Read & Co. presents this new edition of Werner's Nomenclature of Colours. First published in 1814, this small volume comprises a collection of 110 swatches displaying nature's colour palette together with their poetical descriptions. In the 18th Century, German geologist Abraham Gottlob Werner set out to establish a standard reference guide to colour for use in the general sciences. Scottish flower painter Patrick Syme later enhanced and extended Werner's work to include all of the most common colours or tints that appear in nature, with each colour swatch accompanied by examples from the Animal, Vegetable and Mineral Kingdoms. The resulting work was used by many scientists, explorers and anthropologists to further their studies, including Charles Darwin during his time on the HMS Beagle. Werner's Nomenclature of Colours is considered the predecessor of modern systems such as Pantone and has even inspired heritage paint ranges from the likes of Dulux and Farrow & Ball. Read & Co. is republishing this beautiful little volume in a new facsimile edition and has taken great care to reproduce the original text and art for a new generation of artists and scientists.

For more than 20 years, the DoD has collected information regarding behavioral and health readiness of active duty military personnel through the Survey of Health Related Behaviors Among Military Personnel (Survey). In 2005, DoD initiated the "Dept. of Defense Lifestyle Assessment Program," which incorporates the active-duty health behaviors study and expands the scope to include the National Guard and Reserves, as well as other special studies, the first of which will examine unit-level influences on alcohol and tobacco use. The 2005 Survey has two broad aims for active duty military personnel: (1) to continue the survey of substance use; and (b) to assess progress toward selected "Healthy People 2010" objectives. Charts and tables.

Includes the Annual report of the Geological Survey of India, 1867-

Since its origin 23 years ago as a pilot test conducted in four U.S. counties, the U.S. Census Bureau's American Community Survey (ACS) has been the focus of continuous research, development, and refinement. The survey cleared critical milestones 14 years ago when it began full-scale operations, including comprehensive nationwide coverage, and 5 years later when the ACS replaced a long-form sample questionnaire in the 2010 census as a source of detailed demographic and socioeconomic information. Throughout that existence and continuing today, ACS research and testing has worked to improve the survey's conduct in the face of challenges ranging from detailed and procedural to the broad and existential. This publication summarizes the presentations and discussion at the September 26-27, 2018, Workshop on Improving the American Community Survey (ACS), sponsored by the U.S. Census Bureau. Workshop participants explored uses of administrative records and third-party data to improve ACS operations and potential for boosting respondent participation through improved communication.
