A complete revision of *Psychology of the Unconscious* (orig. 1911-12), Jung's first important statement of his independent position.

Originally planned as a brief final volume in the *Collected Works*, *The Symbolic Life* has become the most ample volume in the edition, and one of unusual interest. It contains some 160 items spanning sixty years; they include forewords, replies to questionnaires, encyclopedia articles, occasional addresses, and letters on technical subjects. Collection of this material relied on three chief circumstances. After Jung returned from active medical practice, he gave more of his time to writing, and some sixty papers as well as books were written after 1950. Second, recent research has brought to light a number of reviews, reports and articles from the early years of Jung's career. Finally, Jung's files yielded several finished or virtually finished papers that survived in manuscript. Volume 18 includes three longer works: 'The Tavistock Lectures' (1936); 'Symbols and the Interpretation of Dreams' (1961); and 'The Symbolic Life', the transcript of a seminar given in London in 1939.

Explores Jung's psychological concepts regarding the nature, function and importance of man's symbols as they appear on both the conscious and subconscious level

Jung's legendary American lectures on dream interpretation
In 1936 and 1937, C. G. Jung delivered two legendary seminars on dream interpretation, the first on Bailey Island, Maine, the second in New York City. *Dream Symbols of the Individuation Process* makes these lectures widely available for the first time, offering a compelling look at Jung as he presents his ideas candidly and in English before a rapt

American audience. The dreams presented here are those of Nobel Prize-winning physicist Wolfgang Pauli, who turned to Jung for therapeutic help because of troubling personal events, emotional turmoil, and depression. Linking Pauli's dreams to the healing wisdom found in many ages and cultures, Jung shows how the mandala—a universal archetype of wholeness—spontaneously emerges in the psyche of a modern man, and how this imagery reflects the healing process. He touches on a broad range of themes, including psychological types, mental illness, the individuation process, the principles of psychotherapeutic treatment, and the importance of the anima, shadow, and persona in masculine psychology. He also reflects on modern physics, the nature of reality, and the political currents of his time. Jung draws on examples from the Mithraic mysteries, Buddhism, Hinduism, Chinese philosophy, Kundalini yoga, and ancient Egyptian concepts of body and soul. He also discusses the symbolism of the Catholic Mass, the Trinity, and Gnostic ideas in the noncanonical Gospels. With an incisive introduction and annotations, *Dream Symbols of the Individuation Process* provides a rare window into Jung's interpretation of dreams and the development of his psychology of religion.

Sixteen studies in religious phenomena, including *Psychology and Religion* and *Answer to Job*. ?

After joining the staff of the Burgholzli Mental Hospital in 1900, Jung developed and applied the word-association tests for studying normal and abnormal psychology. The studies have remained a significant phase in the development of Jung's conceptions and an important contribution to diagnostic psychology and psychiatry. Between 1904 and 1907 he published nine studies on the tests. These studies, together with two lectures on the association method given in 1909 at Clark University and three articles on psychophysical researches from American and English journals in 1907-1908,

an appendix.

This volume has become known as perhaps the best introduction to Jung's work. In these famous essays.

"The Relations between the Ego and the Unconscious" and "On the Psychology of the Unconscious," he presented the essential core of his system. Historically, they mark the end of Jung's intimate association with Freud and sum up his attempt to integrate the psychological schools of Freud and Adler into a comprehensive framework. This is the first paperback publication of this key work in its revised and augmented second edition of 1966. The earliest versions of the Two Essays, "New Paths in Psychology" (1912) and "The Structure of the Unconscious" (1916), discovered among Jung's posthumous papers, are published in an appendix, to show the development of Jung's thought in later versions. As an aid to study, the index has been comprehensively expanded.

In 1911 Jung published a book of which he says: '...it laid down a programme to be followed for the next few decades of my life.' It was vastly erudite and covered innumerable fields of study: psychiatry, psychoanalysis, ethnology and comparative religion amongst others. In due course it became a standard work and was translated into French, Dutch and Italian as well as English, in which language it was given the well-known but somewhat misleading title of *The Psychology of the Unconscious*. In the Foreword to the present revised edition which first appeared in 1956, Jung says: '...it was the explosion of all those psychic contents which could find no

room, no breathing space, in the constricting atmosphere of Freudian psychology... It was an attempt, only partially successful, to create a wider setting for medical psychology and to bring the whole of the psychic phenomena within its purview.' For this edition, appearing ten years after the first, bibliographical citations and entries have been revised in the light of subsequent publications in the Collected Works and in the standard edition of Freud's works, some translations have been substituted in quotations, and other essential corrections have been made, but there have been no changes of substance in the text.

Jung forms one of the basic texts of twentieth-century thought: at once foundational for depth psychology and pivotal for intellectual, cultural, and religious history. The writings presented here, spanning five decades, embody Jung's attempt to establish an interdisciplinary science of analytical psychology, and apply its insights to the fields of psychiatry, criminology, psychotherapy, psychoanalysis, personality psychology, anthropology, physics, biology, education, the arts and literature, the history of the mind and its symbols, comparative religion, alchemy, and contemporary culture and politics, among others: each in turn has been decisively marked by his thought. Of timely and ongoing relevance to the understanding of these fields, Jung's writings
