

Team T Rex Book 14 Frankies Magic Football

Sixty-five million years ago, a comet or asteroid larger than Mt. Everest slammed into the Earth, causing an explosion equivalent to the detonation of a hundred million hydrogen bombs. Vaporized impactor and debris from the impact site were blasted out through the atmosphere, falling back to Earth all around the globe. Terrible environmental disasters ensued, including a giant tsunami, continent-scale wildfires, darkness, and cold, followed by sweltering greenhouse heat. When conditions returned to normal, half the genera of plants and animals on Earth had perished. This horrific story is now widely accepted as the solution to a great scientific murder mystery: what caused the extinction of the dinosaurs? In *T. rex and the Crater of Doom*, the story of the scientific detective work that went into solving the mystery is told by geologist Walter Alvarez, one of the four Berkeley scientists who discovered the first evidence for the giant impact. It is a saga of high adventure in remote parts of the world, of patient data collection, of lonely intellectual struggle, of long periods of frustration ended by sudden breakthroughs, of intense public debate, of friendships made or lost, of the exhilaration of discovery, and of delight as a fascinating story unfolded. Controversial and widely attacked during the 1980s, the impact theory received confirmation from the discovery of the giant impact crater it predicted, buried deep beneath younger strata at the north coast of the Yucatán Peninsula. The Chicxulub Crater was found by Mexican geologists in 1950 but remained almost unknown to scientists elsewhere until 1991, when it was recognized as the largest impact crater on this planet, dating precisely from the time of the great extinction sixty-five million years ago. Geology and paleontology, sciences that long held that all changes in Earth history have been calm and gradual, have now been forced to recognize the critical role played by rare but devastating catastrophes like the impact that killed the dinosaurs.

? Sports and competition have been film subjects since the dawn of the medium. Olympic sports documentaries have been around nearly as long as the games themselves; films about surfing, boxing, roller derby, motorcycle racing and bodybuilding were theatrical successes during the 1960s and 1970s. The author surveys the history of the sports documentary subgenre, covering more than 100 award-winning films of 40+ different competitions, from traditional team sports to dogsled racing to ballroom dancing.

Team T-Rex Hodder Children's Books

Terence the T-Rex: How to Deal with Bullies is a book that addresses the issue of bullying for being different. The story focuses on the main character, Terence, as he is made fun of by Buck the brontosaurus because he is not able to do everything that Buck is able to do. Both kids and adults seem to be able to relate to this book and hopefully can laugh. This is not a fun loving book intended for children, but is done in a similar style and humor as other books like *All of my Friends are Dead*, *The Stinky Cheese Man*, as well as others. Children will be able to relate to the book because it was drawn like how a child would draw. If you get this book for your child because they are actually dealing with bullying I would not recommend it. This book is a book that is meant to make you laugh while dealing with the real issues of bullying and how sometimes enough is enough.

Do you need a book to calm "wild child days and ways" in your household, office, or classroom?
