Travis Pastrana, the most celebrated freestyle motocross rider in the world, knows no bounds. In 1999 he celebrated his first X Games gold by launching his bike into San Francisco Bay. Three years later, he rode straight into the Grand Canyon. On purpose. In *The Big Jump: The Tao of Travis Pastrana*, he makes his biggest leap yet, revealing for the first time the methods (and madness) that fuel his amazing feats. At 14 Pastrana was the youngest World Freestyle Motocross champion. At 17 he was the youngest racer ever to represent Team USA in the Motocross des Nations. Each of *The Big Jump's* chapters builds toward another breathtaking accomplishment, ending with the "impossible" double backflip during X Games 12 that brought Pastrana not just gold but certified legend status. With a foreword by Mat Hoffman, the godfather of BMX, *The Big Jump* is a fuel-injected ride into the mind and heart of Travis Pastrana. Discusses turn-of-the-century inventors and the impact of inventions including electricity in the home, the telephone, automobiles, and airplanes.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

The right of governments to employ capital controls has always been the official orthodoxy of the International Monetary Fund, and the organization's formal rules providing this right have not changed significantly since the IMF was founded in 1945. But informally, among the staff inside the IMF, these controls became heresy in the 1980s and 1990s, prompting critics to accuse the IMF of

indiscriminately encouraging the liberalization of controls and precipitating a wave of financial crises in emerging markets in the late 1990s. In *Capital Ideas*, Jeffrey Chwieroth explores the inner workings of the IMF to understand how its staff's thinking about capital controls changed so radically. In doing so, he also provides an important case study of how international organizations work and evolve. Drawing on original survey and archival research, extensive interviews, and scholarship from economics, politics, and sociology, Chwieroth traces the evolution of the IMF's approach to capital controls from the 1940s through spring 2009 and the first stages of the subprime credit crisis. He shows that IMF staff vigorously debated the legitimacy of capital controls and that these internal debates eventually changed the organization's behavior--despite the lack of major rule changes. He also shows that the IMF exercised a significant amount of autonomy despite the influence of member states. Normative and behavioral changes in international organizations, Chwieroth concludes, are driven not just by new rules but also by the evolving makeup, beliefs, debates, and strategic agency of their staffs.
