This classic 1956 edition of the US Air Force Survival manual will be enjoyable reading for anyone interested in the Cold War, survival and the wilderness, or American cultural history. Viewers who enjoy movies like *Dr. Strangelove*, *Fail Safe*, and *Strategic Air Command* will find this a fascinating look into the mindset of the era's aviators. Survival under adverse conditions ranging up to hot war was a very real concern. Dozens of US aircraft were shot down during the Cold War. From the Foreword by General Nathan Twining: This Manual is designed for use of students in the Air Force survival training courses. It amplifies AFM 64-5, *Survival*, by including training information not covered in the kit edition because of weight and size of limitations. AFM 64-3 can also be used as a source book of survival information. It includes much detailed information which would have been beyond the intended scope of the smaller publication; it tells the reader not only what he must do but also why he must do it. Because of the global responsibilities of the United States Air Force, all Air Force personnel face the possibility of survival in a remote or desolate area of the

world. It is the purpose of this Manual to prepare all personnel participating in flights on military aircraft for an intelligent approach to any possible survival situation. The reader is shown that nature and the elements are neither friendly nor hostile and that the training and attitude he carries with him will determine his success in survival. The Manual opens with a discussion of the problems and techniques of general land survival: psychological problems, immediate action, camping and woodcraft, travel, clothing, signaling, food, and other related subjects. Then the ensuing chapters cover the special requirements for survival in the following areas: Arctic, desert, Tropics, sea, and sea ice.

As the elite of the military elite, U.S. Navy SEALs know that they can be deployed anywhere in the world at a moment's notice. Whether in a temperate, tropical, arctic, or subarctic region, they might find themselves alone in a remote area with little or no personal gear. In *The U.S. Navy SEAL Survival Handbook*, decorated Navy SEAL Team Six member Don Mann provides a definitive survival resource. From basic camp craft and navigation to fear management and strategies for coping with any type of disaster, it is an essential resource for all outdoorspeople. Complete with 150 color photographs, this comprehensive guide includes life-saving information on: - Making weapons and tools - Finding water - Wildlife for food - Making shelters - Signaling - Sea survival - And much more

Instructs on how to adopt a Navy SEAL mentality to approach survival situations, discussing survival skills specific to mountain, jungle, arctic, desert, and ocean environments. Ultimately, this study is about a smaller Vietnam War than that which is commonly recalled. It focuses on expectations concerning the impact of air power on the ground war and on some of its actual effects, but it avoids major treatment of some of the most dramatic air actions of the war, such as the bombing of Hanoi. To many who fought the war and believe it ought to have been conducted on a still larger scale or with fewer restraints, this study may seem almost perverse, emphasizing as it does the utility of air power in conducting the conflict as a ground war and without total exploitation of our most awe-inspiring technology. Although the chapters in this study are intended to form a coherent and unified argument, each also offers discrete messages. The chapters are not meant to be definitive. They do not exhaust available documentary material, and they often rely heavily on published accounts. Nor do they provide a complete chronological picture of the uses of air power, even with respect to the ground war. Nor is coverage of areas in which air power was employed—South Vietnam, Laos, Cambodia, and North Vietnam—evenly distributed nor necessarily proportionate to the effort expended in each place during the war. Lastly, some may find one or another form of air power either slightly or insufficiently treated. Such criticisms are beside the point, for the objectives of this study are to explore

a comparatively neglected theme—the impact of air power on the ground—and to encourage further utilization of lessons drawn from the Vietnam experience.

Survival in Man-Made Hazards The Nuclear Environment Biological Environments Chemical Environments Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical

event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-driven officers as Brenci Uttaro Ferkes Meller and Thigpen the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous

environment covertly to execute any number of unconventional warfare missions.
