A flourishing life is possible—no perfection required! Women often feel like they have to have it all together in order to live a meaningful life. Instead they feel inadequate, overwhelmed, and exhausted as they try to figure out how to do it all. Author, business owner, and mom to three Lara Casey offers sound and grace-filled advice: “We can’t do it all, and do it well. But, we can choose to cultivate what matters.” Welcome to the journey of getting messy in the rich soil of possibility—embracing imperfect, grace-filled progress to grow a life of joy. Written as part encouragement anthem and part practical guide, Cultivate offers wisdom from God’s Word alongside lessons Lara has learned in her garden. Woven throughout is her personal story that helps release readers from the pressure to achieve and gives them freedom to move from planning to planting a meaningful legacy. “It’s in the imperfect—the mess of the dirt—that good things grow,” Casey reminds readers. “Peonies grow through the dirt, and so do we.” Readers will learn to embrace the season they’re in, finding balance as they interact in fresh ways with their current life scenarios, with God, and in the communities where they are planted. Special features include Actionable Cultivate It prompts throughout the book A ten-week Cultivate Together discussion guide with questions for small groups “Grace from the Garden” vignettes provide encouragement and inspiration Find the joy and the freedom that comes in cultivating what matters, little by little, with God’s transforming grace.

. . . not merely interesting and novel, but also exceedingly provocative and heuristically fertile. --The Review of Metaphysics . . . essential reading for anyone interesting in . . . the new reader-centered forms of criticism. --Library Journal In this erudite and imaginative book, Umberto Eco sets forth a dialectic between 'open' and 'closed' texts. Using a wealth of anecdotes, data from academic literature, and original research, this very accessible little book highlights how we all struggle to cope with the maelstrom of choices, influences and experiences that come our way. The authors have slogged through piles of dry research papers to provide many wonderful nuggets of information and surprising insights. For example: Why is an upside-down red triangle such a powerful warning sign on the road? What is the best kind of alibi? What makes the number 7 so special? Why is it better to whisper words of love into the left ear? Will that recent marriage last? Why is it that the French eat snails but not slugs? The reader will discover the amazing tools and shortcuts that millennia of evolution have built into our brains. And this knowledge is power! Knowing more about how the human mind connects the dots helps us understand why decision-making is so tricky. With insights from evolutionary psychology, we become better equipped to understand ourselves and others and to interact and communicate more effectively.

During the past years there has been rapid progress in the understanding of how early life stress impacts psychopathology in children. The first two parts of this book present the basic principles of brain development and describe the most important neuronal systems. This includes systems involved in emotion processing, cognitive control, and social processes. These first two general sections are followed by an overview about recent research on various neuronal and psychiatric disorders, where environmental exposures and altered brain development play an important role: sleep, autism, ADHD and other developmental forms of psychopathology.

Amyotrophic Lateral Sclerosis (ALS or motor neurone disease) is a progressive neurodegenerative disease that can cause profound suffering for both the patient and their family. Whilst new treatments for ALS are being developed, these are not curative and offer only the potential to slow its progression. Palliative care must therefore be integral to the clinical approach to the disease. Palliative Care in Amyotrophic Lateral Sclerosis: From diagnosis to bereavement reflects the wide scope of this care; it must cover not just the terminal phase, but support the patient and their family from the onset of the disease. Both the multidisciplinary palliative care team and the neurology team are essential in providing a high standard of care and allowing quality of life (both patient and carer) to be maintained. Clear guidelines are provided to address care throughout the disease process. Control of symptoms is covered alongside the psychosocial care of patients and their families. Case studies are used to emphasise the complexity of the care needs and involvement of the patient and family,

culminating in discussion of bereavement. Different models of care are explored, and this new edition utilizes the increase in both the evidence-base and available literature on the subject. New topics discussed include complementary therapies, personal and family experiences of ALS, new genetics research, and updated guidelines for patient care, to ensure this new edition remains the essential guide to palliative care in ALS.

One of Hollywood's first scandals was nearly its last. 1936 looked like it would be a great year for the movie industry. With the economy picking up after the Great Depression, Americans everywhere were sitting in the dark watching the stars—and few stars shined as brightly as one of America's most enduring screen favorites, Mary Astor. But Astor's story wasn't a happy one. She was born poor, and at the first sign that she could earn money, her parents grabbed the reins and the checks. Widowed at twenty-four, Mary Astor was looking for stability when she met and wed Dr. Franklyn Thorpe. But the marriage was rocky from the start; both were unfaithful, but they did not divorce until after Mary Astor gave birth to little Marylyn Thorpe. What followed was a custody battle that pushed The Spanish Civil War and Hitler's 1936 Olympic Games off of the front pages all over America. Astor and Thorpe were both ruthless in their fight to gain custody of their daughter, but Thorpe held a trump card: the diaries that Mary Astor had been keeping for years. In these diaries, Astor detailed her own affairs as well as the myriad dalliances of some of Hollywood's biggest names. The studio heads, longtime controllers of public perception, were desperate to keep such juicy details from leaking. With the complete support of the Astor family, including

unlimited access to the photographs and memorabilia of Mary Astor's estate, *The Purples Diaries* is a look at Hollywood's Golden Age as it has never been seen before, as Egan spins a wildly absorbing yarn about a scandal that threatened to bring down the dream factory known as Hollywood.

Beginning with the germ theory of disease in the 19th century and extending through most of the 20th century, microbes were believed to live their lives as solitary, unicellular, disease-causing organisms. This perception stemmed from the focus of most investigators on organisms that could be grown in the laboratory as cellular monocultures, often dispersed in liquid, and under ambient conditions of temperature, lighting, and humidity. Most such inquiries were designed to identify microbial pathogens by satisfying Koch's postulates.³ This pathogen-centric approach to the study of microorganisms produced a

metaphorical "war" against these microbial invaders waged with antibiotic therapies, while simultaneously obscuring the dynamic relationships that exist among and between host organisms and their associated microorganisms—only a tiny fraction of which act as pathogens. Despite their obvious importance, very little is actually known about the processes and factors that influence the assembly, function, and stability of microbial communities. Gaining this knowledge will require a seismic shift away from the study of individual microbes in isolation to inquiries into the nature of diverse and often complex microbial communities, the forces that shape them, and their relationships with other communities and organisms, including their multicellular hosts. On March 6 and 7, 2012, the Institute of Medicine's (IOM's) Forum on Microbial Threats hosted a public workshop to explore the emerging science of the "social biology" of microbial communities. Workshop presentations and discussions embraced a wide spectrum of topics, experimental systems, and theoretical perspectives representative of the current, multifaceted exploration of the microbial frontier. Participants discussed ecological, evolutionary, and genetic factors contributing to the assembly, function, and stability of microbial communities; how microbial communities adapt and respond to environmental stimuli; theoretical and experimental approaches to advance this nascent field; and potential applications

of knowledge gained from the study of microbial communities for the improvement of human, animal, plant, and ecosystem health and toward a deeper understanding of microbial diversity and evolution. Innovation is about change, and media products and services are changing. The processes of production and distribution of media are changing. The ownership and financing of media are changing. The roles of users are changing. And our ideas about media are changing. This book argues that innovation theory provides better tools for media researchers who wish to understand and explain current developments in the media landscape ? tools that not only allow them to see completely new things, but also to investigate aspects of new media that would otherwise not be as accessible. The various chapters of the book present selected studies that together illustrate how a more explicit focus on innovation and innovation theory can provide new insights into and generates knowledge about how media innovations develop, the sociocultural conditions of such innovations, the role of technology, and power relations in media developments.
