I am not a born academic. I deliberately joined the ranks of academia at a fairly late stage as a natural progression from my professional career as an executive in what in those days was known as "decision support". My career had begun in the telecom industry before the days of deregulation in what one would call strategic planning and then I moved on to decision support in the field of banking, developing trading room software and risk management systems. As I developed decision support systems for real applications, the more I realized how very dependent these systems are on decision design. I began to question a number of basic business assumptions. I felt increasingly the need to review the way decision support systems were conceived at the time since they not only limited what one could do with computers, but also limited the decision-making capacity of executives. I thus decided to take time out from my professional obligations in order to be able to investigate the 'whys and wherefores' behind decision-making. I experienced yet another disappointment at the beginning of my academic career as I noted the academic research style prevailing in most Business Schools. The academic community was adhering to a type of research methodology based on a single view of the way humans think.

The stories in *Skids* are the stories of street kids; they are harrowing yet moving confessionals about young kids on their own, many of them runaways or addicts, eking out existences in shelters, treatment centers, or dysfunctional families. Told in the vernacular of the street, *Skids* reverberates with a sense of urgency and desperation, but with compassion and optimism as well. The book, based on the author's personal experiences, pays homage to the street kids she knew by honoring their stories and making them matter. This is Cathleen With's first story collection.

Knowledge Services Management looks at the transformation of the traditional workplace into a quasi-internal market environment where work activities in knowledge services are organized around clusters of similar or complementary knowledge stocks to address particular types of customer-clients priorities. The book explores a new internal market structure for these service organizations and the implications this presents for managers and scholars in the 21st century workplace. This monograph focuses on the level of management culture development in organizations attempting to disclose it not only with the help of theoretical insights but also by the approach based on employees and managers. Why was the term "management culture" that is rarely found in literature selected for the analysis? We are quite often faced with problems of terminology. Especially, it often happens in the translation from one language to another. While preparing this monograph, the authors had a number of questions on how to decouple the management culture from organization's culture and from organizational culture, how to separate management culture from managerial culture, etc. However, having analysed a variety of scientific research, it appeared that there is no need to break down the mentioned cultures because they still overlap. Therefore, it is impossible to completely separate the management culture from the formal or informal part of organizational culture. Management culture inevitably exists in every organization, only its level of development may vary.
