Using activities and interactive projects, instructs readers on learning to fall asleep without restlessness, fear, or behavioral problems.

"Instead of trusting kids with choices . . . many parents insist on micromanaging everything from homework to friendships. For these parents, Stixrud and Johnson have a simple message: Stop." --NPR "This humane, thoughtful book turns the latest brain science into valuable practical advice for parents." --Paul Tough, New York Times bestselling author of *How Children Succeed* A few years ago, Bill Stixrud and Ned Johnson started noticing the same problem from different angles: Even high-performing kids were coming to them acutely stressed and lacking motivation. Many complained they had no control over their lives. Some stumbled in high school or hit college and unraveled. Bill is a clinical neuropsychologist who

helps kids gripped by anxiety or struggling to learn. Ned is a motivational coach who runs an elite tutoring service. Together they discovered that the best antidote to stress is to give kids more of a sense of control over their lives. But this doesn't mean giving up your authority as a parent. In this groundbreaking book they reveal how you can actively help your child to sculpt a brain that is resilient, and ready to take on new challenges. The Self-Driven Child offers a combination of cutting-edge brain science, the latest discoveries in behavioral therapy, and case studies drawn from the thousands of kids and teens Bill and Ned have helped over the years to teach you how to set your child on the real road to success. As parents, we can only drive our kids so far. At some point, they will have to take the wheel and map out their own path. But there is a lot you can do before then to help them tackle the road ahead with resilience and imagination.

Teaches sleep-deprived parents how to define sleep goals that work for their family's schedule and style, helping them create a customized sleep planner for their child to ensure consistency with both parents as well as extended caregivers.

Your infant is crying and you don't know why. Your toddler refuses every kind of food—except one. Your preschooler wages war with you each morning over what to wear. Every day, parents struggle unsuccessfully to understand why their children act the way they do. Now child development expert Priscilla J. Dunstan breaks down those barriers to understanding with this revolutionary and accessible guide that teaches a new way of parenting—custom-designed for each child's personality. The product of eight years of groundbreaking research, this book will help you understand how your child interacts with the world. Dunstan begins from the premise that every child has his or her own dominant sensory “interface” with the world. Some

children are highly sensitive to touch, others to sound or to sight. And some are unusually sensitive to all outside stimuli, especially taste and smell. This sensitivity affects how your child behaves, learns, and communicates from the very first days of life. Uncovering your child's dominant sense—and knowing what your own dominant sense is—is essential for finding common ground and creating bonds of trust and intimacy with your child. Use this book to • take comprehensive “sense tests” to determine your child's dominant sense—and your own • understand how sensory overload plays out from infancy to age five, at home and in school • learn why your child's sensory personality shapes the way he or she instinctively reacts to new experiences and people • appreciate the richness of your child's emotional life, and help your child thrive in the outside world For every parent who has ever looked at a child's behavior and thought What is he trying to tell me?, Child Sense shows you how to find the answer. How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, From Neurons to Neighborhoods presents the evidence about

From a leading pediatric sleep physician comes a revolutionary program that will have everyone in the house sleeping through the night. When Dr. Craig Canapari became a father, he realized that all his years of 36-hour hospital shifts didn't even come close to preparing him for the sleep deprivation that comes with parenthood. The difference is that parents don't get a break—it's hard to know if there's a night of uninterrupted sleep anywhere in the foreseeable

future. Sleepless nights for kids mean sleepless nights for the rest of the family—and a grumpy group around the breakfast table in the morning. In *It's Never Too Late to Sleep Train*, Canapari helps parents harness the power of habit to chart a clear path to high-quality sleep for their children. The result is a streamlined two-step sleep training plan that focuses on cues and consequences, the two elements that shape all habits and that take on special importance when it comes to kids' bedtime routines. Dr. Canapari distills years of clinical research and experience to make sleep training simple and stress-free. Even if you've been told that you've missed the optimal "window" for sleep training, Dr. Canapari is here to prove that it's never too late, whether your child is 6 months or 6 years old. He's on your side in the battle against bedtime, and with his advice, parents and children alike can expect a lifetime of healthy sleep. *The Wonder Weeks* reveals what's going on inside baby's mind. Including a bonus chapter with everything about the relationship between sleep and leaps, as well as unique insight into your baby's sleeping behavior. The book includes: \* Week-by-week guide to baby's behavior\* When to expect the fussy behavior, what this implies (cranky, clingy, crying (the three C's) behavior) and how to deal with these regression periods (leaps)\* A description from your baby's perspective of the world around him and how you can understand the changes he's going through\* Fun games and gentle activities you can do with your child\* Unique insight into your baby's sleeping behaviour The book is based on the scientific- and parental-world-changing discovery of a phenomenon: all normal, healthy babies appear to be more fussy at very nearly the same ages, regression periods, and sleep less in these phases. These age-related fluctuations in need for body contact and attention (regression periods) are related to major and quite dramatic changes in the brains of the children. These changes enable a baby

to enter a whole new perceptual world and, as a consequence, to learn many new skills. This should be a reason for celebration, but as far as the baby is concerned these changes are bewildering. He's taken aback--everything has changed overnight. It is as if he has woken up on a strange planet. He needs you to guide him and understand what he is going through! Get ready to rediscover the world all over again with your baby... Bonus: Sleep, and the lack of sleep... that's something we all have to deal with when we have a baby. The bonus chapter includes everything about the relationship between sleep and leaps, as well as unique insight into your baby's sleeping behavior. Hint: did you know your baby learns (and there's a lot of brain activity) during those little, 'light' sleeps?

The New Childcare Bible—A Must-Have Whether You Have Occasional Sitters or a Full-Time Nanny Finding the right caregiver can be one of the most life-changing decisions a parent makes. Whether it's a kindly neighbor for the weekday latchkey hours, a teenage babysitter one night a week, or a full-time professional nanny, the right caregiver can enrich a child's world and literally grow her brain. Hire the wrong one, and this person could cause developmental delays and stress for the entire family. In her groundbreaking new book, *Secrets of the Nanny Whisperer: A Practical Guide for Finding and Achieving the Gold Standard of Care for Your Child*, nationally recognized parenting expert Tammy Gold draws from her extensive background in child developmental psychology, social work, and family therapy to offer the first childcare bible for parents. Knowing the impact caregivers have on children coupled with the unregulated often unknown world of in-home childcare workers, Gold has devoted her professional career, and now this book, to helping parents navigate through this important--and woefully overlooked--process. She arms parents with invaluable tools, tips,

and insider secrets to finding the perfect caregiver-family match. Gold's Family Needs Assessment helps parents identify the traits and conditions that are "must-haves," added "pluses," or nonnegotiable "deal breakers." Parents can then use this list of qualities to quickly weed out unqualified candidates. She also details what to ask over the phone and in a face-to-face interview, how to structure a trial run (which she deems essential), and what to spell out in a Nanny-Family Work Agreement--another essential tool included in the book. Readers learn her "Nanny Speak 1-2-3" technique to help clarify and resolve issues with the caregiver in a productive, positive way. In addition to saving hours and energy, Parents will also discover as much about parenting as they will about finding a nanny. Secrets of the Nanny Whisperer is chock-full of parenting gems about children's developmental stages, ways to nurture and stimulate the child, and essential strategies for maintaining harmonious and high-functioning parent-child-caregiver relationships. This book is a must read for parents who want to create a happier, healthier and safer childcare experience for their child.

Everything you need to know about getting your baby or toddler to sleep -- from America's foremost baby and childcare experts. Babies don't automatically know how to sleep through the night; they need to be taught. The Sears family has learned from decades of pediatric practice, bolstered by their own parenting experiences, that different babies have different nighttime temperaments -- and, of course, different families have different lifestyles. Instead of espousing the kind of "one method fits all" approach advocated in other baby sleep guides, the Sears family explains how you can create a sleep plan that suits the needs of your entire

Proven bedtime solutions for parents of preschool and elementary school children -- from a Yale doctor While there are plenty of resources available to establish healthy sleeping patterns for babies and toddlers, there's very little guidance for parents who want to help their preschool and elementary school children (ages 3 - 10) sleep well. However, parents can be effective sleep coaches for their children once they know what to do. Become Your Child's Sleep Coach meets that need by giving you a simple plan to coach your children to be wonderful sleepers, as well as methods to deal with bed wetting, sleep walking, night terrors, and other sleep issues. The five-step plan shows you how to: 1: Prepare your child's bedroom for great sleep 2: Use the 5B Bedtime Routine every night 3: Teach your child to self-comfort as you work your way out of the room 4: Limit "callbacks and curtain calls" 5: Manage night and early morning wakings "A tremendous resource that will teach you exactly how to solve your child's sleep problems." -- From the Foreword by Meir Kryger, MD, author of The Mystery of Sleep

are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes,

and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Revved up and irritable, many of these children are diagnosed with ADHD, bipolar illness, autism, or other disorders but don't respond well to treatment. They are then medicated, often with poor results and unwanted side effects. Based on emerging scientific research and extensive clinical experience, integrative child psychiatrist Dr. Victoria Dunckley has pioneered a four-week program to treat the frequent underlying cause, Electronic Screen Syndrome (ESS). Dr. Dunckley has found that everyday use of interactive screen devices — such as computers, video games, smartphones, and tablets — can easily overstimulate a child's nervous system, triggering a variety of stubborn symptoms. In contrast, she's discovered that a strict, extended electronic fast single-handedly improves mood, focus, sleep, and behavior, regardless of the child's diagnosis. It also reduces the need for medication and

While no one in today's connected world can completely shun electronic stimuli, Dr. Dunckley provides hope for parents who feel that their child has been misdiagnosed or inappropriately medicated, by presenting an alternative explanation for their child's difficulties and a concrete plan for treating them.
