

Suggestopedia And Language Acquisition Variations On A Theme

Research results over the past decades have consistently demonstrated that a key reason why many second language learners fail--while some learners do better with less effort--lies in various learner attributes such as personality traits, motivation, or language aptitude. In psychology, these attributes have traditionally been called "individual differences." The scope of individual learner differences is broad--ranging from creativity to learner styles and anxiety--yet there is no current, comprehensive, and unified volume that provides an overview of the considerable amount of research conducted on various language learner differences, until now. Each chapter in this new volume focuses on a different individual difference variable. Besides a review of the relevant second language literature, Zoltán Dörnyei presents a concise overview of the psychological research involving each topic. A key concern for the author has been to define the various learner factors as measurable constructs and therefore the discussion includes a summary of the most famous tests and questionnaires in each domain. A wide range of readers will benefit from this book--students in linguistics, applied linguistics, modern languages, and psychology programs; second language teachers participating in in-service training courses; and researchers in second language acquisition and psychology.

Suggestopedia and Language Acquisition Variations on a Theme Taylor & Francis

This volume examines linguistics, language acquisition, and language variation, emphasizing their implications for teacher education and language education. A majority of the essays consider issues in second language acquisition, dealing specifically with learners and instructors, or concentrating on the larger social and societal context in which learning and acquisition occur. Topics highlighted include the current and often controversial debate over bilingual education, language variation, and the past, present, and future role of linguistics in language pedagogy.

This volume offers the most comprehensive, up-to-date description of the wide array of second language programs currently available to undergraduate students in the United States and abroad. It brings together, for the first time, detailed descriptions of programs in foreign language, English as a second language (ESL), dual language (bilingual), American Sign Language, Native American, and heritage languages. Addressing both theory and practice, the volume presents the historical development, current practices, and future directions of each type of program, along with detailed case studies. For second language teachers, academic administrators, and teacher educators, this Handbook provides information that will be useful in making instructional and programmatic planning decisions.

The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication. Seminar paper from the year 2005 in the subject English - Pedagogy, Didactics, Literature Studies, grade: 1,0, University of Paderborn (Institut für Anglistik), course: Alternative Methods of Language Teaching, 4 entries in the bibliography, language: English, abstract: As our world becomes more and more globalized, the importance of learning a foreign language increases. In Germany English is already taught in elementary school to give the pupils a basic knowledge concerning the English language. The whole society is involved into a constant change of working and living habits. Changes occur in industry, school and prerequisites to find a job as well as in family life and personal relationships. This development has got influences on every part of human life and so as well on the sector of education. As a result of this, teachers at school have to adjust their teaching methods to the changing conditions of the environment. As a society needs an atmosphere which favours change, it is necessary to be willing to change oneself. Not to change would result in keeping the faults which have been made in the past. You need to take the risk of change if the public weal should grow. Change should not only be pretended or take only place at the surface but also on the basis of the assumptions concerning learning. During the years several methods have been developed to make learning a new and foreign language more and more interesting, easy and efficient. In the beginning the most frequent methods were those of pattern drills, grammar exercise as well as the method of translation. These techniques are still used in some kind of schools and in some lessons, but the range of methods which is available for the teacher has grown to a large amount. The first new methods have been for example those related to the Total Physical Response method, which should not be described any further in this paper. The approaches which have been developed got more and more creative and are more and more in favor for the individual learning prerequisites of the pupils. Some of these methods are for example the method of the Silent Way, the Psycodramaturgie Linguistique and the suggestopedic approach. The method for language learning, which is the topic of this paper, is a variation of the suggestopedic method which is called Psychopedia. In the following, there a description of the method of Suggestopedia will be presented, which will be the basis for the description of the psychopedic approach. In the end there will be a conclusion which will include some future references for the use of Psychopedia in today's school lessons.

Second Language Learning and Language Teaching provides an introduction to the application of second language acquisition research to language teaching. Assuming no previous background in second language acquisition or language teaching methods, this text starts by introducing readers to the basic issues of second language acquisition research. It then examines how people learn particular aspects of the second language, such as grammar, vocabulary, pronunciation and the writing system, and at the strategies they adopt in their learning and the differences between individuals. Final chapters look at second language learning in a broader context – the goals of language teaching and how teaching methods relate to SLA research. This newly updated fifth edition builds on the comprehensive scope of earlier editions while also addressing more recent developments in the field, particularly multilingual approaches to language teaching.

A proper understanding of intelligibility is at the heart of effective pronunciation teaching, and with it, successful teaching of speaking and listening. Far from being an optional 'add-it-on-if-we-have-time' language feature, pronunciation is essential because of its tremendous impact on speech intelligibility. Pronunciation dramatically affects the ability of language learners to make themselves understood and to understand the speech of others. But not all elements of pronunciation are equally important. Some affect intelligibility a great deal, while others do not. With a strong emphasis on classroom practice and how pronunciation teaching can be more effectively approached in different teaching contexts, this book provides an important resource for pronunciation researchers, with a distinctly practical focus. It shows how intelligibility research informs pronunciation teaching within communicative classrooms, enabling language teachers to incorporate intelligibility findings into their teaching. Professionals interested in oral communication, pronunciation, and speech perception will find the book fascinating.

In an era when students suffer more than in the past from fatigue and tension, and when, because of television and other factors, their concentration is in need of improvement, the subject of Suggestopedia is more timely than ever. Studies consistently show that Suggestopedia and its adaptations alleviate stress and improve focusing and memorization. Methods for unconscious assimilation - and, in particular, Suggestopedia, its variants, its adaptations and its background elements - are the subject of this book.
