the study of international migration and transnationalism by exploring the Cape Verdean diaspora through its geographic diversity and with a broad thematic range"--Publisher's description.

All cities face a pressing challenge – how can they provide economic prosperity and social cohesion while achieving environmental sustainability? In response, new collaborations are emerging in the form of urban living labs – sites devised to design, test and learn from social and technical innovation in real time. The aim of this volume is to examine, inform and advance the governance of sustainability transitions through urban living labs. Notably, urban living labs are proliferating rapidly across the globe as a means through which public and private actors are testing innovations in buildings, transport and energy systems. Yet despite the experimentation taking place on the ground, we lack systematic learning and international comparison across urban and national contexts about their impacts and effectiveness. We have limited knowledge on how good practice can be scaled up to achieve the transformative change required. This book brings together leading international researchers within a systematic comparative framework for evaluating the design, practices and processes of urban living labs to enable the comparative analysis of their potential and limits. It provides new insights into the governance of urban sustainability and how to improve the design and implementation of urban living labs in order to realise their potential.

Provides a highly variegated picture of developments, events, phenomena and people in the photography of the Netherlands from about 1840 to the present, related to the sociological, economic, social, technological and cultural context of their time. Where necessary, sidebar texts, which can also be read separately, are devoted to particular people, phenomena or institutions throughout the chapters.

*Ultimate Sacrifice* is a story about an unusual love affair between a mature business woman and a young artist. The reader is taken on a journey as far back as the nineteenth century on a scenic Caribbean island to further afield across the Atlantic to Europe: London and the Netherlands. In this work of fiction the author systematically explores the complexity of a fascinating relationship between the main characters. The differences in their backgrounds, lifestyles and points of view are deliberately brought into focus and scrutiny. The encrypted tale examines the probability of the phenomenon, reincarnation and the unraveling of a web of mystery that links the lives of a generation of individuals through a network of relationships.

Despite its modest size, the republic of Suriname is today the site of many distinctive processes of globalization. This intersectional study teases out the complex relationships among class, gender, and ethnic identity over the course of Suriname's modern history, from the capital city of Paramaribo to the country's resource-rich rainforest.

Upscaling, Training, Commoning features a lively account of the 10-year exploration by STEALTH.unlimited into what it means to engage with the glimpses of a world that has become conceivable in the cracks of the Global Financial Crisis (2008). Ultimately, this book is about devising methods for imagining and enacting other worlds. The perspective for this is situated between spatial practice and emerging commons, between an already plundered future and the politics of possibility, between reflection and future fiction. The book traces the moves STEALTH.unlimited (Ana Dzoki? and Marc Neelen) have taken to reframe practice, to rethink economy and create urban commons. Its six-part sequence moves from critique to commitment, but along the way reveals an unsettling systemic rejection - by current politics and economy - of the urgency to upscale and 'train' for a world beyond the capitalist urban condition. The book leads us thus to a crucial question: how to construct our alternatives on the ruins of the broken system? By including personal accounts from emerging alternative voices from literature, economy and urban politics from across Europe, it expands this quest beyond the field of architecture and art.

This provides information on the lives and work of the most significant and most influential designers of our era. Selected from throughout the world by an international advisory board, they are the individuals who have done the most to shape the visual and tactile form of our everyday world. Designers from the fields of graphics, interiors, fashion, stage, film, houseware, textile and industrial design are included.

`The book makes a valuable addition to the field...providing a very useful resource for those evaluating, engaging in, or embarking on, research' - Monika Buscher, Department of Sociology, Lancaster University This book provides a discussion of qualitative research methods from an ethnomethodological perspective. Detailed yet concise, Paul ten Have's text explores the complex relation between the more traditional methods of qualitative social research and the discipline of ethnomethodology. It draws on examples from both ethnomethodological studies and the wider field of qualitative research to discuss critically an array of methods for qualitative data collection and analysis. Key features of the book include: - A broad coverage - includes discussions of interviewing, the use of documents, ethnography, and methods of data analysis - An understanding of different research traditions and illustrations of how these may be used in practice - Concise chapter summaries and further reading sections to aid student learning With a student-friendly structure, this engaging book will be an invaluable resource for both students and researchers across the social sciences.

"HealthGrid 2009 is the seventh meeting of this open forum for the integration of grid technologies, e-science and e-health methods and their applications in the biomedical and healthcare domains. The principal objective of the HealthGrid conference and of the HealthGrid Association is the exchange and debate of ideas, technologies, solutions and requirements that interest the grid and the life-science communities and are likely to promote the integration of grids into biomedical research and health in the broadest sense." "Subjects in this publication reflect the anticipated, though slow, move towards real applications. The first topic that will be discussed is Accessibility, the challenge of making Grids more accessible to bio-medical users and the fraught issue of usability. The next focal area is Core Technologies and Data Integration. This area will be followed by the topic Applications. The debate on Ethical, Legal, Social and Economic (ELSE) Issues is combined with another prominent topic, the Future of Grids."--BOOK JACKET.

This biography presents the interaction between his socialist ideals, scientific aspirations and work as an economic expert.

Offers cast, credits, plot summary, and a critical bibliography for each film, along with biographical information on directors, actors, writers, and production artists.

The failure of current mechanisms to either predict the collapse of various companies or curb corrupt practises has kept the subject of external reporting to the fore. Is Fair Value Fair? Financial Reporting in an International Perspective contains contributions from many highly-respected individuals involved in external reporting, regulation and standard setting. Their contributions discuss the future of regulation application of standards supervision audit Current trends are discussed, as are ways in which the current regulatory environment could be improved. With the new IFRS regulations coming into force in 2005, financial reporting is set to face radical changes. Is Fair Value Fair? fully prepares readers for these changes and is an invaluable tool for corporate financiers and institutional investors with an interest in the regulatory environment.

The Wiley Blackwell Handbook of Humanism presents an edited collection of essays that explore the nature of Humanism as an approach to life, and a philosophical analysis of the key humanist propositions from naturalism and science to morality and meaning. Represents the first book of its kind to look at Humanism not just in terms of its theoretical underpinnings, but also its consequences and its diverse manifestations Features contributions from international and emerging scholars, plus renowned figures such as Stephen Law, Charles Freeman and Jeaneanne Fowler Presents Humanism as a positive alternative to theism Brings together the world's leading Humanist academics in one reference work

Dit boek helpt professionals in het sociaal domein om cliënten met chronische stress beter te ondersteunen. Ook is het boek geschikt voor managers, (dienst)directeuren en voor studenten Social Work, MWD, SJD en SPH. Stress-sensitief werken in het sociaal domein. Inzichten en praktische handvatten voor hulp- en dienstverleners beschrijft hoe chronische stress denken en gedrag ontregelt. In een theoretische inleiding wordt toegelicht hoe het komt dat mensen die in chronische stress leven vaker afspraken vergeten, niet vanzelfsprekend in actie komen en meer moeite hebben hun emoties en verlangens te reguleren. Er wordt uitgelegd hoe het komt dat chronische stress mensen lijkt te gijzelen in hun problematiek. Aan de hand van praktische casuïstiek wordt uitgewerkt wat deze inzichten betekenen voor de publieke hulp- en dienstverlening op terreinen als de re-integratie, jeugdhulpverlening, thuisbegeleiding, schuldhulpverlening, wijkteams en het maatschappelijk werk. Het boek laat zien wat de inzichten betekenen voor bijvoorbeeld de inrichting van ontmoetingsruimten, schriftelijke communicatie en gespreksvoering. Ook vindt u informatie over de waarde van het geven van beloningen, psycho-educatie over stress en instrumenten die cliënten kunnen helpen om (lange)termijndoelen te stellen en die doelen te bereiken. Naast beschrijvingen over de mogelijkheden om de hulp- en dienstverlening effectiever in te richten, krijgt u praktische tips om direct mee aan de slag te gaan. De redactie van het boek wordt gevormd door Nadja Jungmann, lector Schulden en Incasso aan de Hogeschool Utrecht en trainer bij Social Force, Peter Wesdorp, trainer en adviseur bij WhatWorks en specialist op het terrein van de sociale zekerheid en Tamara Madern, lector Schuldpreventie en Vroegsignalering aan eveneens de Hogeschool Utrecht en zelfstandig adviseur en trainer.

Traces the career of abstract expressionist Willem De Kooning, discussing his personal life with wife Elaine Fried, and his battle with alcoholism and Alzheimer's disease.

Strategy as Force Towards Effective Strategies for Urban Development Projects : the Case of Rotterdam City Ports IOS Press

This open access book states that the societal fault lines of our times are deeply intertwined and that they confront us with challenges affecting the security, fairness and sustainability of our societies. The author, Prof. Dr. Patrick Huntjens, argues that overcoming these existential challenges will require a fundamental shift from our current anthropocentric and economic growth-oriented approach to a more ecocentric and regenerative approach. He advocates for a Natural Social Contract that emphasizes long-term sustainability and the general welfare of both humankind and planet Earth. Achieving this crucial balance calls for an end to unlimited economic growth, overconsumption and over-individualisation for the benefit of ourselves, our planet, and future generations. To this end, sustainability, health, and justice in all social-ecological systems will require systemic innovation and prioritizing a collective effort. The Transformative Social-Ecological Innovation (TSEI) framework presented in this book serves that cause. It helps to diagnose and advance innovation and spur change across sectors, disciplines, and at different levels of governance. Altogether, TSEI identifies intervention points and formulates jointly developed and shared solutions to inform policymakers, administrators, concerned citizens, and professionals dedicated towards a more sustainable, healthy and just society. A wide readership of students, researchers, practitioners and policy makers interested in social innovation, transition studies, development studies, social policy, social justice, climate change, environmental studies, political science and economics will find this cutting-edge book particularly useful. "As a sustainability transition researcher, I am truly excited about this book. Two unique aspects of the book are that it considers bigger transformation issues (such as societies' relationship with nature, purpose and justice) than those studied in transition studies and offers analytical frameworks and methods for taking up the challenge of achieving change on the ground." - Prof. Dr. René Kemp, United Nations University and Maastricht Sustainability Institute

In European urban development practices throughout Europe, there is a recurring need for new perspectives that provide insight into the complexity involved in the realization of projects. This need exists particularly around prestigious projects, where the tension between planning ambitions on the one hand, and the reality of conflicting interests and tight budgets on the other reaches its highest point. In the Netherlands, it is also likely that this tension will not decrease in the coming years. Reason enough for an investigation into strategies for urban development projects. This thesis combines several existing scientific insights around the phenomenon 'strategy'. Here, strategy is recognized as force. The term force emphasizes that a strategy, as opposed to a plan, provides those involved with the capacity to respond to the continuously changing reality of an urban development project. Thus, an effective strategy not only consists of making plans, but also includes three other strategic activities: venturing, learning, and visioning. These insights are then specified on the basis of the remarkable case of Rotterdam CityPorts - a project between city and port in which political and economic forces are especially amplified. This leads the thesis to develop a comprehensible theoretical model that reflects the complexity occurring in the realization of contemporary urban development projects. This strategy-as-force model is useful for both scientists and practitioners

This book is open access under a CC BY 4.0 license. This textbook, endorsed by the European Society for Blood and Marrow Transplantation (EBMT), provides adult and paediatric nurses with a full and informative guide covering all aspects of transplant nursing, from basic principles to advanced concepts. It takes the reader on a journey through the history of transplant nursing, including essential and progressive elements to help nurses improve their knowledge and benefit the patient experience, as well as a comprehensive introduction to research and auditing methods. This new volume specifically intended for nurses, complements the ESH-EBMT reference title, a popular educational resource originally developed in 2003 for physicians to accompany an annual training course also serving as an educational tool in its own right. This title is designed to develop the knowledge of nurses in transplantation. It is the first book of its kind specifically targeted at nurses in this specialist field and acknowledges the valuable contribution that nursing makes in this area. This volume presents information that is essential for the education of nurses new to transplantation, while also offering a valuable resource for more experienced nurses who wish to update their knowledge.

Makers of 20th-Century Modern Architecture is an indispensable reference book for the scholar, student, architect or layman interested in the architects who initiated, developed, or advanced modern architecture. The book is amply illustrated and features the most prominent and influential people in 20th-century modernist architecture including Wright, Eisenman, Mies van der Rohe and Kahn. It describes the milieu in which they practiced their art and directs readers to information on the life and creative activities of these founding architects and their disciples. The profiles of individual architects include critical analysis of their major buildings and projects. Each profile is completed by a comprehensive bibliography.

Background papers 1 to 9 published as technical documents. Available in separate records from WHO/HSS/EHT/DIM/10.1 to WHO/HSS/EHT/DIM/10.9

Events are becoming more complex as their range of functions grows, as meeting places, creative spaces, economic catalysts, social drivers, community builders, image makers, business forums and network nodes. Effective design can produce more successful business models that can help to sustain cultural and sporting activities even in difficult economic times. This process requires creative imagination, and a design methodology or in other words 'imagineering'. This book brings together a wide range of international experts in the fields of events, design and imagineering to examine the event design process. It explores the entire event experience from conception and production to consumption and co-creation. By doing so it offers insight into effective strategies for coping with the shift in value creation away from transactional economic value towards social and relational value which benefit a range of stakeholders from the community to policy makers. Mega-events, small community events, business events and festivals in eight different countries are examined providing an international view of social issues in event design. A wide selection of current research perspectives is employed, integrating

both theoretical and applied contributions. The multidisciplinary nature of the material means that it will appeal to a broad academic audience, such as art and design, cultural studies, tourism, events studies, sociology and hospitality.

This book presents fundamental concepts and general approaches to City Logistics. City Logistics is the process of totally optimising urban logistics activities by considering the social, environmental, economic, financial and energy impacts of urban freight movement. City Logistics initiatives are required to solve urban freight transport problems including high levels of traffic congestion, negative environmental impacts, high energy consumption and a shortage of labour. The focus of this work is on modelling City Logistics. Modelling is of crucial importance, since estimates of the impacts generated by City Logistics measures are required for evaluating them. It highlights the formulation of mathematical models of vehicle routing and scheduling with Intelligent Transport Systems (ITS), optimal terminal locations and impact estimation by City Logistics measures. Heuristics techniques such as genetic algorithms, simulated annealing and tabu search are also given to identify approximate optimal solution of these combinatorial optimisation problems. ITS provides powerful tools for efficiently managing and operating vehicle fleets. Sophisticated logistics systems can now be developed by integrating Global Positioning Systems (GPS) and Geographical Information Systems (GIS) in conjunction with application software. In this context, the book presents a theoretical and practical treatment of modelling City Logistics based on ITS.

This title was first published in 2002: The information revolution has deeply influenced the development of Europe's large cities. They are faced with new opportunities and threats from the information and communication technologies (ICTs) and require strategic policy responses. By examining and comparing five European cities - Eindhoven, Helsinki, Manchester, Marseilles and the Hague - this book sheds light on the impact of ICTs on urban development and considers the consequences for urban management. Case studies show how cities use new technologies to improve the delivery of municipal services, to increase civil participation and local democracy, to help their citizens and businesses make the shift to the information society, and to fight the digital divide . These analyses reveal strategic challenges and potential pitfalls for ICT policy. The book offers a unique international perspective on the impact and potential of information technologies on urban development. The integrative approach - taking economic, social and accessibility issues into account - reveals many new insights.

"The extent to which a gap can be identified between the social and market rental sectors in six countries in north-west Europe (England, Flanders (Belgium), France, Germany, Ireland and the Netherlands) is the central issue in this book." -- Book cover.
