This book provides a comprehensive overview of how use of micro- and nanotechnology (MNT) has allowed major new advance in vaccine development research, and the challenges that immunologists face in making further progress. MNT allows the creation of particles that exploit the inherent ability of the human immune system to recognize small particles such as viruses and toxins. In combination with minimal protective epitope design, this permits the creation of immunogenic particles that stimulate a response against the targeted pathogen. The finely tuned response of the human immune system to small particles makes it unsurprising that many of the lead adjuvants and vaccine delivery systems currently under investigation are based on nanoparticles. Provides a comprehensive and unparalleled overview of the role of micro- and nanotechnology in vaccine development Allows researchers to quickly familiarize themselves with the broad spectrum of vaccines and how micro- and nanotechnologies are applied to their development Includes a combination of

overview chapters setting out general principles, and focused content dealing with specific vaccines, making it useful to readers from a variety of disciplines. Human Histology is designed to help you learn more easily. Superb color photographs of macroscopic specimens and stained human tissues illustrate gross and microscopic detail. Color diagrams, many in 3D, display complex tissues and help you understand structure and function of cells, tissues and organs. Practical histology sections are highlighted in green to show you what to look for in lab microscopy sessions. Clinical sections are highlighted in blue and illustrate how changes in tissue structure and function underlie human disease processes. Advanced concepts provide you with more in-depth knowledge, recent research, and molecular structure of cells and tissues. Key facts boxes provide you with a continuous method to check retention of key facts, both during the course and prior to exams. Chapter-end review questions test your comprehension of the topic in an exam-style format.

In its diversity of perspectives, *The Unfinished Atomic Bomb: Shadows and Reflections* is testament to the ways in which contemplations of the A-bomb are endlessly shifting, rarely fixed on the same point or perspective. The compilation of this book is significant in this regard, offering Japanese, American, Australian, and European perspectives. In doing so, the essays here represent a complex series of interpretations of the bombing of Hiroshima, and its implications both for history, and for the present day. From Kuznick's extensive biographical account of the Hiroshima bomb pilot, Paul Tibbets, and contentious questions about the moral and strategic efficacy of dropping the A-bomb and how that has resonated through time, to Jacobs' reflections on the different ways in which Hiroshima and its memorialization are experienced today, each chapter considers how this moment in time emerges, persistently, in public and cultural consciousness. The discussions here are often difficult, sometimes controversial, and at times oppositional, reflecting the characteristics of A-bomb scholarship more broadly. The aim is to explore the various ways in which Hiroshima is remembered, but also to consider the ongoing legacy and impact of atomic warfare, the reverberations of which remain powerfully felt.

Organized by body-system, this highly illustrated volume covers the normal histological appearance of tissues in a wide range of animals, both domestic and exotic species, with relevant clinical correlates emphasizing the need to appreciate the normal in order

In this work, morphological findings (normal and modified blood elements) are associated with specific clinical conditions. In addition, selected methods used for the detection, identification, isolation and research of blood cells have been described. The parts are arranged in a logical manner to help the reader with quick orientation. This information is important for students, researchers and medical practitioners. Our text may serve as a study material with the goal of preparing students not only for education in pre-clinical sciences, but also for subsequent branches of clinical medicine, particularly hematology, hematooncology and hematopathology. That is the reason why we connected the original basics in morphology with additional information, which extends and applies the basic facts.
