Managing risk in and across organizations has always been of vital importance, both for individual firms and for the globalized economy more generally. With the global financial crisis, a dramatic lesson was learnt about what happens when risk is underestimated, misinterpreted, or even overlooked. Many possible solutions have been competing for international recognition, yet, there is little empirical evidence to support the purported effectiveness of these regulations and structured control approaches, which leaves the field wide open for further interpretation and conceptual development. This comprehensive book pulls together a team of experts from around the world in a range of key disciplines such as management, economics and accounting, to provide a comprehensive resource detailing everything that needs to be known in this emerging area. With no single text currently available, the book fills a much needed gap in our current understanding of strategic risk management, offering the potential to advance research efforts and enhance our approaches to effective risk management practices. Edited by a globally recognized expert on strategic risk management, this book will be an essential reference for students, researchers, and professionals with an interest in risk management, strategic management and finance.

Part of a three part collection in honour of the teachings of Michael I. Handel, one of the foremost strategists of the late 20th century, this collection explores the paradoxes of intelligence analysis, surprise and deception from both historical and theoretical perspectives.

Information in all its forms is at the heart of the economic intelligence process. It is also a powerful vector of innovation and, more than ever, a balance between economic and societal forces. Strategic Intelligence for the Future 1 analyzes the need for the French economic intelligence to mutate in order to develop the economy, strengthen social cohesion and protect vital interests. This mutation requires a change of attitudes and a new way of thinking, widely open to global change and new technologies. The focus of the French economic intelligence on conventional objectives such as business and the economy does not allow for the integration of its multiple possible fields and thus its global nature. The strategy, foresight and temporal dynamics necessary to the understanding of the world, and the new balance of power and control of complex situations, have thus increased the time needed to put this in place. Both theoretical and practical, this book provides a basis from which to develop "enhanced economic intelligence" leading to the implementation of global security.

Strategic Intelligence is a form of meaning that promises the possibility of strategic advantage, dignity, the achievement of objective, and the fulfillment of potential in hostile environments. In *The Cultural Roots of Strategic Intelligence* Gino LaPaglia demonstrates that the strategic aspect of reason—arising in human experience, encoded as value, and born by culture as a strategic resource—has been encoded as values that have been memorialized in culturally authoritative sources in various Eurasian cultures for thousands of years. These sources have validated a strategic orientation in the world, legitimized the strategist as a heroic identity, and transmitted a coherent world view that enables the practitioner of strategy to overcome asymmetric threat. By excavating the provenance of strategic thought expressed in the cultural identity of the strategist in the most culturally authoritative mythological, literary, philosophical and religious sources, and excavating the underlying strategic values expressed in cultural products, LaPaglia demonstrates that the strategic aspect of human rationality is one of the most basic structural dynamics of human meaning, and that the transmission of this strategic way of being and acting in the world offers hope for life's underdogs.

This textbook introduces students to the critical role of the US intelligence community within the wider national security decision-making and political process. Intelligence in the National Security Enterprise defines what intelligence is and what intelligence agencies do, but the emphasis is on showing how intelligence serves the policymaker. Roger Z. George draws on his thirty-year CIA career and more than a decade of teaching at both the undergraduate and graduate level to reveal the real world of intelligence. Intelligence support is examined from a variety of perspectives to include providing strategic intelligence, warning, daily tactical support to policy actions as well as covert action. The book includes useful features for students and instructors such as excerpts and links to primary-source documents, suggestions for further reading, and a glossary.

The revised edition of *Strategic Intelligence: A Handbook for Practitioners, Managers, and Users* is a primer for analysts involved in conducting strategic intelligence research. Author Don McDowell begins with an overview of what strategic intelligence and analysis is, the functions it performs, and outcomes it delivers. McDowell then outlines a proven methodological approach to planning and implementing a strategic research project useful in any setting whatsoever. Strategic Intelligence explains in detail the steps involved in doing strategic analysis and includes examples, guidelines, and standards to further illustrate the process. Each step in the process corresponds with a chapter in the book,

describing the doctrine and/or theory appropriate, as well as applications of the theory and practical hints on its implementation. Additionally, holistic and creative thinking about the problem issues being tackled is stressed in order to avoid narrow, biased analysis.

This book focuses on the legal regulation, mainly from an international law perspective, of autonomous artificial intelligence systems, of their creations, as well as of the interaction of human and artificial intelligence. It examines critical questions regarding both the ontology of autonomous AI systems and the legal implications: what constitutes an autonomous AI system and what are its unique characteristics? How do they interact with humans? What would be the implications of combined artificial and human intelligence? It also explores potentially the most important questions: what are the implications of these developments for collective security –from both a state-centered and a human perspective, as well as for legal systems? Why is international law better positioned to make such determinations and to create a universal framework for this new type of legal personality? How can the matrix of obligations and rights of this new legal personality be construed and what would be the repercussions for the international community? In order to address these questions, the book discusses cognitive aspects embedded in the framework of law, offering insights based on both *de lege lata* and *de lege ferenda* perspectives.

While several fine texts on intelligence have been published over the past decade, there is no complementary set of volumes that addresses the subject in a comprehensive manner for the general reader. This major set explains how the sixteen major U.S. intelligence agencies operate, how they collect information from around the world, the problems they face in providing further insight into this "raw" information through the techniques of analysis, and the difficulties that accompany the dissemination of intelligence to policymakers in a timely manner.

What is the role of intelligence agencies in strategy and policy? How do policymakers use (or misuse) intelligence estimates? When do intelligence-policy relations work best? How do intelligence-policy failures influence threat assessment, military strategy, and foreign policy? These questions are at the heart of recent national security controversies, including the 9/11 attacks and the war in Iraq. In both cases the relationship between intelligence and policy broke down—with disastrous consequences. In *Fixing the Facts*, Joshua Rovner explores the complex interaction between intelligence and policy and shines a spotlight on the problem of politicization. Major episodes in the history of American foreign policy have been closely tied to the manipulation of intelligence estimates. Rovner describes how the Johnson administration dealt with the intelligence community during the Vietnam War; how President Nixon and President Ford politicized estimates on the Soviet Union; and how pressure from the George W. Bush administration contributed to flawed intelligence on Iraq. He also compares the U.S. case with the British experience between 1998 and 2003, and demonstrates that high-profile government inquiries in both countries were fundamentally wrong about what happened before the war.

Strategic intelligence (SI) has mostly been used in military settings, but its worth goes well beyond that limited role. It has become invaluable for improving any organization's strategic decision making process. Strategic Thinking in Criminal Intelligence is designed to complement the drive for more strategic planning in law enforcement crime prevention and detection. The criminal environment is one of rapid and significant change and to be effective, law enforcement is now required to make long-term predictions, anticipate broadly, and think strategically beyond tactical investigations and operational outcomes. Expanded by three chapters, this edition emphasizes intelligence products, risk and threat assessments, and the unfolding complications of intelligence sharing. Expert authors drawn from intelligence agencies around the world provide a unique insight into the philosophy and practice of leading strategic criminal intelligence specialists. It is a vital resource for intelligence practitioners, crime analysts, law enforcement managers and advanced students of policing.

The Future Prospects for Intellectual Property in the EU: 2012-2022 is the name of a collection of essays edited by Florent Gevers & Emmanuel Cornu. This book is dedicated to the celebration of the centenary of *La Revue L'Ingenieur Conseil-ICIP*. As the publisher explains: "This century has, throughout, been dedicated to the protection of innovation and to those who promote it, namely patent, trade mark, design and any other intellectual property right attorney. ... The European Union, whilst strong thanks to its cultural diversity and democratic stability, is weakened by a lack of natural resources. It is therefore driven by the need to promote the protection of its intellectual capital, combined with an ability to innovate, in order to give clear guidance as to its own growth. In this context, ... we have seized the opportunity, in connection with our Centennial publication, to question the challenges that intellectual property practitioners will be faced with in the medium and long terms. For the last ten years, strategic intelligence has striven, with courage and determination, to formulate how intellectual property should adapt to the challenges it faces. The different actors within Europe will therefore have to prepare themselves to find original solutions to these new challenges, as well as meeting the need for new technologies, and resolving the continuing severe global economic crisis that has persevered since 2008. Some of the contributions to this book cover a global perspective, such as the urgent

essential developments in Europe or the need to put the priorities of European companies into perspective. Others address more technical issues, such as ... the recent review by the Max Planck Institute of the European rules and directives relating to the Community Trade Mark (CTM) and national trade mark systems. Every contribution shows a positive direction : intellectual property law is still young and dynamic. Even if it is at a crossroads, it remains one of the main forces for the continued prosperity of the European Union".

Changes in technology, customer demands, competition, and the social character challenge organizations to innovate and change. How they change depends on their leaders, and their knowledge, and philosophy. To create a better future for organizations and to improve the wellbeing of customers, collaborators and communities, leaders need to be strategic thinkers. This book describes the qualities of strategic intelligence and provides the conceptual tools that equip leaders to improve and transform organizations in the age of knowledge work. These qualities include foresight, visioning, partnering both within and outside the organization, and engaging and motivating collaborators. To develop these qualities, it is necessary to articulate a leadership philosophy and to gain knowledge of systems, variation, personality psychology, and the theory of knowledge. This book uniquely integrates leadership, personality and organization. Michael Maccoby has almost unparalleled experience of working with organizations in a wide variety of contexts. He draws his insights from several disciplines - organization theory, psychoanalysis, anthropology; and from working with distinguished and pioneer thinkers. These include the psychoanalyst Erich Fromm; the systems theorist Russell Ackoff; and management pioneer W. Edwards Deming. A major challenge for leadership today is the transformation of traditional bureaucracies into learning organizations. It can't be done by following formulas or roadmaps. Leaders need the qualities and conceptual tools of strategic intelligence and this book shows them what they must do and provides exercises to develop them.

With Critical Thinking for Strategic Intelligence, Katherine Hibbs Pherson and Randolph H. Pherson have updated their highly regarded, easy-to-use handbook for developing core critical thinking skills and analytic techniques. This indispensable text is framed around 20 key questions that all analysts must ask themselves as they prepare to conduct research, generate hypotheses, evaluate sources of information, draft papers, and ultimately present analysis, including: How do I get started? Where is the information I need? What is my argument? How do I convey my message effectively? The Third Edition includes suggested best practices for dealing with digital disinformation, politicization, and AI. Drawing upon their years of teaching and analytic experience, Pherson and Pherson provide a useful introduction to skills that are essential within the intelligence community. Information in all its forms is at the heart of the economic intelligence process. It is also a powerful vector of innovation and, more than ever, a balance between economic and societal forces. That is why a large part of Strategic Intelligence for the Future 2 analyzes the various aspects of information, from traditional processing and research to the psychological and epigenetic aspects of its development. This leads to a new vision of its integration into organizations. In addition, new technologies offer extensive access to information, including social networks which are critically analyzed here. In a complex world where geopolitics and the new concept of information warfare are becoming increasingly important, it becomes imperative to better apprehend and understand our environment, in order to develop critical thinking that will reinforce the different global aspects of security in economic intelligence.

Intelligence continues to undergo significant changes at a remarkable pace, notably developments related to "Big Data," surveillance, and cyber. Intelligence today involves multiagency, multinational, multidisciplinary, multidomain information sharing and sense-making, conducted by commerce, academic, government, civil society, media, law enforcement, military, and nongovernmental/nonprofit organizations. Increasingly complex systems, including interrelated technical dimensions, are central to modern defense systems. Intelligence Engineering: Operating Beyond the Conventional provides a new framework for generating analysis, exploring how systems to system-of-systems can be harnessed both for and into the future. Intelligence engineering (IE) involves the use of scientific and technical knowledge to artfully create, operate, maintain, and dismantle complex devices, machines, structures, systems, and processes that support and/or disrupt human endeavor occurring in the intelligence context. Spanning both human and technical intelligence realms, IE includes the collection and analysis of information that is of military and/or political value, and that relates to international relations, defense, and national security. Strategic Futures, risk management across to resilience concerns, are similarly engaged.

Future U.S. national security strategy is likely to be profoundly affected by the ongoing, rapid evolution of cyberspace--the global information infrastructure--and in particular by the growing dependence of the U.S. military and other national institutions and infrastructures on potentially vulnerable elements of the U.S. national information infrastructure. To examine these effects, the authors conducted a series of exercises employing a methodology known as the Day After ... in which participants are presented with an information warfare crisis scenario and asked to advise the president on possible responses. Participants included senior national security community members and representatives from security-related telecommunications and information-systems industries. The report synthesizes the exercise results and presents the instructions from the exercise materials in their entirety.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

John A. Gentry and Joseph S. Gordon update our understanding of strategic warning intelligence analysis for the twenty-first century. Strategic warning—the process of long-range analysis to alert senior leaders to trending threats and opportunities that require action—is a critical intelligence function. It also is frequently misunderstood and underappreciated. Gentry and Gordon draw on both their practitioner and academic backgrounds to present a history of the strategic warning function in the US intelligence community. In doing so, they outline the capabilities of analytic methods, explain why strategic warning analysis is so hard, and discuss the special challenges strategic warning encounters from senior decision-makers. They also compare how strategic warning functions in other countries, evaluate why the United States has in recent years emphasized current intelligence instead of strategic warning, and recommend warning-related structural and procedural improvements in the US intelligence community. The authors examine historical case studies, including postmortems of warning failures, to provide examples of the analytic points they make. Strategic Warning Intelligence will interest scholars and practitioners and will be an ideal teaching text for intermediate and advanced students.

Offers a new model of intelligence analysis, the Mosaic Method, which capitalises on both the strengths and the weaknesses of the information revolution. Written by the former CEO of Jane's Information group, it presents analysis of current and past intelligence methods alongside fresh ideas and approaches for the future.

This collection of essays on transnational crime and policing covers a broad range of themes: the relationship between global policing and the transnational-state-system; the impact of advanced technologies on policing practice; the changing morphology of occupational policing subculture; and the transnational practices of police agencies. The essays include case studies and are based on empirical fieldwork that began in the early 1990s and continued for over a decade well into the post 9-11 period. This collection also provides valuable accounts of the 'secret social world' of transnational police, demonstrates that the developmental trajectory of transnational practices was already established prior to the 'age of Homeland Security' and addresses the controversial issue of how transnational policing in all of its complex manifestations might be made politically accountable in the interests of the general global commonwealth.

The application of foresight to address the challenges of uncertainty and rapid change has grown dramatically in the past decade. In that period, the techniques have been greatly refined and the scope has been broadened to encompass future-oriented technology analysis (FTA) and more recently, the concept and practice of strategic intelligence. FTA addresses directly the longer-term future through the active and continuous development of visions, and pathways to realise these visions. It is increasingly seen as a valuable management and policy tool complementing, and extending further into the future, classical strategy, planning, and decision-making approaches. This book charts the development of FTA and provides the first coherent description and analysis of its practical application and impact in the worlds of business, government, education and research in both advanced and developing countries. It draws on papers addressing the
