The Oxford Handbook of Organizational Climate and Culture presents the breadth of topics from Industrial and Organizational Psychology and Organizational Behavior through the lenses of organizational climate and culture. The Handbook reveals in great detail how in both research and practice climate and culture reciprocally influence each other. The details reveal the many practices that organizations use to acquire, develop, manage, motivate, lead, and treat employees both at home and in the multinational settings that characterize contemporary organizations. Chapter authors are both expert in their fields of research and also represent current climate and culture practice in five national and international companies (3M, McDonald's, the Mayo Clinic, PepsiCo and Tata). In addition, new approaches to the collection and analysis of climate and culture data are presented as well as new thinking about organizational change from an integrated climate and culture paradigm. No other compendium integrates climate and culture thinking like this Handbook does and no other compendium presents both an up-to-date review of the theory and research on the many facets of climate and culture as well as contemporary practice. The Handbook takes a climate and culture vantage point on micro approaches to human issues at work (recruitment and hiring, training and performance management, motivation and fairness) as well as organizational processes (teams, leadership, careers, communication), and it also explicates the fact that these are lodged within firms that function in larger national and international contexts.

Staffing Organizations: Contemporary Practice and Theory, the new third edition of a classic in the field, shows how organizations of all sizes can use effective staffing procedures as a source of sustained competitive advantage. Practically, the book shows how to choose, develop, and administer effective staffing procedures, including conducting job analyses, defining and measuring job performance, identifying predictors of performance that are both valid and

legally defensible, and using this information to make sound hiring decisions. All three authors are active practitioners and recommendations based on their experiences are interwoven throughout the chapters. The authors are also grounded in a scientific, conceptual perspective that informs what they say and do in the staffing area. They review cutting-edge theory and research in diverse areas of importance to the practice of staffing, and identify scientific advances as well as areas that should be informed by additional research. Examples of such cutting-edge issues include: *multilevel staffing models linking individual, group, and organizational levels; *comprehensive consideration of diversity and cross-cultural challenges; *the opportunities and challenges of the use of information technology in staffing; *the legal, professional, and ethical challenges facing staffing practitioners; *modern statistical approaches (e.g., structural equation modeling, item response theory, hierarchical linear modeling); and *integrated models of staffing predictors and frameworks for understanding predictor and criterion spaces. Each chapter contains real-world examples and illustrations, a discussion of best practices, practical recommendations, and directions for future research. In doing so, Staffing Organizations: Contemporary Practice and Theory is a modern version of a genuine classic.
