EBOOK: Introducing Advanced Macroeconomics: Growth and Business Cycles Peter Sørensen, Hans Whitta-Jacobsen, 2010-03-16 Introducing Advanced Macroeconomics: Growth and Business Cycles, 2nd edition provides students with a thorough understanding of fundamental models in macroeconomics and introduces them to methods of formal macroeconomic analysis. Split into two sections, the first half of the book focuses on macroeconomics for the long run, introducing and developing basic models of growth and structural unemployment. The second half of the book deals with the economy in the short run, focusing on the explanation of business fluctuations. This new edition retains the popular pitch and level established in the 1st edition and continues to bridge the gap between intermediate macroeconomics texts and more advanced textbooks.

Introducing Advanced Macroeconomics Hans Jørgen Whitta-Jacobsen, Peter Birch Sørensen, 2022-07-18 Bridging intermediate and advanced macroeconomics study, the authors use empirical examples to introduce students step-by-step to methods of formal macroeconomic analysis, helping them to develop a thorough understanding of fundamental models in growth theory and business cycle theory.

Advanced Introduction to Feminist Economics Joyce P. Jacobsen, 2020-09-25 Many questions arise of an economic nature that are only partially addressed by standard economic analysis. These lacunae give rise to particular lines of critique in economics, including a wide-ranging and increasingly cogent feminist approach to reenvisioning economics. This book provides a comprehensive description of this intriguing new area of feminist economics. It includes discussion of what constitutes feminist economics and how feminist economics is different from other approaches. The intellectual origins of the

area are explicated, and the current state of the subfield outlined. Specific topics covered include conflict over terminology, pedagogy, and content in the field of economics, measurement of the unmeasured economy, the role of caring labor in the economy, heteronormativity in economics, feminist approaches to economic development, multiple approaches to empiricism, modeling of intrahousehold relationships, consideration of the role of property rights in reifying gender roles, differential effects of international trade and finance by gender, and feminist approaches to public finance and social welfare.

Good Economics for Hard Times Abhijit V. Banerjee, Esther Duflo, 2019-11-12 The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

Law and Macroeconomics Yair Listokin, 2019-03-11 A distinguished Yale economist and legal scholar's argument that law, of all things, has the potential to rescue us from the next economic crisis. After the economic crisis of 2008, private-sector spending took nearly a decade to recover. Yair Listokin thinks we can respond more quickly to the next meltdown by reviving and refashioning a policy approach whose proven success is too rarely acknowledged. Harking back to New Deal regulatory agencies, Listokin proposes that we take seriously law's ability to function as a macroeconomic tool, capable of stimulating demand when needed and relieving demand when it threatens to overheat economies. Listokin makes his case by looking at both positive and cautionary examples, going back to the New Deal and including the Keystone Pipeline, the constitutionally fraught bond-buying program unveiled by the European Central Bank at the nadir of the Eurozone crisis, the ongoing Greek crisis, and the experience of U.S. price controls in the 1970s. History has taught us that law is an unwieldy instrument of macroeconomic policy, but Listokin argues that under certain conditions it offers a vital alternative to the monetary and fiscal policy tools that stretch the legitimacy of technocratic central banks near their breaking point while leaving the rest of us waiting and wallowing.

Sveriges Riksbank and the History of Central Banking Tor Jacobson, Rodney Edvinsson, Daniel

Waldenström, 2018-05-24 Offers a comprehensive analysis of the historical experiences of monetary policymaking of the world's largest central banks. Written in celebration of the 350th anniversary of the central bank of Sweden, Sveriges Riksbank. Includes chapters on other banks around the world written by leading economic scholars.

Recursive Macroeconomic Theory Lars Ljungqvist, Thomas J. Sargent, 2004 A significant new edition of a text that offers both tools and sample applications; extensive revisions and seven new chapters improve and expand upon the original treatment.

Feedback Systems Karl Johan Åström, Richard Murray, 2021-02-02 The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of Feedback Systems is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

Methods for Applied Macroeconomic Research Fabio Canova, 2011-09-19 The last twenty years have witnessed tremendous advances in the mathematical, statistical, and computational tools available to applied macroeconomists. This rapidly evolving field has redefined how researchers test models and validate theories. Yet until now there has been no textbook that unites the latest methods and bridges the divide between theoretical and applied work. Fabio Canova brings together dynamic equilibrium theory, data analysis, and advanced econometric and computational methods to provide the first comprehensive set of techniques for use by academic economists as well as professional macroeconomists in banking and finance, industry, and government. This graduate-level textbook is for readers knowledgeable in modern macroeconomic theory, econometrics, and computational programming using RATS, MATLAB, or Gauss. Inevitably a modern treatment of

such a complex topic requires a quantitative perspective, a solid dynamic theory background, and the development of empirical and numerical methods--which is where Canova's book differs from typical graduate textbooks in macroeconomics and econometrics. Rather than list a series of estimators and their properties, Canova starts from a class of DSGE models, finds an approximate linear representation for the decision rules, and describes methods needed to estimate their parameters, examining their fit to the data. The book is complete with numerous examples and exercises. Today's economic analysts need a strong foundation in both theory and application. *Methods for Applied Macroeconomic Research* offers the essential tools for the next generation of macroeconomists.

Macroeconomics for Professionals Leslie Lipschitz, Susan Schadler, 2019-01-23 Understanding macroeconomic developments and policies in the twenty-first century is daunting: policy-makers face the combined challenges of supporting economic activity and employment, keeping inflation low and risks of financial crises at bay, and navigating the ever-tighter linkages of globalization. Many professionals face demands to evaluate the implications of developments and policies for their business, financial, or public policy decisions. *Macroeconomics for Professionals* provides a concise, rigorous, yet intuitive framework for assessing a country's macroeconomic outlook and policies. Drawing on years of experience at the International Monetary Fund, Leslie Lipschitz and Susan Schadler have created an operating manual for professional applied economists and all those required to evaluate economic analysis.

Macroeconomics Wendy Carlin, David Soskice, 2024-01-29 At the cutting edge of the subject area, the authors bring the macroeconomics that researchers and policymakers use today into focus. By developing a coherent set of tractable models, the book enables students to explore and make sense of the pressing questions facing global economies. Carlin and Soskice connect students with contemporary research and policy in macroeconomics. The authors' 3-equation model - extended to include the financial system and with an integrated treatment of inequality - equips students with a method they can apply to the enduring challenges stirred by the financial crisis and the Great Recession. Key features* Engaged with the latest developments in macroeconomic research, policy, and debate, the authors make the cutting edge accessible to undergraduate readers* The theme of inequality is integrated throughout in modelling and applications, with incomplete contracts in labour and credit markets underpinning the presence of involuntary unemployment and credit constraints* The content distils business cycles into a 3-equation model of the demand side, the supply side, and the policy maker, providing a realistic and transparent model which students can deploy to address the questions that interest them* Open economy modelling for both flexible and fixed exchange rate regimes builds on the same foundations and handles oil and climate shocks, as well as the Eurozone crisis* Features thorough treatment of the financial system and how to integrate the financial and business cycles, including coverage on policy design and implementation for financial stability in the wake of the 2008-9 financial crisis and an exploration of hysteresis in the context of the Great Recession* Comprehensive coverage of monetary

policy including the ample reserves regime and of fiscal policy and debt dynamics* Unified treatment of exogenous and endogenous growth models emphasizing the different mechanisms through which diminishing returns to capital can be offset, while Chapter 17 on the ICT revolution examines the implications of innovation and technological change on the future of work and inequality* Contains a chapter considering contemporary quantitative macroeconomics research - including the Heterogeneous Agent New Keynesian (HANK) model - exposing students to the tools that researchers currently use, as well as the benefits and limitations of these methods* End-of-chapter 'Checklist questions' enable students to assess their comprehension, while 'Problems' prompt students to apply independent critical thought* Also available as an e-book enhanced with access to The Macroeconomic Simulator, Animated Analytical Diagrams, and self-assessment activities enabling students to recap content and investigate how models work at their own pace Digital formats and resources This title is available for students and institutions to purchase in a variety of formats and is supported by online resources. The e-book offers a mobile experience and convenient access along with self-assessment activities, multi-media content, and links that offer extra learning support. For more information visit: www.oxfordtextbooks.co.uk/ebooks/ This title is supported by a range of online resource for students including multiple-choice-questions with instant feedback, interactive Animated Analytical Diagrams, access to The Macroeconomic Simulator, web appendices which develop chapters 1, 4, 7, and 18, In addition, lecturers can access PowerPoint slides to accompany each chapter and answers to the problems and questions set in the book.

Inventing the Future Nick Srnicek, Alex Williams, 2015-11-17 This major new manifesto offers a “clear and compelling vision of a postcapitalist society” and shows how left-wing politics can be rebuilt for the 21st century (Mark Fisher, author of Capitalist Realism) Neoliberalism isn’t working. Austerity is forcing millions into poverty and many more into precarious work, while the left remains trapped in stagnant political practices that offer no respite. Inventing the Future is a bold new manifesto for life after capitalism. Against the confused understanding of our high-tech world by both the right and the left, this book claims that the emancipatory and future-oriented possibilities of our society can be reclaimed. Instead of running from a complex future, Nick Srnicek and Alex Williams demand a postcapitalist economy capable of advancing standards, liberating humanity from work and developing technologies that expand our freedoms. This new edition includes a new chapter where they respond to their various critics.

Animal Spirits George A. Akerlof, Robert J. Shiller, 2010-02-01 From acclaimed economists George Akerlof and Robert Shiller, the case for why government is needed to restore confidence in the economy The global financial crisis has made it painfully clear that powerful psychological forces are imperiling the wealth of nations today. From blind faith in ever-rising housing prices to plummeting confidence in capital markets, animal spirits are driving financial events worldwide. In this book, acclaimed economists George Akerlof and Robert Shiller challenge the economic wisdom that got us into this mess, and

put forward a bold new vision that will transform economics and restore prosperity. Akerlof and Shiller reassert the necessity of an active government role in economic policymaking by recovering the idea of animal spirits, a term John Maynard Keynes used to describe the gloom and despondence that led to the Great Depression and the changing psychology that accompanied recovery. Like Keynes, Akerlof and Shiller know that managing these animal spirits requires the steady hand of government—simply allowing markets to work won't do it. In rebuilding the case for a more robust, behaviorally informed Keynesianism, they detail the most pervasive effects of animal spirits in contemporary economic life—such as confidence, fear, bad faith, corruption, a concern for fairness, and the stories we tell ourselves about our economic fortunes—and show how Reaganomics, Thatcherism, and the rational expectations revolution failed to account for them. *Animal Spirits* offers a road map for reversing the financial misfortunes besetting us today. Read it and learn how leaders can channel animal spirits—the powerful forces of human psychology that are afoot in the world economy today. In a new preface, they describe why our economic troubles may linger for some time—unless we are prepared to take further, decisive action.

Growth and Structural Transformation Kwang Suk Kim, Michael Roemer, 2020-03-17 This study provides a comprehensive overview of Korea's macroeconomic growth and structural change since World War II, and traces some of the roots of development to the colonial period. The authors explore in detail colonial development, changing national income patterns, relative price shifts, sources of aggregate growth, and sources of sectoral structural change, comparing them with other countries.

Analyzing Oppression Ann E. Cudd, 2006 *Analyzing Oppression* presents a new, integrated theory of social oppression, which tackles the fundamental question that no theory of oppression has satisfactorily answered: if there is no natural hierarchy among humans, why are some cases of oppression so persistent? Cudd argues that the explanation lies in the coercive co-opting of the oppressed to join in their own oppression. This answer sets the stage for analysis throughout the book, as it explores the questions of how and why the oppressed join in their oppression. Cudd argues that oppression is an institutionally structured harm perpetrated on social groups by other groups using direct and indirect material, economic, and psychological force. Among the most important and insidious of the indirect forces is an economic force that operates through oppressed persons' own rational choices. This force constitutes the central feature of analysis, and the book argues that this force is especially insidious because it conceals the fact of oppression from the oppressed and from others who would be sympathetic to their plight. The oppressed come to believe that they suffer personal failings and this belief appears to absolve society from responsibility. While on Cudd's view oppression is grounded in material exploitation and physical deprivation, it cannot be long sustained without corresponding psychological forces. Cudd examines the direct and indirect psychological forces that generate and sustain oppression. She discusses strategies that groups have used to resist oppression and argues that all persons have a moral responsibility to resist in some way. In the concluding chapter Cudd

proposes a concept of freedom that would be possible for humans in a world that is actively opposing oppression, arguing that freedom for each individual is only possible when we achieve freedom for all others.

Macroeconomics Wendy Carlin, David Soskice, 2006 This volume provides a unified framework for the analysis of short- and medium-run macroeconomics. It develops a core New Keynesian macro model based on imperfect competition and nominal rigidities and shows how this compares with alternatives.

Mathematical Modeling in Economics, Ecology and the Environment N.V. Hritonenko, Yuri P. Yatsenko, 2013-04-17 The problems of interrelation between human economics and natural environment include scientific, technical, economic, demographic, social, political and other aspects that are studied by scientists of many specialities. One of the important aspects in scientific study of environmental and ecological problems is the development of mathematical and computer tools for rational management of economics and environment. This book introduces a wide range of mathematical models in economics, ecology and environmental sciences to a general mathematical audience with no in-depth experience in this specific area. Areas covered are: controlled economic growth and technological development, world dynamics, environmental impact, resource extraction, air and water pollution propagation, ecological population dynamics and exploitation. A variety of known models are considered, from classical ones (Cobb-Douglas production function, Leontief input-output analysis, Solow models of economic dynamics, Verhulst-Pearl and Lotka-Volterra models of population dynamics, and others) to the models of world dynamics and the models of water contamination propagation used after Chernobyl nuclear catastrophe. Special attention is given to modelling of hierarchical regional economic-ecological interaction and technological change in the context of environmental impact. XIII XIV Construction of Mathematical Models ...

Alternatives to Privatization David A. McDonald, Greg Ruiters, 2012-04-23 There is a vast literature for and against privatizing public services. Those who are against privatization are often confronted with the objection that they present no alternative. This book takes up that challenge by establishing theoretical models for what does (and does not) constitute an alternative to privatization, and what might make them 'successful', backed up by a comprehensive set of empirical data on public services initiatives in over 40 countries. This is the first such global survey of its kind, providing a rigorous and robust platform for evaluating different alternatives and allowing for comparisons across regions and sectors. The book helps to conceptualize and evaluate what has become an important and widespread movement for better public services in the global South. The contributors explore historical, existing and proposed non-commercialized alternatives for primary health, water/sanitation and electricity. The objectives of the research have been to develop conceptual and methodological frameworks for identifying and analyzing alternatives to privatization, and testing these models against actually existing alternatives on the ground in Asia, Africa and Latin America. Information of this type is urgently required for practitioners and analysts, both of whom are seeking reliable knowledge on what kind of public models work, how transferable they are

from one place to another and what their main strengths and weaknesses are.

Principles of Economics in Context Neva Goodwin,Jonathan M. Harris,Julie A. Nelson,Brian Roach,Mariano Torras,2015-03-04 Principles of Economics in Context lays out the principles of micro- and macroeconomics in a manner that is thorough, up to date, and relevant to students, attuned to the economic realities of the world around them. It offers engaging treatment of important current topics such as new thinking in behavioral economics, financial instability and market bubbles, debt and deficits, and policy responses to the problems of unemployment, inequality, and environmental sustainability. This new, affordable edition combines the just-released new editions of Microeconomics in Context and Macroeconomics in Context to provide an integrated full-year text covering all aspects of both micro and macro analysis and application, with many up-to-date examples and extensive supporting web resources for instructors and students. Key features include: An eye-opening statistical portrait of the United States; Clear explanation of basic concepts and analytical tools, with advanced models presented in optional chapter appendices; Presentation of policy issues in historical, institutional, social, political, and ethical context--an approach that fosters critical evaluation of the standard microeconomic models, such as welfare analysis, labor markets, and market competition; Issues of human well-being, both domestic and global, are given central importance, enriching the topics and analytical tools to which students are introduced; The theme of sustainability--financial, social, and ecological--is thoroughly integrated in the book, with chapters on alternatives to standard GDP measurement, the environment, common property, public goods, and growth and sustainability in the twenty-first century; Full complement of instructor and student support materials online, including test banks and grading through Canvas.
