Sociology for nurses 2/e Pearson Education India

Towards a Sociology of Nursing offers fresh insights from recent research into the nursing profession. Nurses represent an important part of the professionally trained female workforce and, being a middle-class profession, changes in nursing reflect changes of many working women worldwide. Scholarship addressing these changes, however, often consists of narratives of nurses talking about themselves, which can be enriched by a sociological background that foregrounds hypotheses. In this book, Ricardo A. Ayala problematises the realities which inform, affect and shape nursing, offering new perspectives on the consequences of those social realities for the nursing profession and society more broadly. He draws on extensive field research with nurses in the workplace, spending time with them, interviewing key actors and reading and analysing documents critically through a distinctive sociological lens.

The text is based on the premise that successful nursing rests to a large extent on the development and maintenance of good relationship with patients. The book introduces the nurse to the relevance of sociology and to the uses she can make of this subject in her daily work. This book addresses the educational and professional needs both of the student nurse entering the profession after graduation and the experienced nurse seeking to broaden her understanding of her patients and the society they live in. Other medical practitioners will also find this book of great value in their profession.

Discussing the relationship between social work and sociology, this book explores how the two have become more and more divided, moving from one single discipline, to two separate, but related, fields. Both sociology and social work focus on social problems, social structure, social integration and how individuals respond to and live within cultural and structural constraints. Today, both disciplines face the possibility of losing some of their most important characteristics to individualising trends, the disappearance of the importance of 'the social' and pressure towards solely evidence-based knowledge. In addition to casting light on areas that have been in the shadows of the mainstream narrative, the contributions to this book will raise new questions, contributing to continuing discussions between and within each discipline. This book was originally published as a special issue of Nordic Social Work Research.

Despite noteworthy exceptions, nursing's literature largely disregards the ways in which social and sociological theory permeates, guides and shapes research, education, and practice. Likewise, social theory's ability to position nursing within wider structures of healthcare and educational provision is similarly and puzzlingly downplayed. The questions nurses ask and the problems they face cannot however, adequately be addressed without engaging with social and

sociological theory and, to progress this engagement, contributors to this book explore how social theories are used by and might apply to nursing and nursing practice. The book draws on a wide range of perspectives – philosophical, theoretical, empirical and political – to offer a robust and wide-ranging critique and analysis. Social Theory and Nursing is essential reading for nursing researchers, academics and educators, as well as scholars and researchers in medical sociology, medicine and allied health.

This title was first published in 2001. Much discussion takes place concerning the nature of the relationship between nurses and older people in hospital and there have been many concerns expressed in United Kingdom policy documents about the quality of care for older people in hospitals. Autonomy is considered to be one of the central ethical principles of health care practice and as such is a significantly relevant concept for nurses. This book presents the results of a study undertaken with nurses who work with older people in hospitals. Issues arising from the study include the effects of institutional constraints on autonomy. A framework for person-centred practice has been developed from this work that emphasizes the values of the individual and their needs, wants and desires. The role of the nurse in facilitating practice that respects an individual's values is outlined, and the importance of nurses in negotiating relationships with older people is also emphasized.
