Privatization in Latin America Alberto Chong, Florencio Lopez de Silanes, 2005-03-15 Privatization is under attack.

Beginning in the 1980s, thousands of failing state-owned enterprises worldwide have been turned over to the private sector. But public opinion has turned against privatization. A large political backlash has been brewing for some time, infused by accusations of corruption, abuse of market power, and neglect of the poor. What is the real record of privatization and are the criticisms justified? 'Privatization in Latin America' evaluates the empirical evidence on privatization in a region that has witnessed an extensive decline in the state's share of production over the past 20 years. The book is a compilation of recent studies that provide a comprehensive analysis of the record of and accusations against privatization, with important recommendations for the future. Seven countries are investigated: Argentina, Bolivia, Brazil, Chile, Colombia, Mexico, and Peru. This book will be vital to anyone interested in the privatization debate but especially to those involved in civil service reform, corporate governance, economic policy, finance, and anticorruption efforts. 'Privatization is important but controversial. While economists typically favor it, others are skeptical. This book provides strong scientific evidence that privatization has been beneficial for many Latin American countries, although some privatizations failed and some groups in society lost out. As usual, the devil is in the details: how privatization is carried out and what reforms accompany it are crucial to its success. The book is definitely an invaluable contribution to the privatization debate.' --Oliver Hart, Andrew E. Furer Professor of Economics, Harvard University

Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Future Options for Management in the Nation's Subsurface Remediation Effort,2013-02-27 Across the United States, thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards. These include Superfund sites and other facilities that handle and dispose of hazardous waste, active and inactive dry cleaners, and leaking underground storage tanks; many are at federal facilities such as military installations. While many sites have been closed over the past 30 years through cleanup programs run by the U.S. Department of Defense, the U.S. EPA, and other state and federal agencies, the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve drinking water standards in the affected groundwater. Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites estimates that at least 126,000 sites across the U.S. still have contaminated groundwater, and their closure is expected to cost at least \$110 billion to \$127 billion. About 10 percent of these sites are considered complex, meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations. At sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts, the report recommends evaluating whether the sites should transition to long-term management, where risks would be monitored and harmful exposures prevented, but at reduced costs.

Water Reuse Chris Binnie,Martin Kimber,2008-05-14 Water Reuse: An International Survey of current practice, issues and needs examines water reuse practices around the world from different perspectives. The objective is to show how

differently wastewater reuse is conceived and practised around the world as well as to present the varied needs and possibilities for reusing wastewater. In the first section water reuse practices around the world are described for regions having common water availability, reuse needs and social aspects. The second section refers to the “stakeholders” point of view. Each reuse purpose demands different water quality, not only to protect health and the environment but also to fulfil the requirements of the specific reuse. Reuses considered are agricultural, urban agriculture as a special case of the former, municipal and industrial. Alongside these uses, the indirect reuse for human consumption through aquifer recharge is also discussed. The third section deals with emerging and controversial topics. Ethical and economical dilemmas in the field are presented as a subject not frequently addressed in this field. The role of governments in respect of public policy in reuse is discussed as well as the different international criteria and standards for reusing wastewater. The importance of public acceptance and the way to properly handle it is also considered. The fourth section of the book presents contrasting case studies; typical situations in the developed world (Japan and Germany) are compared to those in developing countries (Pakistan and Brazil) for agricultural and industrial reuse. Indirect planned reuse for human consumption (Germany) is compared with an unplanned one (Mexico). The Windhoek, Namibia case study is presented to emphasize why if the direct reuse of wastewater for human consumption has been performed with success for more than 35 years it is still the only example of this type around the world. To illustrate the difficulties of having a common framework for regulating water reuse in several countries, the Mediterranean situation is described. Other case studies presented refer to the reuse situation in Israel, Spain, Cameroon, Nepal and Vietnam, these latter countries being located in water rich areas. This book will be an invaluable information source for all those concerned with water reuse including water utility managers, wastewater policy makers and water resources planners as well as researchers and students in environmental engineering, water resources planning and sanitary engineering. Decentralised Energy Christoph Burger, Antony Froggatt, Catherine Mitchell, Jens Weinmann, 2020-01-14 The energy system is undergoing a fundamental transformation - from fossil to renewable energy, from central power plants to distributed, decentralised generation facilities such as rooftop solar panels or wind parks, from utilities to private residents as producers of energy, and from analogue to digital. This book looks at the energy transformation from two complementary angles: governance and business model innovation. On the one side, governance is a decisive factor for the success of the transformation because it can act as an accelerator, or it can delay the process. On the other side, entrepreneurs and corporate decision-makers provide new business models for a decentralised energy world. Based on best practices, country studies and interviews with CEOs and founders of startups from all over the world, the "Global Game Changer" suggests eight key principles for political decision-makers to successfully implement the transformation, and six core competencies for corporate decision-makers to thrive in the new marketplace.
